1. Should the ESG Guide be a recommended best practice appended to the Listing Rules?

Yes

No

If your answer is “No”, please give reasons and alternative views.

HKEX should set a timeline for moving from voluntary to “comply or explain” in 2 to 3 years, to allow sufficient time to get ready. HK performs poorly compared to companies on other exchanges, and the world is moving fast and they may get further behind – see what other exchanges are doing e.g. Australian Asian Sustainability Rating.

Within these 2 to 3 years, Singapore has given us a good reference of what can be undertaken as an interim measure. It has recently made a noteworthy step in the area of mandatory corporate energy and greenhouse gas emissions measurement. Two separate new legislations (energy and waste) will be introduced and come into effect in 2013 and 2014 respectively. These laws will be effective to complement the voluntary guidelines on sustainability reporting. The law will require big energy consumers to annually report their energy use and GHG emissions.

2. Do you agree with the proposed Main Board Listing Rule 13.91 and paragraph 53 of Appendix 16/ GEM Listing Rules 17.103 and 18.84 in Appendix I of the Consultation Paper?

Yes

No

If your answer is “No”, please give reasons and alternative views.

Refer to the above.

Content of the proposed Environmental, Social and Governance Reporting Guide

Introduction

3. Do you agree with the Introduction section?

The proposed Introduction section states:

1. This guide sets out Environmental, Social and Governance (“ESG”) subject areas, aspects, general disclosure and key performance indicators (“KPIs”).
2. This guide is not comprehensive. We encourage an issuer to identify and disclose additional ESG issues and KPIs that are relevant to its business. It may also refer to existing international ESG reporting guidance for its relevant industry or sector.
3. An issuer may adopt a higher level of ESG reporting based on international guidance and standards.
4. An issuer may disclose the ESG information in its annual report regarding the same period covered in the annual report, or in a separate report, in print or on its website. Where the information is included in a separate report, an issuer is free to report on any period.
5. It is important to involve the board of directors in preparing the ESG report. The board of directors is responsible for ESG reporting but it may delegate the task of compiling the ESG report to its employees or a committee that reports to the board.

Yes

No

If your answer is “No”, please give reasons and alternative views.

Companies should set themselves targets in KPIs, and monitor against them in each ESG report.

This guideline should give directives in what type of issuers are particular relevant to the ESG reporting. These issuers should then give this reporting a higher priority. One example we take reference from another exchange is listed below.

Who to report?

- Those issuers operate in industries that are susceptible to environmental risks, e.g. oil & gas, mining & metals, raw material processing;
- Those issuers operate in industries that produce significant environmental pollutants, e.g. chemical & apparel industries;
- Those issuers who are heavy users of natural resources, e.g. palm oil producers, forestry companies; and
- Those issuers who are part of a supply chain where end customers demand that suppliers behave responsibly.

General Approach

4. Do you agree with the guidance under the General Approach section?

The proposed General Approach section states:

Identify subject areas, aspects and indicators that are relevant

8. Not all ESG subject areas, aspects and KPIs in this Guide may be relevant to an issuer's business. Also, some may be more important to an issuer's business than others. For example, product responsibility, an ESG aspect, may be important to a retailer.
9. The ESG report could prioritise ESG subject areas, aspects and KPIs that are material in the context of its corporate strategy, which could be given prominence in the report.
10. It is unnecessary to report on all subject areas, aspects and KPIs. An issuer could identify and report on relevant ESG subject areas, aspects and KPIs that have material environmental and social impacts. Materiality can be addressed in strategic, operational and financial terms.

Engage stakeholders

11. It is important to engage stakeholders to identify material aspects and KPIs and understand their views. Stakeholders are parties that have interests in or are affected by the decisions and activities of an issuer. They may include shareholders (including independent shareholders), business partners, employees, suppliers, sub-contractors, consumers, regulators and the public.
12. The ESG report could disclose the issuer's stakeholders and the basis for their identification. It may also disclose the activities the issuer has arranged to engage stakeholders, the objectives and how it has responded to stakeholders' views. Stakeholder engagement may be conducted through meetings (e.g. personal or annual general meetings), conferences, workshops, advisory committees, round-table discussions, focus groups, questionnaires, web-based forums and written consultations.
13. The ESG report may also disclose a mechanism for stakeholders to provide feedback.

Yes

No

If your answer is "No", please give reasons and alternative views.

Issuers should be encouraged to adopt industry-specific reporting frameworks, e.g. the framework promulgated by the International Council on Mining & Metals for the mining and metal industry, or Global Reporting Initiative Sector Supplements for selected industries.

Reporting guidance

5. Do you agree with the guidance under the Reporting Guidance section?

The proposed Reporting Guidance section states:

Scope of reporting

14. The ESG report could state which entities in the group and/or which operations have been included for the report. If there is change in the scope, the issuer could explain the difference and reason for change.

Approaches to reporting

15. Once an issuer starts reporting, it could continue to do so regularly. The aspects and KPIs reported could be consistent for each period or there could be an explanation of the changes. An issuer may also explain why some aspects and KPIs are not reported.
16. An ESG report could state the issuer's ESG management approach, strategies, priorities, objectives and explain how they relate to its business. It could discuss the issuer's management, measurement and monitoring system to implement its ESG strategies.
17. An ESG report could also discuss ESG opportunities, risks, challenges and how they are addressed. For example, a telecommunication company may see an opportunity to promote teleconferencing as an alternative to travel due to climate change concerns. An information and technology company may see the damage to its reputation from a breach in consumer privacy as an ESG risk.

Reporting on line items

18. The Guide does not provide a definition for each KPI. An issuer could explain how the KPIs are calculated and include information that is necessary for interpreting the KPIs. It may use the same definition and calculation method each period for comparison over time. If there is a change to the definition or calculation method, the issuer could explain the difference and reason for the change.
19. Over time, an issuer may present time series of data for comparison over a period already reported on. The time period used may be consistent for every report.
20. An issuer may report line items with objective and representative industry benchmarks.
21. Quantitative information could be presented in a table format.

Yes

No

If your answer is "No", please give reasons and alternative views.

The reporting company should state explicitly its corporate-level management policy on environmental stewardship, human and capital resources allocated on managing environmental impacts.

Regarding those sustainability issues to be reported in the ESG reports, the Exchange should encourage issuers to consider and provide disclosure to what particular types of issues. One example that I borrow from another exchange is listed below as reference.

What to report?

- Relevant laws, regulations, international agreements, or voluntary agreements with strategic significance to the organization and its stakeholders, including fines, sanctions, prosecution, and accidents for non-compliance with environmental laws and regulations;
- Sustainability policy;
- Risk management policies and processes arising from environmental and social concerns;
- Main topics of interest and future challenges for the specific industry sector which the issuer operate in as observed by peers and competitors; and
- Assessment of sustainability impacts, risks, or opportunities.

However, the above factors are not exhaustive and issuers will have to take into account unique industry concerns, risks, and company specific characteristics in determining relevant ESG disclosure.

Yes

No

If your answer is “No”, please give reasons and alternative views.

42. Do you agree to include KPI B3.2: “Paper use efficiency initiatives and results achieved”?

Yes

No

If your answer is “No”, please give reasons and alternative views.

Yes

No

If your answer is “No”, please give reasons and alternative views.

KPI B3.3 is rather vague and very broad. Suggest breaking it down into different categories, e.g. different categories using renewable natural resources such as seafood, cotton, soy and other food types. For seafood sustainable sourcing is the primary issue, for food generally it may be minimizing waste as the target.

Assurance

64. Do you agree that we should not recommend that issuers to seek external assurance for issuers that report on ESG performance?

Yes

No

If your answer is “No”, please give reasons and alternative views.

Issuers who have prepared ESG reports should engage external assurance providers to conduct independent verification of the reports. Assurance on an ESG report increases the credibility of the report by confirming whether the information is accurate. Assurance also acts as an important feedback mechanism to issuers in improving the quality of their ESG reports.
