## Client Margining Methodology

## Introduction

This document is the guideline for the calculation of the client margin requirement due from a client to an Exchange Participant or from a Non-Clearing Participant ("NCP") to its General Clearing Participant ("GCP") (i.e. Client Margin). Terms used in this document bear the same meanings as in PRiME Margining Guide.

## Part 1. Client Margin Calculation Algorithm

This part explains how the margin requirements are calculated. Please refer to PRiME Margining Guide for different components in arriving at the final margin requirement.

## Part 2. Examples

This part contains examples to illustrate the steps in calculating the margin requirement as stated in Part 1.

## Part 1. Client Margin Calculation Algorithm

### 1.1 Client Total Margin Requirement for Net Margining

1. Calculate Risk Margin of each Combined Commodity by multiplying the Risk Margin in 2.9 in PRiME Margining Guide by Client Margin Multiplier. The value of this multiplier is specified by clearing house from time to time.
2. Check to see if all of the positions for this Combined Commodity are solely long puts and/or long calls. If so, and if this result is greater than the Long Option Value, reduce this result to the Long Option Value.
3. Repeat steps 1 through 2 for all the Combined Commodity in the portfolio.
4. Group the result in step 3 by Currency of the Contract.
5. For HKCC's futures and futures-style options, Total Margin Requirement in each Currency of the Contract
$=\sum$ Result from step 4 of that Currency of the Contract
6. For SEOCH's premium-style options,
A. Calculate the Mark-to-Market Margin (i.e. total option value) of that Currency of the Contract
$=\sum$ Short Option Value of that Currency of the Contract $-\sum$ Long Option Value of that Currency of the Contract
B. Calculate the Total Margin Requirement in each Currency of the Contract
$=\sum$ Result from step 4 of that Currency of the Contract + Mark-to-Market Margin of that Currency of the Contract
C. Check to see if there is a margin credit (negative Total Margin Requirement) in one Currency of the Contract and a margin debit (positive Total Margin Requirement) in other Currency of the Contract. If so, apply the margin credit to offset the margin debit. Before the offset, convert the margin credit into the currency (conversion rate will be determined by the clearing house from time to time) in which the margin debit is denominated.
D. If step $C$ results in margin debit(s), the margin debit(s) will become the Total Margin Requirement. If step $C$ results in margin credit(s), the margin credit will be set to zero and there will be no Total Margin Requirement.

### 1.2 Client Total Margin Requirement for Gross Margining

1. Calculate Scan Risk for each of the contract.
2. Calculate Spot Month Charge for each of the applicable contract.
3. Take the maximum of result from the sum of steps 1 and 2, and the Short Option Minimum Charge for the contract.
4. Calculate Risk Margin by multiplying the sum of result in step 3 by Combined Commodity by Client Margin Multiplier. The value of this multiplier is specified by clearing house from time to time.
5. Check to see if all of the positions for this Combined Commodity are solely long puts and/or long calls. If so, and if the result in step 4 is greater than the Long Option Value, reduce this result to the Long Option Value. (This step is not applicable to SEOCH's premium-style options, as long positions in gross margined account of SEOCH will be treated as non-marginable positions for margin calculation purpose.)
6. Repeat steps 1 through 5 for all the Combined Commodities in the portfolio.
7. Group the result in step 6 by Currency of the Contract
8. Add up the result in step 7.

For HKCC's futures and futures-style options, Total Margin Requirement in each Currency of the Contract
$=\sum$ Result from step 7 of that Currency of the Contract

For SEOCH's premium-style options, Total Margin Requirement in each Currency of the Contract
$=\sum$ Result from step 7 of that Currency of the Contract + Mark-to-Market Margin of that Currency of the Contract

## Part 2. Examples

### 2.1 HKCC Products

## Portfolio A under Net Margining

Long 1 MAY HSI Futures
Short 4 JUN Mini-HSI Futures

HSI and Mini-HSI contracts are grouped into the same Combined Commodity. Delta Scaling Factor for HSI is 1.0 and mini-HSI is 0.2 .

## 1. Scan Risk

## Risk Arrays:

| Line | +1 MAY HSI Futures | -4 JUN Mini-HSI Futures | Total |
| :--- | :---: | :---: | :---: |
|  | P/L | P/L | P/L $(\$)$ |
| 1 | 0 | 0 | 0 |
| 2 | 0 | 0 | 0 |
| 3 | $-10,000$ | $+8,000$ | $-2,000$ |
| 4 | $-10,000$ | $+8,000$ | $-2,000$ |
| 5 | $+10,000$ | $-8,000$ | $+2,000$ |
| 6 | $+10,000$ | $-8,000$ | $+2,000$ |
| 7 | $-20,000$ | $+16,000$ | $-4,000$ |
| 8 | $-20,000$ | $+16,000$ | $-4,000$ |
| 9 | $+20,000$ | $-16,000$ | $+4,000$ |
| 10 | $+20,000$ | $-16,000$ | $+4,000$ |
| 11 | $-30,000$ | $+24,000$ | $-6,000$ |
| 12 | $-30,000$ | $+24,000$ | $-6,000$ |
| 13 | $+30,000$ | $-24,000$ | $+\mathbf{+ 6 , 0 0 0}$ |
| 14 | $+30,000$ | $-24,000$ | $+\mathbf{+ 6 , 0 0 0}$ |
| 15 | $-21,000$ | $+16,800$ | $-4,200$ |
| 16 | $+21,000$ | $-16,800$ | $+4,200$ |
| 17 | +1.00 | -4.00 |  |
|  |  |  |  |

## 2. Intracommodity Spread Charge

Composite Delta for HSI Futures: +1
Composite Delta for Mini-HSI Futures: +1
The Composite Delta after adjusted by the Delta Scaling Factor:
Long 1 MAY HSI Futures $=+1 \times 1 \times 1.0=+1$
Short 4 JUN Mini-HSI Futures $=+1 \times(-4) \times 0.2=-0.8$
0.8 Intracommodity Spread can be formed
$\Rightarrow$ Intracommodity Spread Charge $=0.8 \times \$ 7,500=\$ 6,000$

## 3. Client Total Margin Requirement

Client Total Margin Requirement
$=\quad$ Max (Commodity Risk, Short Option Minimum Charge) x Client Margin Multiplier
$=\quad$ Max (Scan Risk + Intracommodity Spread Charge, 0) x Client Margin Multiplier
$=\quad \operatorname{Max}(6,000+6,000,0) \times 1.33^{*}$
$=\quad$ HKD15,960
*The Client Margin Multiplier is assumed to be 1.33 and the same in the following examples.

## Portfolio A under Gross Margining

Long 1 MAY HSI Futures
Short 4 JUN Mini-HSI Futures

## 1. Scan Risk

## Risk Arrays:

| Line | +1 MAY HSI Futures <br>  <br>  <br> P/L | -4 JUN Mini-HSI Futures |
| :--- | :---: | :---: |
| P/L |  |  |$|$| -1 | 0 | 0 |
| :--- | :---: | :---: |
| 2 | $-10,000$ | $+8,000$ |
| 3 | $-10,000$ | $+8,000$ |
| 4 | $+10,000$ | $-8,000$ |
| 5 | $+10,000$ | -8.000 |
| 6 | $-20,000$ | $+16,000$ |
| 7 | $-20,000$ | $+16,000$ |
| 8 | $+20,000$ | $-16,000$ |
| 9 | $+20,000$ | $-16,000$ |
| 10 | $-30,000$ | $+24,000$ |
| 11 | $-30,000$ | $+24,000$ |
| 12 | $+30,000$ | $-24,000$ |
| 13 | $+\mathbf{3 0 , 0 0 0}$ | $-24,000$ |
| 14 | $-21,000$ | $+16,800$ |
| 15 | $+21,000$ | $-16,800$ |
| 16 | +1.00 | -4.00 |

## Scan Risk

$\Rightarrow$ Long 1 MAY HSI Futures: 30,000
$\Rightarrow$ Short 4 JUN Mini-HSI Futures: 24,000

## 2. Client Total Margin Requirement

```
Client Total Margin Requirement
\(=\quad \sum[\) Max (Scan Risk, Short Option Minimum Charge) for each contract in HSI \(] \times\) Client
        Margin Multiplier
\(=\quad[\operatorname{Max}(30,000,0)+\operatorname{Max}(24,000,0)] \times 1.33\)
\(=\quad \$ 71,820\)
```

## Portfolio B under Net Margining

Long 1 MAY HSI Futures
Short 2 JUN HSI 10,000 Call Options

## 1. Scan Risk

## Risk Arrays:

| Line | +1 MAY HSI Futures <br> P/L | -2 JUN HSI 10,000 Call <br> P/L | Total <br> P/L (\$) |
| :--- | :---: | :---: | :---: |

| 2 | 0 | $-4,337$ | $-4,337$ |
| 3 | $-10,000$ | $+5,555$ | $-4,445$ |
| 4 | $-10,000$ | $+7,054$ | $-2,946$ |
| 5 | $+10,000$ | $-5,166$ | $+4,834$ |
| 6 | $+10,000$ | $-13,488$ | $-3,488$ |
| 7 | $-20,000$ | $+28,404$ | $+8,404$ |
| 8 | $-20,000$ | $+20,539$ | +539 |
| 9 | $+20,000$ | $-12,939$ | $+7,061$ |
| 10 | $+20,000$ | $-20,422$ | -422 |
| 11 | $-30,000$ | $+42,735$ | $+\mathbf{1 2 , 7 3 5}$ |
| 12 | $-30,000$ | $+35,842$ | $+5,842$ |
| 13 | $+30,000$ | $-19,057$ | $+10,943$ |
| 14 | $+30,000$ | $-25,338$ | $+4,662$ |
| 15 | $-21,000$ | $+31,745$ | $+10,745$ |
| 16 | $+21,000$ | $-10,717$ | $+10,283$ |
| 17 | $+1,00$ | -1.04 |  |

$\Rightarrow$ Scan Risk $=\mathbf{\$ 1 2 , 7 3 5}$

## 2. Intracommodity Spread Charge

Composite Delta for 1 HSI Futures: +1
Composite Delta for 1 10,000 HSI Call Options: +0.52
The Composite Delta after adjusted by Delta Scaling Factor
Long 1 MAY HSI Futures $=+1 \times 1=+1$
Short 2 JUN HSI Call Options $=+0.52 \times(-2)=-1.04$
i.e. One Intracommodity Spread can be formed
$\Rightarrow$ Intracommodity Spread Charge $=1 \times \$ 7,500=\$ 7,500$
3. Short Option Minimum Charge

Short Option Minimum $=\$ 6,000 \times 2=\$ 12,000$

## 4. Client Total Margin Requirement

> Client Total Margin Requirement $=\quad$ Max [Commodity Risk, Short Option Minimum Charge] x Client Margin Multiplier $=\quad \begin{aligned} & \text { Max [Scan Risk + Intracommodity Spread Charge, Short Option Minimum Charge] x Client } \\ & \\ & \text { Margin Multiplier } \\ & =\end{aligned} \quad \begin{aligned} & \text { Max }[12,735+7,500,12,000] \times 1.33 \\ & =\end{aligned} \$ 26,913$

## Portfolio B under Gross Margining

Long 1 MAY HSI Futures
Short 2 JUN HSI 10,000 Call Options

## 1. Scan Risk

Risk Arrays:

| Line | +1 MAY HSI Futures <br>  <br> P/L | -2 JUN HSI 10,000 Call |
| :--- | :---: | :---: |
| 1 | 0 | P/L |
| 2 | 0 | $+4,336$ |
| 3 | $-10,000$ | $+4,337$ |
| 4 | $-10,000$ | $+7,555$ |
| 5 | $+10,000$ | $-5,054$ |
| 6 | $+10,000$ | $-13,488$ |
| 7 | $-20,000$ | $+28,404$ |
| 8 | $-20,000$ | $+20,539$ |
| 9 | $+20,000$ | $-12,939$ |
| 10 | $+20,000$ | $-20,422$ |
| 11 | $-30,000$ | $\mathbf{+ 4 2 , 7 3 5}$ |
| 12 | $-30,000$ | $+35,842$ |
| 13 | $+30,000$ | $-19,057$ |
| 14 | $+30,000$ | $-25,338$ |
| 15 | $-21,000$ | $+31,745$ |
| 16 | $+21,000$ | $-10,717$ |
| 17 | +1.00 | -1.04 |

## Scan Risk

$\Rightarrow$ Long 1 MAY HSI Futures: 30,000
$\Rightarrow$ Short 2 JUN HSI 10,000 Call Options: 42,735

## 2. Client Total Margin Requirement

Client Total Margin Requirement

$$
\begin{array}{ll}
= & \sum[\text { Max }(\text { Scan Risk, Short Option Minimum Charge }) \text { for each contract in HSI }] \times \text { Client } \\
& \text { Margin Multiplier } \\
= & {[\operatorname{Max}(30,000,0)+\operatorname{Max}(42,735,2 \times 6,000)] \times 1.33} \\
= & \$ 96,738
\end{array}
$$

## Portfolio C under Net Margining

Long 2 MAR CNH Futures (applicable to Spot Month Charge)
Short 1 APR CNH Futures

## 1. Scan Risk

## Risk Arrays:

| Line | +2 MAR CNH Futures | -1 APR CNH Futures |  |
| :--- | :---: | :---: | :---: |
|  | P/L | Total <br> P/L | P/RB $)$ |
| 1 | 0 | 0 | 0 |
| 2 | 0 | 0 | 0 |
| 3 | $-4,000$ | $+2,000$ | $-2,000$ |
| 4 | $-4,000$ | $+2,000$ | $-2,000$ |
| 5 | $+4,000$ | $-2,000$ | $+2,000$ |
| 6 | $+4,000$ | $-2,000$ | $+2,000$ |
| 7 | $-8,000$ | $+4,000$ | $-4,000$ |
| 8 | $-8,000$ | $+4,000$ | $-4,000$ |
| 9 | $+8,000$ | $-4,000$ | $+4,000$ |
| 10 | $+8,000$ | $-4,000$ | $+4,000$ |
| 11 | $-12,000$ | $+6,000$ | $-6,000$ |
| 12 | $-12,000$ | $+6,000$ | $-6,000$ |
| 13 | $+12,000$ | $-6,000$ | $\mathbf{+ 6 , 0 0 0}$ |
| 14 | $+12,000$ | $-6,000$ | $\mathbf{+ 6 , 0 0 0}$ |
| 15 | $-10,800$ | $+5,400$ | $-5,400$ |
| 16 | $+10,800$ | $-5,400$ | $+5,400$ |
| 17 | +2.00 | -1.00 |  |

$\Rightarrow$ Scan Risk $=$ RMB 6,000

## 2. Intracommodity Spread Charge

Composite Delta for Long 2 MAR CNH Futures $=+1 \times 2=+2$
Composite Delta for Short 1 APR CNH Futures $=+1 \times(-1)=-1$
1 Intracommodity Spread can be formed
$\Rightarrow$ Intracommodity Spread Charge $=1 \times$ RMB 3,600 $=$ RMB 3,600

## 3. Spot Month Charge

Delta of spot month contract consumed by Intracommodity Spread $=1$
Delta of spot month contract remaining in outrights $=1$
$\Rightarrow$ Spot Month Charge
= (Delta consumed by spread x Spot Month Charge per Delta consumed by spread)

+ (Delta remaining in outrights x Spot Month Charge per Delta remaining in outrights)
$=\operatorname{RMB}(1 \times 1,200+1 \times 1,200)=$ RMB 2,400

## 4. Client Total Margin Requirement

## Client Total Margin Requirement

$=\quad$ Max (Commodity Risk, Short Option Minimum Charge) x Client Margin Multiplier
$=\quad$ Max $($ Scan Risk + Intracommodity Spread Charge + Spot Month Charge, 0) x Client Margin Multiplier
$=\quad \operatorname{Max}(6,000+3,600+2,400,0) \times 1.33$
$=\quad \operatorname{RMB} 15,960$

## Portfolio C under Gross Margining

Long 2 MAR CNH Futures (applicable to Spot Month Charge) Short 1 APR CNH Futures

## 1. Scan Risk

| 16 | $-107,400$ | 26,976 | $-80,424$ |
| 17 | -2.00 | +1.16 |  |

$\Rightarrow$ Scan Risk of AAA $=$ HKD47,278

## 2. Intracommodity Spread Charge

Composite Delta for AAA Futures: +1
Composite Delta for AAA 20000 Call: +0.58
The Composite Delta after adjustment by the Delta Scaling Factor:
Short 2 MAR AAA Futures $=+1 \times(-2) \times 1.0=-2.00$
Long 2 APR AAA 20000 Call $=+0.58 \times(+2) \times 1.0=+1.16$
1.16 Intracommodity Spread can be formed
$\Rightarrow$ Intracommodity Spread Charge $=1.16 \times$ HKD 7,500 $=$ HKD8, 700

## 3. Intercommodity Spread Credit

a. Number of Intercommodity Spread

| Intercommodity Spread <br> Priority ${ }^{\text {a }}$ | 2.BBB-AAA |
| :--- | :---: |$|$| Composite Delta ${ }^{\text {a }}$ available <br> to form Intercommodity Spread: | $+1 \times(+2) \times 1.0=+2.00$ |
| :---: | :---: |
| BBB | $+1 \times(-2) \times 1.0+0.58 \times(+2) \times 1.0=-0.84$ |
| AAA | $\operatorname{Min}(\|+2\| / 3,\|-0.84\| / 2)=0.4200$ |

Note:
a) As there are no delta from CAH and CAR in this portfolio, it is not possible to form the CAH-CAR spread.
b) The Composite Deltas are all adjusted by their Delta Scaling Factors.
b. Weighted Price Risk (WPR)

| Combined Commodity | BBB | AAA |
| :--- | :---: | :---: |
| Time Risk $=$ <br> (Scenario 1 Loss + Scenario 2 <br> Loss)/2 | $(0+0) / 2=$ <br> HKD 0 | $(-14,892+16,086) / 2=$ <br> HKD597.00 |
| Scan Risk Scenario | 13 | 12 |
| Paired Scenario | 14 | 11 |
| Price Risk $=$ <br> (Scan Risk Scenario Loss+ <br> Paired Scenario Loss)/2 - Time <br> Risk | $(79,500+79,500) / 2-0=$ <br> HKD 79,500.00 | $(47,278+23,946) / 2-597=$ <br> HKD 35,015.00 |
| Composite Delta | +2 | -0.84 |

| WPR $=$ | $79,500.00 /\|+2\|=$ | $35,015.00 /\|-0.84\|=$ |
| :--- | :--- | :---: |
| Price Risk/ $\mid$ Composite Delta $\mid$ | HKD 39,750.00 | HKD 41,684.52 |

c. Intercommodity Spread Credit

| Combined Commodity | BBB | AAA |
| :--- | :---: | :---: |
| WPR | HKD 39,750.00 | HKD 41,684.52 |
| Intercommodity Spread: |  |  |
| Priority 2. BBB-AAA |  |  |
| a) Number of Spread |  |  |

$\Rightarrow$ Scan Risk of $\mathbf{B B B}=\mathbf{H K D} 79,500$

## 2. Intercommodity Spread Credit

a. Number of Intercommodity Spread

Since the spread CAH-CAR is higher in priority, it will be formed first before CAR-BBB

| Intercommodity Spread Priority ${ }^{\text {a) }}$ | 1.CAH-CAR | 3.CAR-BBB |
| :---: | :---: | :---: |
| Composite Delta available to form Intercommodity Spread: |  |  |
| CAH | $+1 \times(+1) \times 1.0=+1$ |  |
| CAR | $+1 \times(-2) \times 1.0=-2$ | $-2-(-1)=-1^{\text {b }}$ |
| BBB |  | $+1 \times(+2) \times 1.0=+2$ |
| Number of Intercommodity Spread formed | $\begin{gathered} \operatorname{Min}(\|+1\| / 1,\|-2\| / 1) \\ =1 \end{gathered}$ | $\begin{gathered} \operatorname{Min}(\|-1\| / 4,\|+2\| / 5) \\ =0.25 \end{gathered}$ |

Note:
a. Since there is no delta from AAA, forming spread of BBB-AAA is not possible.
b. Available delta of CAR to form CAR-BBB spread is -1 instead of -2 as -1 delta has already been consumed by the CAH-CAR spread higher in priority. Available delta of CAR for CAR-BBB spread $=-2.00-$ Number of Intercommodity Spread formed in CAH-CAR x Delta per Spread of CAR in that CAH-CAR spread $=-2-(1 x-1)$.
b. Weighted Price Risk(WPR)

| Combined Commodity | CAH | CAR | BBB |

& =\quad \begin{array}{l}
\text { Max [Commodity Risk - Intercommodity Spread Credit, Short Option Minimum Charge] x } \\
\text { Client Margin Multiplier + Mark-to-Market Margin }
\end{array} \\
& =\quad \text { Max }(2,120-1,475,200) \times 1.33+1.80 \times 400 \\
& =\quad \\
& =\quad \text { RMB } 858+720 \\
& =
\end{aligned} \quad \text { RMB 1,578 } \quad .
$$

Since there is margin credit in HKD (i.e. negative Total Margin Requirement) and margin debit in RMB (i.e. positive Total Margin Requirement), the margin credit will be used to offset the margin debit. Before the offset, the margin credit will first be converted into the currency in which margin debit is denominated.

Assuming the Conversion rate for $\mathrm{HKD} / \mathrm{RMB}=0.8152$,
Client Total Margin Requirement after cross-currency margin credit offset

$$
\begin{aligned}
& =\quad \text { RMB } 1,365-\text { HKD } 424 \times 0.8152 \\
& =\quad \text { RMB } 1,019
\end{aligned}
$$
