# 1. INTRODUCTION

## 1.1 PURPOSE

The target readers of this document are the technical personnel of Market Data Vendors, End-Users, Application Service Providers ("ASPs") and Independent Software Vendors ("ISVs") of HKEX Orion Market Data Platform – Derivatives Market ("OMD-D").

This document specifies the Binary interface of the OMD-D.

This document is the Transmission Specification(s) of the relevant Datafeed(s) under your Market Data Vendor License Agreement, Market Data End-User License Agreement or Market Data Application Service Provider Licence Agreement ("License Agreement"). Please refer to Section 1.2 and Section 1.3 for the information applicable to the Datafeed(s) under your License Agreement.

HKEX endeavors to ensure the accuracy and reliability of the information provided in this interface specification, but takes no responsibility for any errors or omissions or for any losses arising from decisions, action, or inaction based on this information. The Licensee shall not use such interface specifications for any purpose other than as expressly permitted under the Licence Agreement. No part of this document may be copied, distributed, transmitted, transcribed, stored in a retrieval system, translated into any human or computer language, or disclosed to third parties without written permission.

## 1.2 READING GUIDE

The chapters following this introduction are:

|            |                                  |
|------------|----------------------------------|
| Chapter 2: | System Overview                  |
| Chapter 3: | Message Formats                  |
| Chapter 4: | Recovery                         |
| Chapter 5: | FullTick Order Book Management   |
| Chapter 6: | Aggregated Order Book Management |
| Chapter 7: | Auction Period Special Handling  |
| Chapter 8: | HKEX Derivatives Market          |

All chapters except Chapter 3 are applicable to all Datafeeds unless otherwise specified. In Chapter 3, there are indications\* in individual sections/sub-sections for their applicability to individual Datafeeds. Below is an example of the table along with explanations of what each of the datafeeds represent.

The information is also summarised in Section 1.3 Summary Table.

\* Example: Section 3.3 is applicable to D-Lite, DS, DP and DF datafeed.

| Section | Derivatives Lite<br>(D-Lite) | Derivatives Standard<br>(DS) | Derivatives Premium<br>(DP) | Derivatives FullTick<br>(DF) |
|---------|------------------------------|------------------------------|-----------------------------|------------------------------|
| 3.3     | ●                            | ●                            | ●                           | ●                            |

## 1.3 PRODUCTS

A range of products are provided catering for the varying needs of OMD clients. The products are described below.

Each of the 4 datafeeds described in this section are available by splitting into two separate sets of multicast group channels for the Stock Options Market and the Non-Stock Options Markets to better serve OMD clients on bandwidth consumption planning. Messages are applicable to datafeeds irrespective of whether it belongs to Stock Options Market

or non-Stock Options Markets. For the avoidance of doubt, Stock Options Market ("SOM") refer to the market for trading the stock option that is a financial contract based on a single underlying stock which is traded on SEHK and cleared through the SEHK Options Clearing House Limited (SEOCH). Non-Stock Options Markets ("Non-SOM") refer to the markets of trading HKEX derivatives products on HKFE. For the latest list of derivatives products on HKFE, please refer to the [HKEX website](#)."

### 1.3.1 Derivatives Lite ('D-Lite')

This is a conflated feed for Derivatives Market data which provides Level 2 book showing up to 5 aggregated price levels.

#### 1.3.1.1 Complimentary Feed to D-Lite – D-Lite Order Feed ('Order Feed')

Order Feed is a conflated feed providing all outstanding orders of VCM series every second and is offered complementarily to the D-Lite clients.

### 1.3.2 Derivatives Standard ('DS')

This is a conflated feed for Derivatives Market data which provides Level 2 book showing up to 10 aggregated price levels.

### 1.3.3 Derivatives Trades ('DT') – Complimentary Feed to DS and D-Lite

DT is a streaming trades feed with all Trade and Trade Amendments and is offered complementarily to the DS and D-Lite clients.

### 1.3.4 Derivatives Premium ('DP')

This is a streaming feed for Derivatives Market data which provides Level 2 book showing up to 10 aggregated price levels plus an aggregated 11th level showing total order volume beyond the 10th level. This datafeed also includes Trades and Trade Amendments. Please see note on trade and order handling.

### 1.3.5 Derivatives Fulltick ('DF')

This is a streaming feed containing the full order book and which includes individual orders, trades and trade amendments.

### 1.3.6 Summary Table

The products above are shown below – please note specific chapters that are relevant to the individual products.

- The information supplied in the corresponding sub-section applies to the Datafeed(s)
- ▲ Complimentary service to the Datafeed(s)

| Section | Message Formats    | Derivatives Lite (D-Lite) | Derivatives Standard (DS) | Derivatives Premium (DP) | Derivatives FullTick (DF) |

## 2. SYSTEM OVERVIEW

### 2.1 SCOPE

Figure 1: Access to Market Data

OMD provides market data represented in an efficient binary message format for all instruments traded on the Derivatives Market. It has been designed for high throughput and low latency.

#### 2.1.1 Multicast

Messages are published in a one-to-many fashion using the IP multicast and UDP transport protocols. Multicast is not a connection-oriented protocol. Data is sent strictly in one direction from server to clients.

#### 2.1.2 Dual Multicast Channels

Due to the inherently unreliable nature of the UDP transport, packets may be lost or delivered out-of-order. To mitigate the risk of packet loss, the messages are duplicated and sent over two separate multicast channels (dual channels). Technically, a multicast channel corresponds to a multicast group.

Each pair of dual multicast channels has a unique identifier, which is referred to as the ChannelID.

*More details regarding the configuration parameters (including IP addresses, port numbers corresponding to the multicast channels) will be found in a Connectivity Guide which will be provided at a later stage.*

#### 2.1.3 Recovery Mechanisms

OMD provides two recovery mechanisms:

- A retransmission server provides on request gap-fill retransmission of lost messages. The retransmission requests and gap-fill replies are point-to-point (TCP/IP connection).
- A refresh server provides snapshots of the market state at regular intervals throughout the business day. Snapshots are sent using multicast on separate channels for the real time messages.

## 2.2 SESSION MANAGEMENT

Each multicast channel maintains its own session. A session is limited to one business day. During this day the message sequence number is strictly increasing and therefore unique within the channel.

OMD-D does not operate on non-trading days of the Hong Kong Derivative Market where a trading day ends at the close of the after hour trading session. HKEX may perform system testing on Saturdays, Sundays or days when OMD-D is not in operation. Clients should treat data transmitted via OMD-D on those days as non production data and disregard them.

## 2.2.1 Start of Day

Housekeeping and system maintenance work may take place overnight until 6:00am. In this regard, Clients are advised to make connection to OMD Derivatives Market ("OMD-D") at or after 6:00am every business day to ensure that the data received from OMD-D are good for the start of the day. Please also refer to the OMD-D Developer's Guide for more information.

On each channel the first message at the start of the business day is the Sequence Reset message. The Sequence Reset message carries sequence number 1. On receipt of this message, the client must clear all cached data for all instruments.

The messages sent at start of day are:

- Commodity Definition, Class Definition, Series Definition Base, Series Definition Extend and Combination, messages for all tradeable series, including Combo Series
- Latest series quotation and trade snapshot.
- Latest market and series status snapshot
- Previous day open interest & settlement information for all tradeable series if available
- The latest Market message, COP

If a client starts listening after the start of business day and misses the Sequence Reset message and reference data, it must use the refresh service to recover and synchronize with the real time channels.

## 2.2.2 Normal Transmission

Normal message transmission is expected between when the market opens for trading and when the market is closed. Heartbeats are sent every at regular intervals (currently set at every 2 seconds) on each channel when there is no activity. This interval may be adjusted.

## 2.2.3 End of Day

OMD will typically shut down following the end of after hours trading and later shutdown is possible to cater for special circumstances. Shutdown time is not rigid and the Exchange has the right to adjust this time according to the different trading situations.

Clients should wait for a Market Status (320) message marking "99 - End of Business Day" before disconnecting.

## 2.2.4 Error Recovery

### 2.2.4.1 System Component Failure

In OMD, below contents are supplied by the component in an active-standby configuration. Both Line A and B are supplied by the same system component. If the system component fails and requires a failover, there will be a short interruption in multicast dissemination from **both** Line A and Line B.

Applicable datafeed(s) is marked with [●]

▲ Complimentary service to the Datafeed(s).

Below contents are supplied by the component in an active-active configuration. Line A and Line B are supplied by different system component independently and so line arbitration will allow the client to continue receiving messages – see section 4 for more information about recovery. If a system component fails and requires a failover, there will be a short interruption in multicast dissemination in **either** Line A or Line B

Applicable datafeed(s) is marked with [●]

▲ Complimentary service to the Datafeed(s).

### 2.2.4.2 Disaster Recovery

In the unlikely event of a disaster recovery situation at the primary site, OMD will be brought up at the disaster recovery (DR) site.

During the interruption, there might obly be heartbeat available or no data will be sent including heartbeats.

A Disaster Recovery (DR) Signal message indicating the DR status will also be sent on its dedicated channel when OMD is brought up – see section 3 for more information about the DR Signal message. *See Developers Guide for more details.*

IP addresses and ports that have been provided for the disaster site's retransmission service should be used. *See Connectivity Guide for more details.*

## 2.3 TRADING SESSIONS

In the Derivatives Market, there are Day Session ("T Session") and After-Hours Session ("AHT Session"). In terms of the trading session status, it is indicated by Market States detailed in section 8.1.

The market session status is at market code level and instrument group level. The market session status could be different across products with different market codes, especially during half day trading (Christmas eve, New Year eve, and Chinese New Year eve) and Holiday Trading where the trading arrangement is different among products.

Under severe weather and typhoon scenarios, there may be an impact on trading to suspend trading session. Even though, system connectivity on OMD-D will continue in service without impact.

## 2.4 RACE CONDITIONS

---

Due to the nature of the dissemination protocol the real time order/trade data and reference data are disseminated via separate channels so users need to be aware that there is a race condition.

As an example suppose a Market Status message is sent showing a change to state 'Closed', however for a very short time after this message the regular order and trade information for this series may continue to arrive.

## 3. MESSAGE FORMATS

### 3.1 DATA TYPES

*The information supplied in this section and its sub-sections applies to the Datafeed(s) marked with [●]*

| Section | Derivatives Lite (D-Lite) | Derivatives Standard (DS) | Derivatives Premium (DP) | Derivatives FullTick (DF) |
|---------|---------------------------|---------------------------|--------------------------|---------------------------|
| 3.1     | ●                         | ●                         | ●                        | ●                         |

The following table lists all the data types used by OMD.

| Format | Description                                                                                      |
|--------|--------------------------------------------------------------------------------------------------|
| String | ASCII characters which are left aligned and padded with spaces, unless otherwise specified.      |
| UInt8  | 8 bit unsigned integer.                                                                          |
| UInt16 | Little-Endian encoded 16 bit unsigned integer.                                                   |
| UInt32 | Little-Endian encoded 32 bit unsigned integer.                                                   |
| UInt64 | Little-Endian encoded 64 bit unsigned integer.                                                   |
| Int16  | Little-Endian encoded 16 bit signed integer.                                                     |
| Int32  | Little-Endian encoded 32 bit signed integer.                                                     |
| Int64  | Little-Endian encoded 64 bit signed integer.                                                     |
| Binary | Unicode encoding used for Chinese characters which are left aligned and padded with binary null. |

#### 3.1.1 Null Values

From time to time certain fields cannot be populated and specific values are used to represent null. This is currently used within Int32 fields of the Trade (350) message, the Aggregate Order Book Update (353) message, the Trade Statistics (360) message, the Series Statistics (363) message, the Calculated Opening Price (364) message, the Trade Amendment (356) message, the Open Interest (366) message as well as the Add / Modify Order messages.

| Format | Null representation (Hex 2's complement) |
|--------|------------------------------------------|
| Int32  | 0x80000000                               |
| Int64  | 0x8000000000000000                       |

#### 3.1.2 Currency Values

See the ISO-3166 Currency Codes for a full list of possible data values. Currently the system uses the following codes; 'HKD', 'USD', 'CNY'. HKEX may add or delete currency code(s), whenever applicable, in the future.

#### 3.1.3 Decimal Values

Decimal values are sent as integers. This is done for efficiency - for example, a price value sent as "12345" and with 3 decimal places should be interpreted as "12.345". See individual fields for number of decimal places used.

#### 3.1.4 Bitmap Values

Certain fields within the Add Order (330), Modify Order (331) and Trade (350) messages are bitmap representations which can denote a number of properties within a single field.

For example, with the 'DealType' field shown below, if a value of 3 is received this indicates that the trade is both "Printable" and a 'Occurred at Cross'.

| Offset | Field    | Format | Len | Description      | Values                                                                      |
|--------|----------|--------|-----|------------------|-----------------------------------------------------------------------------|
| 33     | DealType | UInt8  | 1   | Deal Type Bitmap | 0 None<br>1 Printable (see note)<br>2 Occurred at Cross<br>4 Reported Trade |

Note : The Printable property does not apply to Reported Trade. For other trades, i.e. trades matched by the trading system, it will be OFF for trades on Combo Series to avoid double counting of the trade quantity to market turnover.

## 3.2 PACKET STRUCTURE

*The information supplied in this section and its sub-sections applies to the Datafeed(s) marked with [●]*

| Section | Derivatives Lite (D-Lite) | Derivatives Standard (DS) | Derivatives Premium (DP) | Derivatives FullTick (DF) |
|---------|---------------------------|---------------------------|--------------------------|---------------------------|
| 3.2     | ●                         | ●                         | ●                        | ●                         |

Multicast packets are structured into a common packet header followed by zero or more messages. Messages within a packet are laid out sequentially, one after another without any spaces between them.

|               |           |           |     |           |
|---------------|-----------|-----------|-----|-----------|
| Packet Header | Message 1 | Message 2 | ... | Message n |
|---------------|-----------|-----------|-----|-----------|

The maximum length of a packet is 1500 bytes which includes the multicast headers, packet header and messages.

The packet header provides information including the total packet length, the number of messages within the packet, the sequence number of the first message and a send timestamp.

A packet will only ever contain complete messages. A single message will never be fragmented across packets. The format of each message within a packet will vary according to message type. However, regardless of the message type, each message will start with a two-byte message size (MsgSize) followed by a two-byte message type (MsgType). These are described in the following table.

**Table 1: MsgSize and MsgType Fields**

| Field   | Format | Len | Description                           |
|---------|--------|-----|---------------------------------------|
| MsgSize | UInt16 | 2   | Message length (including this field) |

| Field   | Format | Len | Description                             |
|---------|--------|-----|-----------------------------------------|
| MsgType | UInt16 | 2   | Type of message.                        |
|         |        |     | The valid values for MsgType are below: |
|         |        |     | 100 Sequence Reset                      |
|         |        |     | 101 Logon                               |
|         |        |     | 102 Logon Response                      |
|         |        |     | 201 Retransmission Request              |
|         |        |     | 202 Retransmission Response             |
|         |        |     | 203 Refresh Complete                    |
|         |        |     | 301 Commodity Definition                |
|         |        |     | 302 Class Definition                    |
|         |        |     | 303 Series Definition Base              |
|         |        |     | 304 Series Definition Extended          |
|         |        |     | 305 Combination Definition              |
|         |        |     | 320 Market Status                       |
|         |        |     | 321 Series Status                       |
|         |        |     | 322 Commodity Status                    |

### 3.3 PACKET HEADER

The information supplied in this section and its sub-sections applies to the Datafeed(s) marked with [●]

| Section | Derivatives Lite<br>(D-Lite) | Derivatives Standard<br>(DS) | Derivatives Premium<br>(DP) | Derivatives FullTick<br>(DF) |
|---------|------------------------------|------------------------------|-----------------------------|------------------------------|
| 3.3     | ●                            | ●                            | ●                           | ●                            |

All packets will begin with a common packet header.

| Offset        | Field            | Format | Len | Description                                                                                                                     |
|---------------|------------------|--------|-----|---------------------------------------------------------------------------------------------------------------------------------|
| 0             | PktSize          | UInt16 | 2   | Size of the packet (including this field)                                                                                       |
| 2             | MsgCount         | UInt8  | 1   | Number of messages included in the packet                                                                                       |
| 3             | Compression Mode | UInt8  | 1   | 0 indicates no compression applied on messages in the packet<br>1 indicates compression applied on messages in the packet       |
| 4             | SeqNum           | UInt32 | 4   | Sequence number of the first message in the packet                                                                              |
| 8             | SendTime         | UInt64 | 8   | UTC Timestamp. The number of nanoseconds since January 1, 1970, 00:00:00 GMT, precision is provided to the nearest millisecond. |
| Packet length |                  |        | 16  |                                                                                                                                 |

### 3.3.1 Compression on Payload Message

Compression is applied on specific real time and refresh channels in OMD-D. Messages delivered in the packet have applied RFC-1950 ZLIB data compression when the Compression Mode field in package header is set to 1. Clients should read the Compression Mode in every packet header and determine if decompression (i.e. RFC-1951 DEFLATE) is required to apply on the received payload messages (i.e. a cargo of all messages within the same packet) before processing the messages. Below are the reference of data compression and decompression method employed in OMD-D.

RFC-1950, ZLIB Compressed Data Format Specification version 3.3

RFC-1951, DEFLATE Compressed Data Format Specification version 1.3

## 3.4 CONTROL MESSAGES

*The information supplied in this section and its sub-sections applies to the Datafeed(s) marked with [●]*

| Section | Derivatives Lite (D-Lite) | Derivatives Standard (DS) | Derivatives Premium (DP) | Derivatives FullTick (DF) |
|---------|---------------------------|---------------------------|--------------------------|---------------------------|
| 3.4     | ●                         | ●                         | ●                        | ●                         |

### 3.4.1 Heartbeat

Heartbeats consist of a packet header with Compression Mode set to 0 and MsgCount set to 0. They do not carry a sequence number and therefore do not increment the sequence number of the multicast channel. SeqNum is set to the sequence number of the previous message sent on the channel.

The Heartbeat message will be identical for all the services.

### 3.4.2 Sequence Reset (100)

The Sequence Reset message is sent on each multicast channel at start of day. It may also be sent when there is a need for the rectification of stock reference data before market open.

The client must ignore the sequence number of the Sequence Reset message itself, and set the next expected sequence number to NewSeqNo. The client may receive multiple sequence reset messages from all channels. Whenever the Sequence Reset message is received, clients must clear all cached data for all instruments traded in the Derivatives Market and then subscribe to the refresh channels to receive the current state of the market.

#### Message Fields

| Offset       | Field    | Format | Len | Description          | Values             |
|--------------|----------|--------|-----|----------------------|--------------------|
| 0            | MsgSize  | UInt16 | 2   | Size of the message  |                    |
| 2            | MsgType  | UInt16 | 2   | Type of message.     | 100 Sequence Reset |
| 4            | NewSeqNo | UInt32 | 4   | New sequence number. | Always set to 1    |
| Total Length |          |        | 8   |                      |                    |

### 3.4.3 Disaster Recovery Signal (105)

The Disaster Recovery (DR) Signal message is sent on a dedicated multicast channel (DR channel) whenever a site failover scenario is triggered: (1) HKEX Primary Data Center failure that requires to bring up OMD-D at the Secondary Data Center, or (2) Derivatives Trading System (HKATS) failure that requires HKATS to be brought up at the Secondary Data Center. In normal situation, including OMD-D node failover, the dedicated DR channel only carries Heartbeat till end of business day.

When site failover begins, DR Signal is sent with "DRStatus=1" indicating that the DR process has been activated. Clients should then clear all cached market data and prepare their own system for the site failover. When the site failover process finishes, DR Signal will be sent with "DRStatus=2" thereupon clients could start rebuild the latest market image from the refresh service. The same DR Signal will be sent periodically until end of business day.

## Message Fields

| Offset       | Field    | Format | Len | Description                 | Values                                 |
|--------------|----------|--------|-----|-----------------------------|----------------------------------------|
| 0            | MsgSize  | UInt16 | 2   | Size of the message         |                                        |
| 2            | MsgType  | UInt16 | 2   | Type of message.            | 105 DR Message                         |
| 4            | DRStatus | UInt32 | 4   | Status during site failover | 1 – DR in progress<br>2 – DR completed |
| Total Length |          |        | 8   |                             |                                        |

## 3.5 RETRANSMISSION

*The information supplied in this section and its sub-sections applies to the Datafeed(s) marked with [●]*

| Section | Derivatives Lite (D-Lite) | Derivatives Standard (DS) | Derivatives Premium (DP) | Derivatives FullTick (DF) |
|---------|---------------------------|---------------------------|--------------------------|---------------------------|
| 3.5     | ●                         | ●                         | ●                        | ●                         |

Refer to Retransmission service for details on the retransmission messages.

Note that when the Logon (101) or Retransmission Request (201) messages are sent to the OMD server, the client must also include a packet header as shown below.

Also note that the same header is used by the RTS server when sending either Logon Response (102) or Retransmission Response (202) messages to clients. Again in this case the SeqNum and SendTime fields are not relevant and can be discarded.

| Offset       | Field            | Format | Len | Values | Notes                                                                                                                     |
|--------------|------------------|--------|-----|--------|---------------------------------------------------------------------------------------------------------------------------|
| 0            | PktSize          | UInt16 | 2   | 32     | 16 bytes for this header plus 16 bytes for either the Logon (101) or Retransmission Request (201) message                 |
| 2            | MsgCount         | UInt8  | 1   | 1      | One message only                                                                                                          |
| 3            | Compression Mode | UInt8  | 1   |        | 0 indicates no compression applied on messages in the packet<br>1 indicates compression applied on messages in the packet |
| 4            | SeqNum           | UInt32 | 4   | 0      | This field is not used                                                                                                    |
| 8            | SendTime         | UInt64 | 8   | 0      | This field is not used                                                                                                    |
| Total Length |                  |        | 16  |        |                                                                                                                           |

After this header, the fields for either Logon (101) or Retransmission Request (201) should follow.

Please note that Retranmission service is not available for Add Order (330) message disseminated in the D-Lite – Order Feed which provides a snapshot message refreshed every second.

### 3.5.1 Logon (101)

The Logon message enables client authentication. This is not required for multicast channels and is only used for retransmission requests.

Normal operation: Client sends a Logon message containing username to the OMD, which responds with a Logon Response message with the SessionStatus set to 0 (Session Active).

## Message Fields

| Offset | Field   | Format | Len | Description         | Values |
|--------|---------|--------|-----|---------------------|--------|
| 0      | MsgSize | UInt16 | 2   | Size of the message |        |

| Offset       | Field    | Format | Len | Description                                            | Values           |
|--------------|----------|--------|-----|--------------------------------------------------------|------------------|
| 2            | MsgType  | UInt16 | 2   | Type of message.                                       | <b>101</b> Logon |
| 4            | Username | String | 12  | Username to log on, padded with binary null characters |                  |
| Total Length |          |        | 16  |                                                        |                  |

### 3.5.2 Logon Response (102)

#### Message Fields

| Offset       | Field         | Format | Len | Description           | Values                                                                                                  |
|--------------|---------------|--------|-----|-----------------------|---------------------------------------------------------------------------------------------------------|
| 0            | MsgSize       | UInt16 | 2   | Size of the message   |                                                                                                         |
| 2            | MsgType       | UInt16 | 2   | Type of message.      | <b>102</b> Logon Response                                                                               |
| 4            | SessionStatus | UInt8  | 1   | Status of the session | <b>0</b> Session Active<br><b>5</b> Invalid username or IP address<br><b>100</b> User already connected |
| 5            | Filler        | String | 3   |                       |                                                                                                         |
| Total Length |               |        | 8   |                       |                                                                                                         |

### 3.5.3 Retransmission Request (201)

#### Message Fields

| Offset       | Field       | Format | Len | Description                                                   | Values                            |
|--------------|-------------|--------|-----|---------------------------------------------------------------|-----------------------------------|
| 0            | MsgSize     | UInt16 | 2   | Size of the message                                           |                                   |
| 2            | MsgType     | UInt16 | 2   | Type of message.                                              | <b>201</b> Retransmission Request |
| 4            | ChannelID   | UInt16 | 2   | Multicast Channel ID to which the retransmission relates      |                                   |
| 6            | Filler      | String | 2   |                                                               |                                   |
| 8            | BeginSeqNum | UInt32 | 4   | Beginning of sequence                                         |                                   |
| 12           | EndSeqNum   | UInt32 | 4   | Message sequence number of last message in range to be resent |                                   |
| Total Length |             |        | 16  |                                                               |                                   |

### 3.5.4 Retransmission Response (202)

#### Message Fields

| Offset | Field         | Format | Len | Description                                                | Values                                                                                                                                                                                                |
|--------|---------------|--------|-----|------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 0      | MsgSize       | UInt16 | 2   | Size of the message                                        |                                                                                                                                                                                                       |
| 2      | MsgType       | UInt16 | 2   | Type of message.                                           | <b>202</b> Retransmission Response                                                                                                                                                                    |
| 4      | ChannelID     | UInt16 | 2   | Multicast Channel ID with which the retransmission relates |                                                                                                                                                                                                       |
| 6      | RetransStatus | UInt8  | 1   | Status of the Retransmission response                      | <b>0</b> Request accepted<br><b>1</b> Unknown/Unauthorized channel ID<br><b>2</b> Messages not available<br><b>100</b> Exceeds maximum sequence range<br><b>101</b> Exceeds maximum requests in a day |
| 7      | Filler        | String | 1   |                                                            |                                                                                                                                                                                                       |
| 8      | BeginSeqNum   | UInt32 | 4   | Beginning of sequence                                      |                                                                                                                                                                                                       |

### 3.5.5 Compression on Payload Message from Retransmission

Same as real time and refresh messages mentioned in Section 3.3.1, the Compression Mode in packet header indicates whether the compression has been applied on the payload message returned from the retransmission server. The returned payload, which is from the channel involving the compression feature, would normally have the packet header with the Compression Mode = 1.

Clients should always read the Compression Mode in the packet header and apply DEFLATE on the returned payload before processing the messages. Before applying the DEFLATE, clients should ensure a complete payload is received (i.e. same length as packet size)

## 3.6 REFRESH

*The information supplied in this section and its sub-sections applies to the Datafeed(s) marked with [●]*

| Section | Derivatives Lite (D-Lite) | Derivatives Standard (DS) | Derivatives Premium (DP) | Derivatives FullTick (DF) |
|---------|---------------------------|---------------------------|--------------------------|---------------------------|
| 3.6     | ●                         | ●                         | ●                        | ●                         |

Refer to Refresh service for details on the Refresh Complete message.

### 3.6.1 Refresh Complete (203)

This message is published to mark the end of a refresh cycle, see section 4.4 for a full description of refresh.

It is also published to mark the end of a snapshot cycle of Add Order (330) messages disseminated in D-Lite – Order Feed.

#### Message Fields

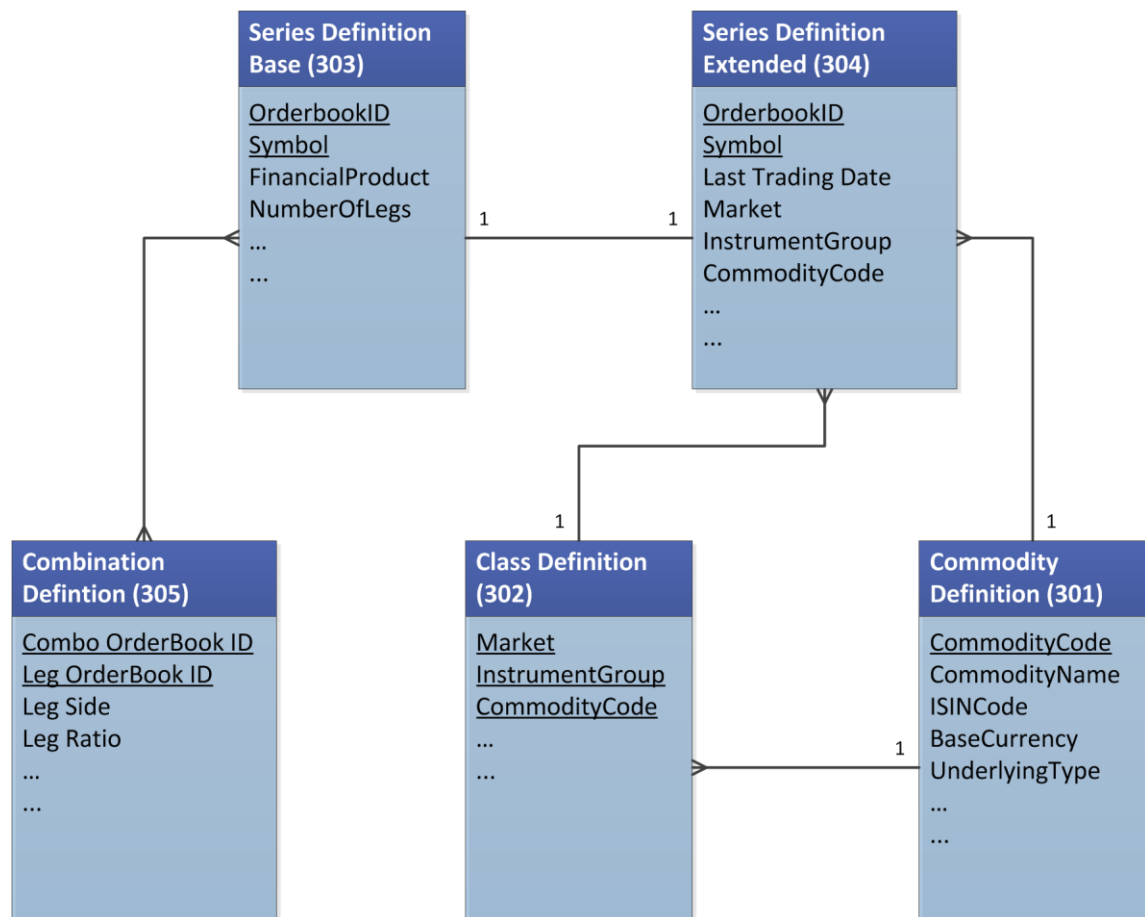

| Offset       | Field      | Format | Len | Description                                             | Values               |
|--------------|------------|--------|-----|---------------------------------------------------------|----------------------|
| 0            | MsgSize    | UInt16 | 2   | Size of the message                                     |                      |
| 2            | MsgType    | UInt16 | 2   | Type of message.                                        | 203 Refresh Complete |
| 4            | LastSeqNum | UInt32 | 4   | Sequence number with which the refresh is synchronized. | Numerical            |
| Total Length |            |        | 8   |                                                         |                      |

## 3.7 REFERENCE DATA

*The information supplied in this section and its sub-sections applies to the Datafeed(s) marked with [●]*

| Section | Derivatives Lite (D-Lite) | Derivatives Standard (DS) | Derivatives Premium (DP) | Derivatives FullTick (DF) |
|---------|---------------------------|---------------------------|--------------------------|---------------------------|
| 3.7     | ●                         | ●                         | ●                        | ●                         |

Static Reference data is organized into 5 messages which are shown in the entity relationship diagram below. The underlined field(s) form the primary key for each message type.

### 3.7.1 Commodity Definition (301)

Describes individual commodities available from the OMD-D system.

Remark \*: denotes that the value is not currently in use for existing products. However, please note that HKEX may use the value anytime when introducing new products

The Market Status (320) message can be used to derive the active state of a series. Readers should refer to the Developer's Guide for a fuller description.

### 3.8.2 Series Status (321)

The Series Status message is generated whenever there is a change to suspension indicator or series status, or when the date/time of last trading is changed.

#### Message Fields

## 3.9 ORDER BOOK DATA

The full order book information is not available in auction session until the completion of auction. However for DS and DP clients an uncrossed orderbook will continue to be sent during the pre-auction period – see section 3.9.5 for details.

### 3.9.1 Add Order (330)

*The information supplied in this section and its sub-sections applies to the Datafeed(s) marked with [●]*

| Section | Derivatives Lite (D-Lite)                                                                                        | Derivatives Standard (DS) | Derivatives Premium (DP) | Derivatives FullTick (DF)                                                             |
|---------|------------------------------------------------------------------------------------------------------------------|---------------------------|--------------------------|---------------------------------------------------------------------------------------|
| 3.9.1   | <br>(via D-Lite – Order Feed) |                           |                          |  |

#### For D-Lite – Order Feed

All outstanding orders of the VCM series will be transmitted through Add Order messages and the interval of this transmission is set at one second. The OrderbookID is unique per series but will not increment consecutively. Unique orders are identified by OrderBookID, Side and OrderID. The OrderBookPosition identifies the rank of an order when compared to other orders within the orderbook for each series.

**For DF**

The Add Order message is generated when a new order is inserted into the order book. The OrderbookID is unique per series but will not increment consecutively. Unique orders are identified by OrderBookID, Side and OrderID. The OrderBookPosition identifies the rank of an order when compared to other orders within the orderbook for each series.

Note that for series which have an auction session then DF clients will receive an **Orderbook Clear (335)** message followed by a large quantity of **Add Order (330)** messages representing the uncrossed book after the end of auction.

**3.9.2 Modify Order (331)**

The information supplied in this section and its sub-sections applies to the Datafeed(s) marked with [●]

| Section | Derivatives Lite (D-Lite) | Derivatives Standard (DS) | Derivatives Premium (DP) | Derivatives FullTick (DF) |
|---------|---------------------------|---------------------------|--------------------------|---------------------------|
| 3.9.2   |                           |                           |                          | ●                         |

The Modify Order message is generated when an existing order identified by the OrderID is modified. The attributes that can be modified are Position, Quantity, Price and OrderType.

In most cases, modification to an order will result in a Delete Order message followed by an Add Order message. Despite that, clients' application should have the ability to process Modify Order messages if received.

### Message Fields

### 3.9.4 Aggregate Order Book Update (353)

*The information supplied in this section and its sub-sections applies to the Datafeed(s) marked with [●]*

| Section | Derivatives Lite (D-Lite) | Derivatives Standard (DS) | Derivatives Premium (DP) | Derivatives FullTick (DF) |
|---------|---------------------------|---------------------------|--------------------------|---------------------------|
| 3.9.4   | ●                         | ●                         | ●                        |                           |

For D-Lite clients, the aggregate order book is sent whenever there is a orderbook change within the top 5 price levels. For DS clients, the aggregate order book is sent whenever there is a orderbook change within the top 10 price levels. For DP clients then all orderbook changes will lead to a message being disseminated, either for the top 10 levels (like DS) or as an adjustment of the PriceLevel 255, which is a special price level used to display aggregated remaining liquidity beyond the 10<sup>th</sup> level.

For series with pre-auction periods the best bid and ask may both be equal to the calculated opening price or may be equal to Null if the book is uncrossed but with market orders present. See Examples 6 and 7 in Section 6 for details.

Refer to Section 6 - Aggregate Order Book Management for details on the Aggregate Order Book Update message.

### 3.9.5 Orderbook Clear (335)

*The information supplied in this section and its sub-sections applies to the Datafeed(s) marked with [●]*

| Section | Derivatives Lite (D-Lite) | Derivatives Standard (DS) | Derivatives Premium (DP) | Derivatives FullTick (DF) |
|---------|---------------------------|---------------------------|--------------------------|---------------------------|
| 3.9.5   |                           |                           |                          | ●                         |

The Orderbook Clear message is used to inform clients that all existing orders should be removed from both the bid and ask sides of the specified orderbook. The message is typically used at the start and end of Auction;

*At the end of Auction, DF clients will receive an **Orderbook Clear (335)** message followed by a large quantity of **Add Order (330)** messages representing the uncrossed book.*

Clients should clear both bid and ask side orders for the specified orderbook.

#### Message Fields

| Offset             | Field        | Format | Len | Description                                        | Values              |

### 3.9.6 Quote Request (336)

*The information supplied in this section and its sub-sections applies to the Datafeed(s) marked with [●]*

| Section | Derivatives Lite (D-Lite) | Derivatives Standard (DS) | Derivatives Premium (DP) | Derivatives FullTick (DF) |
|---------|---------------------------|---------------------------|--------------------------|---------------------------|
| 3.9.6   | ●                         | ●                         | ●                        | ●                         |

The Quote Request message is generated whenever market participants request a new quotation.

Clients should ignore the Quote Request message with zero OrderbookID or a negative value in NumberOfLots.

## 3.10 TRADE AND PRICE DATA

### 3.10.1 Trade (350)

The information supplied in this section and its sub-sections applies to the Datafeed(s) marked with [●]

| Section | Derivatives Lite (D-Lite)         | Derivatives Standard (DS)         | Derivatives Premium (DP) | Derivatives FullTick (DF) |
|---------|-----------------------------------|-----------------------------------|--------------------------|---------------------------|
| 3.10.1  | ▲<br>(via Derivatives Trade feed) | ▲<br>(via Derivatives Trade feed) | ●                        | ●                         |

The Trade message is generated each time a trade has been performed.

The executions may be marked as non-printable. If a participant is looking to use the data in trade tickers or volume calculations, it is recommended that participants ignore messages marked as non-printable to prevent double counting.

- NOTE 1: Combination orders on the book that execute will always be represented by this message.
- NOTE 2: Combination orders that execute will have the Printable flag set to "N". The trades that occur in the legs of the Combo Series will be printable. This avoids double counting of the combination order and its leg trades. Leg trades will be published with the Trade message.

For DF clients; if the OrderID within the Trade (350) message is non-zero then users must reduce the resting order identified by the 'Quantity' within the Trade (350) message. If the outstanding quantity is zero the order must be deleted. DP clients will have the update managed for them and receive a new Aggregate Order Book Update (353) message accordingly.

**Important messages:** Clients who intend to calculate trade statistics based on Trade (350) and Trade Amendment (356) are advised NOT to compare their internally aggregated turnover with those carried in the Trade Statistics (360) and the Series Statistics (363) as they may not be synchronized given the former trade messages are disseminated on streaming basis whilst the latter statistics are published on snapshot basis. Please also note that price information (Open/High/Low/Last Price) provided in Trade Statistics (360) and Series Statistics (363) cannot be derived from Trade (350) and Trade Amendment (356). For information only, the price information excludes (i) Reported Trade (DealType = 4 or above); and (ii) Leg Trades from Combo versus Combo Trades (where OrderID being zero and not "Occurred at Cross" (i.e. DealType not = 2 or 3). However, it is important to note that the stated behavior is not exclusive to Leg Trades from Combo versus Combo Trades and thus cannot be used to differentiate such Leg Trades).

| 48                 | TradeTime      | UInt64 | 8   | Date and time of the last trade in UTC timestamp (nanoseconds since 1970) precision to the nearest 1/100 <sup>th</sup> second | UTC Timestamp                                                                               |
| Total Length ..... |                |        | 56  |                                                                                                                               |                                                                                             |

Remark \*: denotes that the value is not currently in use for existing products. However, please note that HKEX may use the value anytime when introducing new products

Note : The Printable property does not apply to Reported Trade. For other trades, i.e. trades matched by the trading system, it will be OFF for trades on Combo Series to avoid double counting of the trade quantity to market turnover.

### 3.10.2 Trade Amendment (356)

The information supplied in this section and its sub-sections applies to the Datafeed(s) marked with [●]

| Section | Derivatives Lite (D-Lite)    | Derivatives Standard (DS)    | Derivatives Premium (DP) | Derivatives FullTick (DF) |
|---------|------------------------------|------------------------------|--------------------------|---------------------------|
| 3.10.2  | ▲<br>(via Derivatives Trade) | ▲<br>(via Derivatives Trade) | ●                        | ●                         |

Represents a trade amendment or cancellation.

Notes:

- If a traded quantity is reduced then a Trade Amendment (356) delete ("TradeState" = 3) will be sent followed by a rectification ("TradeState" = 2).
- Price and Quantity may not be available for cancelled trades which have already been given up ("TradeState" = 1) and in such cases the Price and Quantity will be NULL and 0 respectively. Please ignore these values.

| 3.10.5  | ●                         | ●                         | ●                        | ●                         |

The Calculated Opening Price (COP) message indicates an instrument's theoretical opening price during the pre-opening phases of the market (prior to an auction). A COP message is generated when the indicative matching price or volume varies. If the Price set to Null, the COP is no longer applicable.

## 3.11 NEWS

### 3.11.1 Market Alert (323)

*The information supplied in this section and its sub-sections applies to the Datafeed(s) marked with [●]*

| Section | Derivatives Lite (D-Lite) | Derivatives Standard (DS) | Derivatives Premium (DP) | Derivatives FullTick (DF) |
|---------|---------------------------|---------------------------|--------------------------|---------------------------|
| 3.11.1  | ●                         | ●                         | ●                        | ●                         |

The Market Alert message is generated periodically to relay market announcements and alerts. The "AlertID" and "Source" fields provide a unique key for any given announcement. "Source" field indicates the origin of the alert message. For each "Source", "AlertID" is unique on every business day.

If the size of a single announcement is greater than the maximum supported packet size, then the alert will be sent as multiple messages, each with the same 'AlertID'. These Market Alert (323) messages are disseminated sequentially each with the "LastFragment" field set to "N" except the last message within the alert which has the 'LastFragment' field set to 'Y'. Note that in this case the Header field would be the same for all messages within this announcement.

## Message Fields

## 4. RECOVERY

OMD provides three different mechanisms for recovering missed data:

Line arbitration – using dual multicast channels (Line A and Line B)

Retransmission Server – recovery of a limited number of messages

Refresh Server – snapshot of current market state

These mechanisms should be used as described in the following table.

**Table 2: Recovery Mechanisms**

| Event                                       | Action                                                                                         |
|---------------------------------------------|------------------------------------------------------------------------------------------------|
| Packet lost on one either Line A or Line B  | Try to recover data from the other line with a configurable timeout ("arbitration mechanism"). |
| Dropped packet(s) on both Line A and Line B | Recover dropped message(s) from the Retransmission Server.                                     |
| Late start up or extended intraday outage   | Wait for a refresh of the current market state and then continue with real time messages.      |

### 4.1 GAP DETECTION

Each packet provides the sequence number (SN) of the first message it contains. This sequence number starts at 1 and increases with each subsequent message.

The sequence numbers provided in every packet header is calculated by adding the previous sequence number and the message count, as shown in table below:

**Table 3: Sequence Number Calculation**

| Packet   | Sequence Number | Message Count |
|----------|-----------------|---------------|
| Packet 1 | 1               | 4             |
| Packet 2 | 5               | 2             |
| Packet 3 | 7               | 1             |
| Packet 4 | 8               | 3             |
| Packet 5 | 11              | 1             |

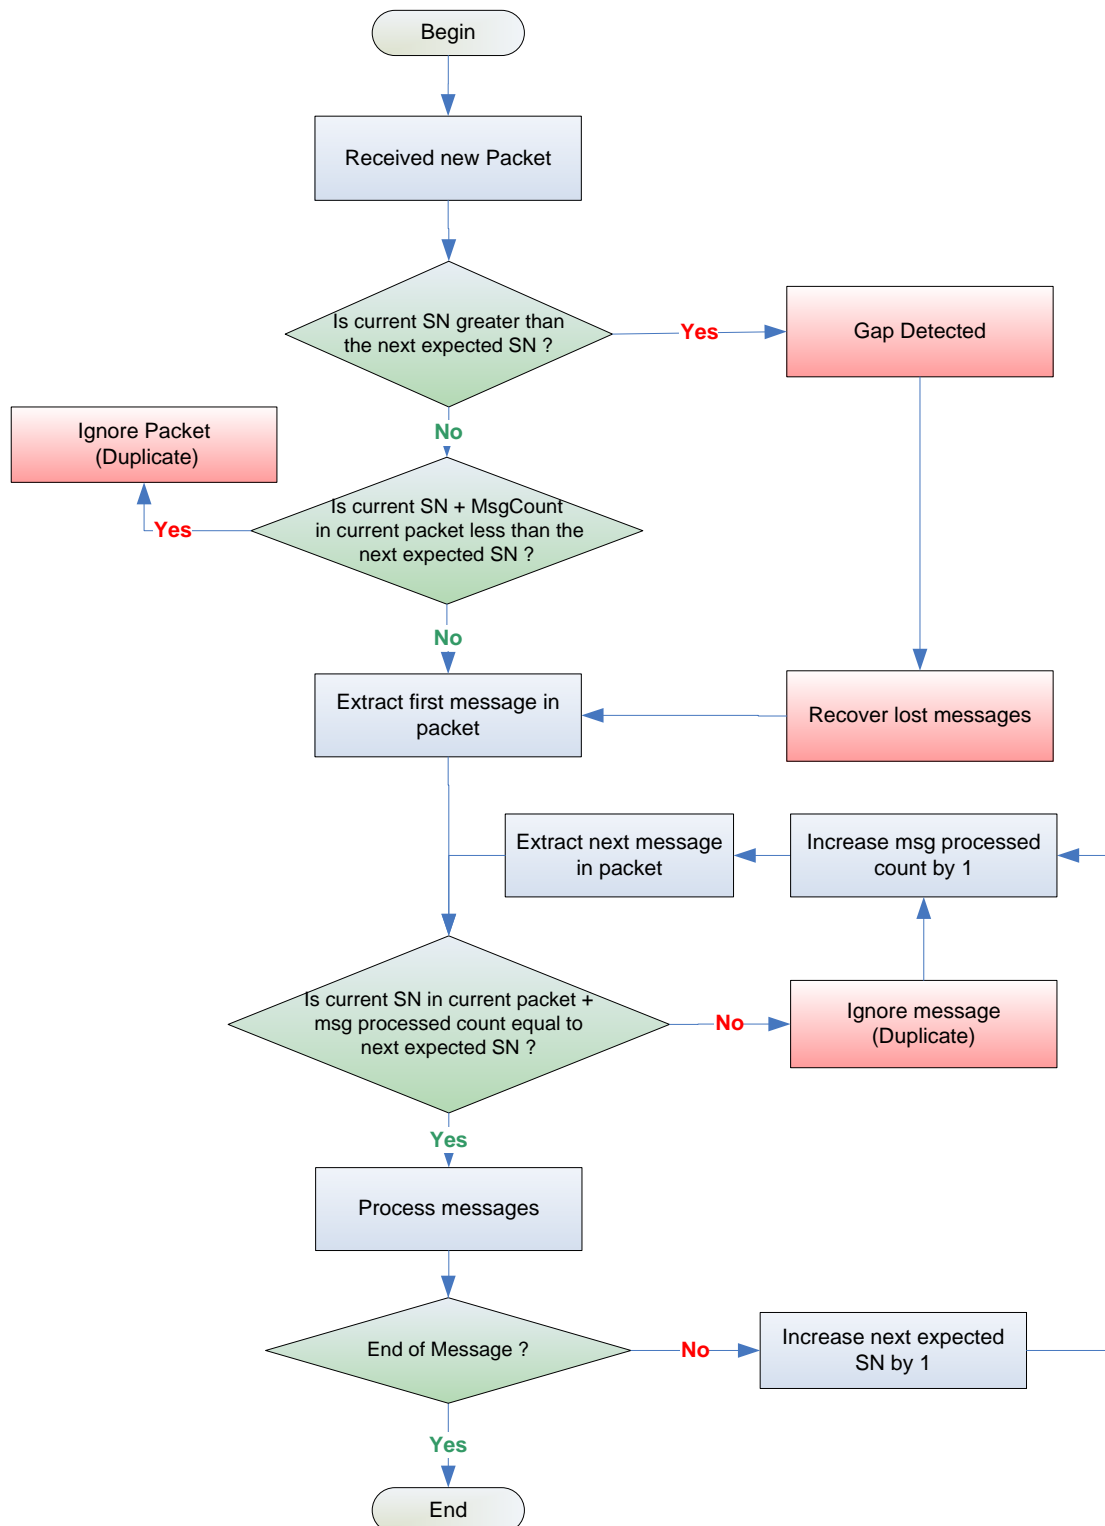

If the client drops the first five packets they would request a gap fill for messages 1-11.

All messages conform to the message level sequencing. Each channel has its own sequence number. This allows recipients to detect gaps or duplicates in each message sequence number and, if appropriate, reconcile them (line arbitration) with the primary or secondary multicast groups or request retransmission of the missing / corrupted messages.

Users should use this sequence number to detect gaps in the transmission of messages.

The following diagram illustrates how the message sequence number should be used to detect gaps in the feed.

Figure 2: Gap Detection using the Sequence Number (SN)

## 4.2 LINE ARBITRATION

Client applications should check the sequence number (SN) and message count (MC) for every packet received. SNs are unique and increase monotonically for each service, the MC indicates the number of messages within each packet.

Line A and Line B are identical in terms of:

- SNs
- Messages that are sent
- Sequence in which messages are sent

However it is not guaranteed that a packet content between Line A and Line B will be the same. For example the third packet of the day from the Line A could contain SN 10 with MC 3, where as the third packet of the day from Line B could contain SN 9 with MC 4. For this reason clients must arbitrate on SN (at the message level) rather than packet content. Client applications should listen to both Line A and Line B in real-time. Clients should look at packets coming from both lines and process the ones that arrive first, regardless of whether they came from Line A or Line B. It is advisable to apply the “first come – first served” rule.

Figure 3 – Detecting Missing Packets

Additional Notes;

- The above example of a dropped packet is a simplified example assuming 1 message per packet, in reality each packet is likely to contain multiple messages
- Whilst the order of individual messages between Line A and Line B will be identical, there is no guarantee that the packets will contain exactly the same messages.
- In the example below, three packets are sent on each line, but message ‘OrderUpdate3’ appears in one packet from Line A but in the subsequent packet on Line B.

Figure 4 – Normal Message Delivery

| Primary                                      |    |     | Secondary |    |                                        |

## 4.3 RETRANSMISSION SERVICE

The retransmission service is provided via the TCP/IP protocol and is designed to allow clients to recapture a small number of missed messages already published on the real time channels.

It is not intended that clients use the retransmission server to recover data after long outages or on late start up (in these situations, clients should use the Refresh service). To that end, it aims to support the retransmission of the data covering the market activities for the last 15-30 seconds only. This figure is indicative only and may be shorter than 15 seconds if a spike happens in the market. The sequence range of messages that a client can request and the number of retransmission requests permitted per day is also limited.

The following diagram illustrates the message flow during a retransmission session:

**Figure 5: Retransmission Request**

### Logon

The client establishes a TCP/IP connection and initiates a session by sending the Logon message. Once the client is authenticated the server will respond immediately with the Logon Response message. If the client does not send a Logon message within the logon timeout interval, the server will close the connection.

Logons may be rejected for the following reasons:

- Invalid username
- User already connected

In all cases the server will close the connection after sending the Logon Response message.

### Making a request

The client can make a retransmission request by sending the Retrans Request message. The server will respond with a Retrans Response message to indicate whether the request has been accepted or not.

In the case of a successful request the server will send the requested messages immediately after the Retrans Response message.

The sequence numbers will be the same as when they were first sent on the real time multicast channel. The framing of the retransmitted messages into a packet may differ from the original transmission.

Retransmission requests may be rejected for the following reasons:

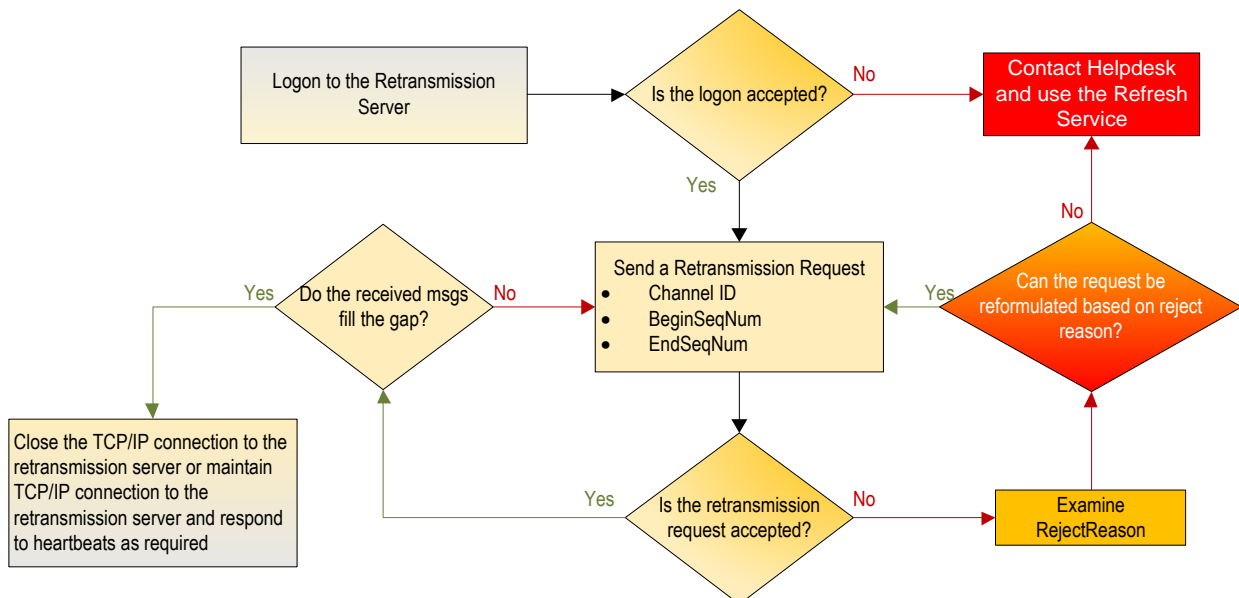

Unknown channel ID or illegal (not authorized)  
Messages not available

Exceeds maximum sequence range  
Exceeds maximum requests in a day

In the case where the client has exceeded the maximum number of requests allowed in a day, the server will close the connection after sending the Retrans Response message.

The following diagram is a guideline of the flow of logic when making a request:

Figure 6: Requesting Dropped Packets

### Multiple requests and concurrent sessions

Clients can send multiple requests during a session and can keep the session open during idle periods by responding to heartbeats sent by the server. Concurrent sessions however will not be supported. Each user can only have one session open at a time.

If a client makes multiple requests, the server will process them serially. Clients are unable to cancel outstanding requests.

### Heartbeats

To determine the health of the user connection on the TCP/IP channel, the Retransmission Server will send regular heartbeat packets to the user. The heartbeat frequency is 30 seconds. The client application must respond with a "Heartbeat Response" packet. The time out for this heartbeat response packet is set at 5 seconds. If no response is received by the server within this timeframe, the TCP/IP session will be disconnected.

Figure 7: Retransmission Server Heartbeat Message

A "heartbeat response" packet consists in an exact copy of the incoming heartbeat packet.

### Closing the session

Sessions should be terminated by gracefully closing the TCP/IP connection.

### System limits

The system limits mentioned above are set as follows:

| System Limit                                 | Value  |
|----------------------------------------------|--------|
| Maximum sequence range that can be requested | 10,000 |
| Maximum number of requests per day           | 1,000  |
| Logon timeout (seconds)                      | 5      |
| Heartbeat interval (seconds)                 | 30     |
| Heartbeat response timeout (seconds)         | 5      |

Please note that the maximum number of requests per day limit is across all channels.

### High availability

Four sets of IP address and port are provided for the retransmission service in order to facilitate high availability (two are in primary site and two are in secondary site). All four retransmission servers are available to be connected regardless of the multicast dissemination is in the primary or secondary site. Clients may connect to any one of retransmission servers at the start of the day and maintain the connection during the day by responding to heartbeats. However, clients should not connect to multiple retransmission servers concurrently.

In the event that a Retransmission Server does not respond to a logon or retransmission request, another Retransmission Server should be used.

In the event of a failure of any Retransmission Server, there may be a short period of unavailability. This failure should be detected by clients through the loss of connection. In this case another Retransmission Server should be used.

Alternative Retransmission Servers should not be used as a means of requesting from multiple sources at the same time..

## 4.4 REFRESH SERVICE

The refresh service is designed to allow clients to recover from a large scale data loss. This can happen after a late start or during a major outage.

Synchronization is on a per channel basis. For each real time multicast channel (besides those for Trade, Trade Amendment & Quote Request which are not recoverable via the Refresh service), there exists a corresponding refresh multicast channel on which snapshots of the market state are sent at regular intervals throughout the business day. No ordering should be assumed between the various different data types unless otherwise stated – this is due to the nature of using multiple different multicast channels for refresh.

### Snapshot

A snapshot of the market state is described in the table below.

| Message                              | Snapshot description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

The ordering of refresh messages types within the multicast channels is detailed below;

| Channel            | Refresh Sequence                                                                     |
|--------------------|--------------------------------------------------------------------------------------|
| Static Base        | Series Definition Base (303), Combination Definition (305)                           |
| Order (DF)         | Calculated Opening Price (364), Add Order (330)                                      |
| Order (DP)         | Calculated Opening Price (364), Aggregate Order Book Update (353)                    |
| Order (DS)         | Calculated Opening Price (364), Aggregate Order Book Update (353)                    |
| Static Extended    | Commodity Definition (301), Class Definition (302), Series Definition Extended (304) |
| Series Status      | Market Status (320), Commodity Status (322), Series Status (321)                     |
| Trade Statistics   | Trade Statistics (360)                                                               |
| Series Statistics  | Series Statistics (363)                                                              |
| Market Alert       | Market Alert (323)                                                                   |
| Open Interest      | Open Interest (366)                                                                  |
| Implied Volatility | Implied Volatility (367)                                                             |

### Refresh complete

A Refresh Complete message is sent at the end of a snapshot indicating the sequence number with which the snapshot is synchronized.

### Snapshot processing

Below is an overview of the steps to carry out in order to process a channel snapshot.

- Subscribe to the real time multicast channel and cache received messages.

- Subscribe to the corresponding refresh multicast channel and discard messages until the Refresh Complete message is received.
- Process received messages until the next Refresh Complete message is received.
- Store the LastSeqNum sequence number provided in the Refresh Complete.
- Unsubscribe to the refresh multicast channel.
  
- Discard the cached real time messages with sequence number less than or equal to LastSeqNum.
- Process the remaining cached real-time messages and resume normal processing.

#### Missed messages

The retransmission server does not support refresh channels. If a client misses messages, it must wait for the next snapshot. Similarly if a client starts listening during the middle of a snapshot, it must wait for the next snapshot.

### 4.4.1 Refresh of Market Status

Many of the messages within refresh are singular per series and the refresh server simply published the most recent value. However the refresh data will typically include a number of Market Status (320) messages will be sent together and correct processing users should refer the description given in Section 3.8.1 to determine the correct Trading and Instrument Session State.

## 5. FULLTICK ORDERBOOK MANAGEMENT

*The information supplied in this section and its sub-sections applies to the Datafeed(s) marked with [●]*

| Section | Derivatives Lite<br>(D-Lite)   | Derivatives Standard<br>(DS) | Derivatives Premium<br>(DP) | Derivatives FullTick<br>(DF) |
|---------|--------------------------------|------------------------------|-----------------------------|------------------------------|
| 5       | ▲<br>(via D-Lite – Order Feed) |                              |                             | ●                            |

The information needed to build an order book view from the message flow is contained within the following messages:

- Add Order (330)
- Modify Order (331)
- Delete Order (332)

Orders shall be ranked by:

- Order Book Position. 1 denotes the highest ranked order. For an Modify Order (331), the order must be removed from its previous position and inserted at new OrderBookPosition. An order inserted at an existing position shifts the order on that position down (and all orders below as well. A deleted or fully filled order causes existing orders below it to shift their position up one step to fill the “void”.

The Modify Order (331) message signals that the order has been modified. The current rank may or may not be lost in the process OrderBookPosition field will show the new rank within the book.

The Order Delete (332) message tells the recipient to remove the order referenced.

D-Lite Order Feed only disseminates Add Order (330) message for all outstanding orders of VCM series on a snapshot basis and refreshes every second.

## 6. AGGREGATE ORDER BOOK MANAGEMENT

The information supplied in this section and its sub-sections applies to the Datafeed(s) marked with [●]

| Section | Derivatives Lite (D-Lite) | Derivatives Standard (DS) | Derivatives Premium (DP) | Derivatives FullTick (DF) |
|---------|---------------------------|---------------------------|--------------------------|---------------------------|
| 6       | ●                         | ●                         | ●                        |                           |

### Book Identification

A book is uniquely identified by either OrderbookID or Symbol and there is a 1-to-1 map between these two identifiers. OrderbookID is an integer representation of 4 bytes, Symbol is a longer String representation (32 bytes) that gives the short name. Whilst Symbol is 'readable' to human users, the OrderbookID is more efficient when sending market data updates, and therefore OrderbookID is the identifier that appears on every series related message.

### Partial Price Depth

The price level within the Aggregate Order Book Update message determines the number of price levels the order price is away from the best price for a given order book. An order with price level 1 means the order's price is the best price, a price level of 2 will be used for orders at the next best price, etc.

Different datafeeds in OMD provide a different view of multiple price depths of aggregate order book for the Derivatives Market. D-Lite provides 5 price depths of aggregate order book while DS and DP provide 10 price depths (10+1 for DP). This view can be visualized as a number of rows in a table for each of the bid and ask sides. On each side there are a number of rows showing the aggregate quantity available at a number of price levels.

| Bid Side   |                   |       | Ask Side |                   |            |
|------------|-------------------|-------|----------|-------------------|------------|
| PriceLevel | AggregateQuantity | Price | Price    | AggregateQuantity | PriceLevel |
| 1          | 700               | 9730  | 9760     | 500               | 1          |
| 2          | 350               | 9720  | 9770     | 300               | 2          |
| 3          | 150               | 9710  | 9780     | 100               | 3          |
| 4          | 250               | 9700  | 9790     | 150               | 4          |
| 5          | 100               | 9690  |          |                   |            |
| 6          | 150               | 9680  |          |                   |            |
| 7          | 50                | 9670  |          |                   |            |
| 8          | 200               | 9660  |          |                   |            |
| 9          | 100               | 9650  |          |                   |            |

### Book Updates

Book update messages are generated by OMD as delta messages defined in section 6 (**Aggregate Order Book Update (353)**). Each message may contain any combination of new, changed, deleted or orderbook clear entries for a book. The nature of an entry is defined by its UpdateAction.

**New**, to create/insert a new price level

**Delete**, to remove a price level

**Change**, to update aggregate quantity at a price level

**Orderbook Clear**, to inform users that all price levels should be cleared

### Example 1 – Quantity Reduction and Explicit Addition

For example suppose the Ask order at price level 9770 is reduced in quantity and at the same time a new order is added at price level 9850, then the following message is sent;

| D-Lite, DS and DP |            |       |
|-------------------|------------|-------|
| Offset            | Field Name | Value |

|    |                   |           |
|----|-------------------|-----------|
| 0  | MsgSize           | 60        |
| 2  | MsgType           | 53        |
| 4  | OrderbookID       | 1234      |
| 8  | Filler            | NULL      |
| 11 | NoEntries         | 2         |
| 12 | AggregateQuantity | 200       |
| 20 | Price             | 9770      |
| 24 | NumberOfOrders    | 1         |
| 28 | Side              | 1 (Offer) |
| 30 | PriceLevel        | 2         |
| 31 | UpdateAction      | 1         |
| 32 | Filler            | NULL      |
| 36 | AggregateQuantity | 300       |
| 44 | Price             | 9850      |
| 48 | NumberOfOrders    | 1         |
| 52 | Side              | 1 (Offer) |
| 54 | PriceLevel        | 5         |
| 55 | UpdateAction      | 0         |
| 56 | Filler            | NULL      |

The resulting book should now be as follows:

| D-Lite     |                   |       |          |                   |            |
|------------|-------------------|-------|----------|-------------------|------------|
| Bid Side   |                   |       | Ask Side |                   |            |
| PriceLevel | AggregateQuantity | Price | Price    | AggregateQuantity | PriceLevel |
| 1          | 700               | 9730  | 9760     | 500               | 1          |
| 2          | 350               | 9720  | 9770     | 200               | 2          |
| 3          | 150               | 9710  | 9780     | 100               | 3          |
| 4          | 250               | 9700  | 9790     | 150               | 4          |
| 5          | 100               | 9690  | 9850     | 300               | 5          |

| DS and DP  |                   |       |          |                   |            |
|------------|-------------------|-------|----------|-------------------|------------|
| Bid Side   |                   |       | Ask Side |                   |            |
| PriceLevel | AggregateQuantity | Price | Price    | AggregateQuantity | PriceLevel |
| 1          | 700               | 9730  | 9760     | 500               | 1          |
| 2          | 350               | 9720  | 9770     | 200               | 2          |
| 3          | 150               | 9710  | 9780     | 100               | 3          |
| 4          | 250               | 9700  | 9790     | 150               | 4          |
| 5          | 100               | 9690  | 9850     | 300               | 5          |
| 6          | 150               | 9680  |          |                   |            |
| 7          | 50                | 9670  |          |                   |            |
| 8          | 200               | 9660  |          |                   |            |
| 9          | 100               | 9650  |          |                   |            |

### Example 2 – Implicit Level Adjustments

The client must adjust the price level of entries below deleted or inserted entries. Potential level adjustments must be carried out after each single entry in Aggregate Order Book message.

For example, if a bid order with price 9740 and quantity 50 is added to the order book above, it will cause the following message to be sent:

| D-Lite, DS and DP |                   |         |
|-------------------|-------------------|---------|
| Offset            | Field Name        | Value   |
| 0                 | MsgSize           | 36      |
| 2                 | MsgType           | 53      |
| 4                 | OrderbookID       | 1234    |
| 8                 | Filler            | NULL    |
| 11                | NoEntries         | 1       |
| 12                | AggregateQuantity | 50      |
| 20                | Price             | 9740    |
| 24                | NumberOfOrders    | 1       |
| 28                | Side              | 0 (Bid) |
| 30                | PriceLevel        | 1       |
| 31                | UpdateAction      | 0       |
| 32                | Filler            | NULL    |

After processing this message, the client's book should look as follows:

| D-Lite     |                   |       |          |                   |            |
|------------|-------------------|-------|----------|-------------------|------------|
| Bid Side   |                   |       | Ask Side |                   |            |
| PriceLevel | AggregateQuantity | Price | Price    | AggregateQuantity | PriceLevel |
| 1          | 50                | 9740  | 9760     | 500               | 1          |
| 2          | 700               | 9730  | 9770     | 200               | 2          |
| 3          | 350               | 9720  | 9780     | 100               | 3          |
| 4          | 150               | 9710  | 9790     | 150               | 4          |
| 5          | 250               | 9700  | 9850     | 300               | 5          |

Price levels of the other 4 Bid orders must all be incremented although there will not be Aggregate Order Book Update messages sent for the increment.

| DS and DP  |                   |       |          |                   |            |
|------------|-------------------|-------|----------|-------------------|------------|
| Bid Side   |                   |       | Ask Side |                   |            |
| PriceLevel | AggregateQuantity | Price | Price    | AggregateQuantity | PriceLevel |
| 1          | 50                | 9740  | 9760     | 500               | 1          |
| 2          | 700               | 9730  | 9770     | 200               | 2          |
| 3          | 350               | 9720  | 9780     | 100               | 3          |
| 4          | 150               | 9710  | 9790     | 150               | 4          |
| 5          | 250               | 9700  | 9850     | 300               | 5          |
| 6          | 100               | 9690  |          |                   |            |
| 7          | 150               | 9680  |          |                   |            |
| 8          | 50                | 9670  |          |                   |            |
| 9          | 200               | 9660  |          |                   |            |
| 10         | 100               | 9650  |          |                   |            |

Price levels of the other 9 Bid orders must all be incremented although there will not be Aggregate Order Book Update messages sent for the increment.

### Example 3 – Implicit Deletions

For DP clients, implicit deletions are relevant, but notice also that the aggregated 11<sup>th</sup> price level will also be adjusted – see example 5 below for details.

If a new book entry causes the bottom entry of a book to be shifted out of the book (i.e. more than 4 price levels away from the best price for D-Lite whereas more than 9 price levels away from the best price for DS and DP), the client must delete the excess entry. If the book shrinks again, OMD resends the entries that have temporarily fallen out.

For example, if a bid order with price 9750 and quantity 250 is added to the book above, and the bid quantity at price 9660 is reduced from 200 to 150, it will cause the following message to be sent:

| D-Lite |                   |         |
|--------|-------------------|---------|
| Offset | Field Name        | Value   |
| 0      | MsgSize           | 60      |
| 2      | MsgType           | 53      |
| 4      | OrderbookID       | 1234    |
| 8      | Filler            | NULL    |
| 11     | NoEntries         | 1       |
| 12     | AggregateQuantity | 250     |
| 20     | Price             | 9750    |
| 24     | NumberOfOrders    | 1       |
| 28     | Side              | 0 (Bid) |
| 30     | PriceLevel        | 1       |
| 31     | UpdateAction      | 0       |
| 32     | Filler            | NULL    |

After processing this message, the client's book should look as follows:

| D-Lite     |                   |       |          |                   |            |
|------------|-------------------|-------|----------|-------------------|------------|
| Bid Side   |                   |       | Ask Side |                   |            |
| PriceLevel | AggregateQuantity | Price | Price    | AggregateQuantity | PriceLevel |
| 1          | 250               | 9750  | 9760     | 500               | 1          |
| 2          | 50                | 9740  | 9770     | 200               | 2          |
| 3          | 700               | 9730  | 9780     | 100               | 3          |
| 4          | 350               | 9720  | 9790     | 150               | 4          |
| 5          | 150               | 9710  | 9850     | 300               | 5          |

Price 9750 and quantity 250 is added according to the message.

Price 9700 and quantity 250 must be deleted by the client.

| DS and DP |                   |         |
|-----------|-------------------|---------|
| Offset    | Field Name        | Value   |
| 0         | MsgSize           | 60      |
| 2         | MsgType           | 53      |
| 4         | OrderbookID       | 1234    |
| 8         | Filler            | NULL    |
| 11        | NoEntries         | 2       |
| 12        | AggregateQuantity | 250     |
| 20        | Price             | 9750    |
| 24        | NumberOfOrders    | 1       |
| 28        | Side              | 0 (Bid) |
| 30        | PriceLevel        | 1       |

| 55        | UpdateAction      | 1       |
| 56        | Filler            | NULL    |

After processing this message, the client's book should look as follows:

| DS and DP  |                   |       |          |                   |            |
|------------|-------------------|-------|----------|-------------------|------------|
| Bid Side   |                   |       | Ask Side |                   |            |
| PriceLevel | AggregateQuantity | Price | Price    | AggregateQuantity | PriceLevel |
| 1          | 250               | 9750  | 9760     | 500               | 1          |
| 2          | 50                | 9740  | 9770     | 200               | 2          |
| 3          | 700               | 9730  | 9780     | 100               | 3          |
| 4          | 350               | 9720  | 9790     | 150               | 4          |
| 5          | 150               | 9710  | 9850     | 300               | 5          |
| 6          | 250               | 9700  |          |                   |            |
| 7          | 100               | 9690  |          |                   |            |
| 8          | 150               | 9680  |          |                   |            |
| 9          | 50                | 9670  |          |                   |            |
| 10         | 150               | 9660  |          |                   |            |

Price 9750 and quantity 250 is added according to the message.

Price 9650 and quantity 100 must be deleted by the client.

Price 9660 quantity must be reduced to 150 – PriceLevel 10 is used in the incoming message to reflect the new price level of the price 9660 after the addition of the price 9750.

#### Example 4 – Explicit Additions

For DP clients, explicit additions are relevant, but notice also that the aggregated 11<sup>th</sup> price level will also be adjusted – see example 5 below for details.

If orders are removed so that there are now less than 5 levels for D-Lite and 10 levels for DS and DP visible then the server will also automatically send the additional level(s) that are now revealed.

For example, if the bid order with price 9750 and quantity 250 is now removed from the book above and this reveals an 6<sup>th</sup> level for D-Lite and 11<sup>th</sup> level for DS and DP which need to be disseminated then it will cause the following message to be sent:

| D-Lite |                   |         |
|--------|-------------------|---------|
| Offset | Field Name        | Value   |
| 0      | MsgSize           | 60      |
| 2      | MsgType           | 53      |
| 4      | OrderbookID       | 1234    |
| 8      | Filler            | NULL    |
| 11     | NoEntries         | 2       |
| 12     | AggregateQuantity | 250     |
| 20     | Price             | 9750    |
| 24     | NumberOfOrders    | 1       |
| 28     | Side              | 0 (Bid) |
| 30     | PriceLevel        | 1       |
| 31     | UpdateAction      | 2       |
| 32     | Filler            | NULL    |
| 36     | AggregateQuantity | 250     |
| 44     | Price             | 9700    |
| 48     | NumberOfOrders    | 1       |
| 52     | Side              | 0 (Bid) |
| 54     | PriceLevel        | 5       |
| 55     | UpdateAction      | 0       |
| 56     | Filler            | NULL    |

The resulting order book should now be;

| D-Lite     |                   |       |          |                   |            |
|------------|-------------------|-------|----------|-------------------|------------|
| Bid Side   |                   |       | Ask Side |                   |            |
| PriceLevel | AggregateQuantity | Price | Price    | AggregateQuantity | PriceLevel |
| 1          | 50                | 9740  | 9760     | 500               | 1          |
| 2          | 700               | 9730  | 9770     | 200               | 2          |
| 3          | 350               | 9720  | 9780     | 100               | 3          |
| 4          | 150               | 9710  | 9790     | 150               | 4          |
| 5          | 250               | 9700  | 9850     | 300               | 5          |

| DS and DP |                   |         |
|-----------|-------------------|---------|
| Offset    | Field Name        | Value   |
| 0         | MsgSize           | 60      |
| 2         | MsgType           | 53      |
| 4         | OrderbookID       | 1234    |
| 8         | Filler            | NULL    |
| 11        | NoEntries         | 2       |
| 12        | AggregateQuantity | 250     |
| 20        | Price             | 9750    |
| 24        | NumberOfOrders    | 1       |
| 28        | Side              | 0 (Bid) |
| 30        | PriceLevel        | 1       |

|    |                   |         |
|----|-------------------|---------|
| 31 | UpdateAction      | 2       |
| 32 | Filler            | NULL    |
| 36 | AggregateQuantity | 100     |
| 44 | Price             | 9650    |
| 48 | NumberOfOrders    | 1       |
| 52 | Side              | 0 (Bid) |
| 54 | PriceLevel        | 10      |
| 55 | UpdateAction      | 0       |
| 56 | Filler            | NULL    |

The resulting order book should now be;

| DS and DP  |                   |       |          |                   |            |
|------------|-------------------|-------|----------|-------------------|------------|
| Bid Side   |                   |       | Ask Side |                   |            |
| PriceLevel | AggregateQuantity | Price | Price    | AggregateQuantity | PriceLevel |
| 1          | 50                | 9740  | 9760     | 500               | 1          |
| 2          | 700               | 9730  | 9770     | 200               | 2          |
| 3          | 350               | 9720  | 9780     | 100               | 3          |
| 4          | 150               | 9710  | 9790     | 150               | 4          |
| 5          | 250               | 9700  | 9850     | 300               | 5          |
| 6          | 100               | 9690  |          |                   |            |
| 7          | 150               | 9680  |          |                   |            |
| 8          | 50                | 9670  |          |                   |            |
| 9          | 200               | 9660  |          |                   |            |
| 10         | 100               | 9650  |          |                   |            |

#### Example 5 – The Aggregated 11<sup>th</sup> Level

The aggregated 11<sup>th</sup> price level is available to DP clients who use the 10BBO+11 representation and it shows total order volume beyond the 10<sup>th</sup> level. In the following example a Bid Order (Quantity 200) is added at price level 9640 to the orderbook shown above. As a result a new price level is sent.

| DP     |                   |         |
|--------|-------------------|---------|
| Offset | Field Name        | Value   |
| 0      | MsgSize           | 60      |
| 2      | MsgType           | 53      |
| 4      | OrderbookID       | 1234    |
| 8      | Filler            | NULL    |
| 11     | NoEntries         | 2       |
| 12     | AggregateQuantity | 200     |
| 20     | Price             | NULL    |
| 24     | NumberOfOrders    | 1       |
| 28     | Side              | 0 (Bid) |
| 30     | PriceLevel        | 255     |
| 31     | UpdateAction      | 0 (New) |
| 32     | Filler            | NULL    |

The resulting order book should now be;

| DP         |                   |       |          |                   |            |
|------------|-------------------|-------|----------|-------------------|------------|
| Bid Side   |                   |       | Ask Side |                   |            |
| PriceLevel | AggregateQuantity | Price | Price    | AggregateQuantity | PriceLevel |

|     |     |      |      |     |   |
|-----|-----|------|------|-----|---|
| 1   | 50  | 9740 | 9760 | 500 | 1 |
| 2   | 700 | 9730 | 9770 | 200 | 2 |
| 3   | 350 | 9720 | 9780 | 100 | 3 |
| 4   | 150 | 9710 | 9790 | 150 | 4 |
| 5   | 250 | 9700 | 9850 | 300 | 5 |
| 6   | 100 | 9690 |      |     |   |
| 7   | 150 | 9680 |      |     |   |
| 8   | 50  | 9670 |      |     |   |
| 9   | 200 | 9660 |      |     |   |
| 10  | 100 | 9650 |      |     |   |
| >10 | 200 | NULL |      |     |   |

### Example 6 – Market Orders

Market Orders may arrive during the Pre-Open period. If a Calculated Opening Price (COP) is available then the COP Merge will be applied – see example 7 below. However, if a COP is not available (i.e. the order book is not crossed or not locked), then the following table demonstrates how market orders are displayed.

- One or more market orders are present on the Bid side (since Price Level 1 has a Price which is Null)
- There are no market orders present on the Ask side (since Price Level 1 has a Price which is not Null)
- The best bid limit order is at price 9710 and the best ask limit order is at 9720

| D-Lite     |                    |       |          |                    |            |
|------------|--------------------|-------|----------|--------------------|------------|
| Bid Side   |                    |       | Ask Side |                    |            |
| PriceLevel | Aggregate Quantity | Price | Price    | Aggregate Quantity | PriceLevel |
| 1          | 7900               | Null  | 9720     | 8200               | 1          |
| 2          | 7700               | 9710  | 9730     | 2000               | 2          |

### Example 7 – COP Merge

Certain series involve a Pre-Open period during which the order book may be merged to the calculated opening price. Taking the previous example as a starting point, imagine the following two events occur;

- A new bid limit order arrives at price 9720, quantity 1000
- A COP message arrives for price 9720

These two events mean that the order book will be modified as shown below. Note the following points;

- Best bid and best ask are now the same price (this is the COP price)
- Any limit orders at or better than the COP are aggregated into Price Level 1 and this includes any market orders
- Remaining limit orders which are worse than the COP are shown at Price Level 2 and below

| D-Lite     |                    |       |          |                    |            |
|------------|--------------------|-------|----------|--------------------|------------|
| Bid Side   |                    |       | Ask Side |                    |            |
| PriceLevel | Aggregate Quantity | Price | Price    | Aggregate Quantity | PriceLevel |
| 1          | 8900               | 9720  | 9720     | 8200               | 1          |
| 2          | 7700               | 9710  | 9730     | 2000               | 2          |

| 7          | 2500               | 9640  |          |                    |            |
| 8          | 1000               | 9620  |          |                    |            |
| 9          | 1000               | 9600  |          |                    |            |

#### Example 8 – Orderbook Clear

In certain failure scenarios the system may send an 'Orderbook Clear' message at which point clients should clear both Bid and Ask side orderbooks for the specified series. An example message is shown below.

Following an 'Orderbook Clear' message any existing orders for the series will be resent as normal to rebuild the current image.

| Field             | Value  |
|-------------------|--------|
| MsgSize           | 36     |
| MsgType           | 353    |
| Orderbook ID      | 123456 |
| Filler            | —      |
| NoEntries         | 1      |
| AggregateQuantity | 0      |
| Price             | 0      |
| NumberOfOrders    | 0      |
| Side              | 0      |
| Filler            | —      |
| PriceLevel        | 0      |
| UpdateAction      | 74     |
| Filler            | —      |

## 7. AUCTION PERIOD SPECIAL HANDLING

During the pre-opening period the level 2 orderbook messages that are disseminated are adjusted so that clients do not receive a crossed orderbook. Note that this special handling only applies to instruments which have an opening auction.

During auction session before the matching takes place, a Calculated Opening Price (364) message will be disseminated in the event of crossed book. In such case, Aggregated Order Book Update (353) messages will be sent to update the top price level of both sides with Price equalling the COP, Number of Orders and Aggregate Quantity including those of market orders and orders at prices at or better than the COP. See Example 7 in the previous section for details. If the book is not crossed then a Calculated Opening Price (364) will not be available, and any market orders will be displayed at Price Level 1. See Example 6 in the previous section for details.

In this way:

- D-Lite, DS and DP clients will receive orderbook messages that are adjusted using 'COP Merge' (details below)
- DF clients will not receive any order information as individual orders will not be sent during the auction session

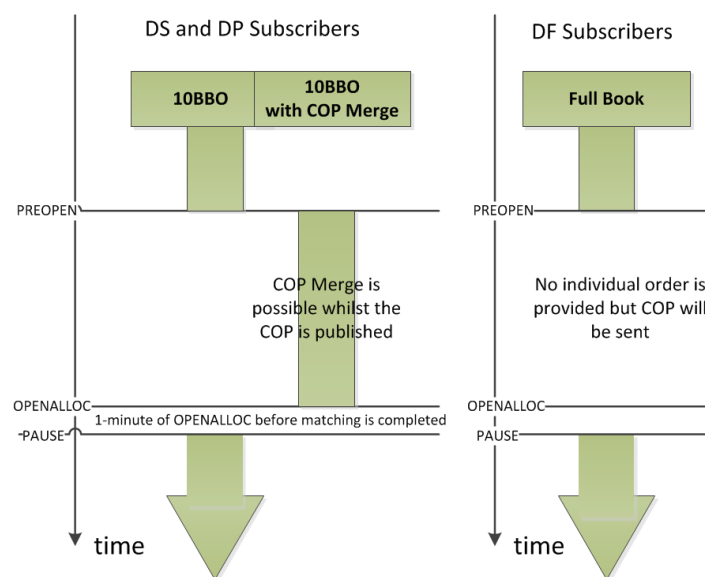

Figure 1 - Auction Period

### COP Merge

Bids with a price that is the same or greater than the COP will be shown at the COP price.

Offers with a price that is the same or less than the COP will be shown at the COP price.

## 8. HKEX DERIVATIVES MARKET

### 8.1 MARKET STATES

The market states and types of trading activity can take place in each state are explained below:

“AHT” means After Hour Trading Session.

| Status Code | Symbol            | Description                                        | Applicability                                                    | Session |
|-------------|-------------------|----------------------------------------------------|------------------------------------------------------------------|---------|
| 1           | OPENALLOC         | OPEN ALLOCATION SESSION                            | Markets with Pre-market Opening Period                           | Regular |
| 2           | CLOSE             | MARKET CLOSED                                      | Markets not tradable in T+1 Session                              | Regular |
| 3           | OPEN              | MARKET OPEN                                        | All markets                                                      | Regular |
| 4           | PREOPEN           | PREOPEN SESSION                                    | Markets with Pre-market Opening Period                           | Regular |
| 5           | PREOPENALLOC      | PREOPEN ALLOCATION SESSION                         | Markets with Pre-market Opening Period                           | Regular |
