1. INTRODUCTION

1.1 Purpose

This document specifies the Binary interface of the HKEX Orion Market Data Platform ("OMD") Securities Market & Index Datafeed Products.

This document is the Transmission Specification(s) of the relevant Datafeed(s) under your Market Data Vendor Licence Agreement, Market Data End-User Licence Agreement or Market Data Application Service Provider Licence Agreement ("Licence Agreement"). Please refer to Section 1.2, the summary table at Section 1.3 and Section 1.4 for the information applicable to the Datafeed(s) under your Licence Agreement.

HKEX endeavors to ensure the accuracy and reliability of the information provided in this interface specification, but takes no responsibility for any errors or omissions or for any losses arising from decisions, action, or inaction based on this information. The Licensee shall not use such interface specifications for any purpose other than as expressly permitted under the Licence Agreement. No part of this document may be copied, distributed, transmitted, transcribed, stored in a retrieval system, translated into any human or computer language, or disclosed to third parties without written permission from HKEX-IS.

1.2 READING GUIDE

The chapters following this introduction are:

Chapter 2: System Overview

Chapter 3: Message Formats

Chapter 4: Recovery

Chapter 5: Aggregated Order Book Management

Appendix A: List of Indices under OMD Index

All chapters and appendices except Chapter 3 and Appendix A are applicable to all Datafeeds unless otherwise specified. In Chapter 3, there are indications* in individual sections/sub-sections for their applicability to individual Datafeeds, and Appendix A is applicable to OMD Index only. The information is also summarised in Section 1.3 Summary Table.

1.4 SCOPE OF INFORMATION

HKEX Orion Market Data Platform – Securities Market & Index Datafeed Products ("OMD-C") provides real time trading information of all instruments listed and traded on the securities market, indices and market information to the Licensees.

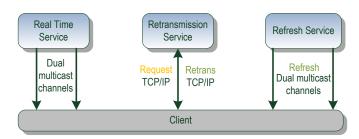

© Copyright 2019 HKEX

[▲] Complimentary service to the Datafeed(s).

2. SYSTEM OVERVIEW

2.1 SCOPE

Figure 1: Access to Market Data

OMD provides market data represented in an efficient binary message format for all instruments listed on the Securities Market. It has been designed for high throughput and low latency.

2.1.1 Multicast

Messages are published in a one-to-many fashion using the IP multicast and UDP transport protocols. Multicast is not a connection-oriented protocol. Data is sent strictly in one direction from server to clients.

2.1.2 **Dual Multicast Channels**

Due to the inherently unreliable nature of the UDP transport, packets may be lost or delivered out-of-order. To mitigate the risk of packet loss, the messages are duplicated and sent over two separate multicast channels (dual channels). Technically, a multicast channel corresponds to a multicast group.

Each pair of dual multicast channels has a unique identifier, which is referred to as the ChannellD.

More details regarding the configuration parameters (including IP addresses, port numbers corresponding to the multicast channels) will be found in a Connectivity Guide which will be provided at a later stage.

2.1.3 Recovery Mechanisms

OMD provides two recovery mechanisms:

- A retransmission server provides on request gap-fill retransmission of lost messages. The retransmission requests and gap-fill replies are point-to-point (TCP/IP connection).
- A refresh server provides snapshots of the market state at regular intervals throughout the business day. Snapshots are sent using multicast on separate channels for the real time messages.

2.2 Session Management

Each multicast channel maintains its own session. A session is limited to one business day. During this day the message sequence number is strictly increasing and therefore unique within the channel.

OMD-C does not operate on non-trading days of the Hong Kong Securities Market except those days when there are real-time index data calculated and disseminated by the index compiler. HKEX may perform system testing on Saturdays, Sundays or days when OMD-C is not in operation. Clients should treat data transmitted via OMD-C on those days as non production data and disregard them.

© Copyright 2019 HKEX 12/63

2.2.1 Start of Day

Housekeeping and system maintenance work may take place overnight until 6:00am. In this regard, Clients are advised to make connection to OMD Securities Market ("OMD-C") at or after 6:00am every business day to ensure that the data received from OMD-C are good for the start of the day. Please also refer to the OMD-C Developer's Guide for more information.

On each channel the first message at the start of the business day is the Sequence Reset message. The Sequence Reset message carries sequence number 1. On receipt of this message, the client must clear all cached data for all instruments.

The reference data for all markets, securities, liquidity providers and currency rates is published each day shortly after the start of day.

If a client starts listening after the start of business day and misses the Sequence Reset message and reference data, it must use the refresh service to recover and synchronize with the real time channels.

2.2.2 Normal Transmission

Normal order and trade message transmission in Securities Market Datafeed Products channels (i.e. SS, SP & SF) is expected between when the market opens for trading and when the market is closed. OMD will normally stop sending messages (including heartbeats) on all real-time and refresh channels around 6:30pm except the following channels untill End of Day:

- DR signal channels (channels 9 and 49)
- Real-time and Refresh channels from Thomson Reuters Channel (channels 44 and 544)

Heartbeats are sent around every 2 seconds on each channel whenever there is no activity.

2.2.3 End of Day

OMD will normally be shutdown shortly after 3:00am, next day across midnight. The shutdown time and the message stop sending time, however, are not rigid and the Exchange has the right to adjust this time according to the different trading situations.

2.2.4 Error Recovery

2.2.4.1 System Component Failure

If a system component fails and requires a failover or restart, there will be a short interruption in multicast dissemination from either Line A or Line B. The system is deployed in an active-active configuration with Line A and Line B being generated independently and so line arbitration will allow the client to continue receiving messages – see section 4 for more information about recovery.

2.2.4.2 Disaster Recovery

In the unlikely event of a disaster recovery situation at the primary site, OMD will be brought up at the disaster recovery (DR) site.

During the interruption, no data will be sent including heartbeats.

A Disaster Recovery (DR) Signal message indicating the DR status will also be sent on its dedicated channel when OMD is brought up – see section 3 for more information about the DR Signal message.

IP addresses and ports that have been provided for the disaster site's retransmission service should be used. See Connectivity Guide for more details.

© Copyright 2019 HKEX 13/63

2.3 TRADING SESSIONS

Normally, trading is conducted in auction trading session(s) and continuous trading session(s) every trading day. However, there are situations where there is only half day trading with fewer trading session(s) (Christmas eve, New Year eve and Chinese New Year eve), or a trading session is suspended due to a typhoon etc. OMD is not affected by the number of trading sessions and will continue to provide real time data as long as the Exchange's trading system is available.

2.4 RACE CONDITIONS

The information supplied in this section does not apply to OMD Index.

Due to the nature of the exchange matching system the real time order/trade data and reference data are disseminated via separate channels so users need to be aware that there is a race condition.

As an example the Trading Session Status (20) messages and market activity are decoupled; e.g. for a short time after a TradingSesStatus of "Halted" is reported realtime data for that same market may continue to arrive.

3. MESSAGE FORMATS

3.1 DATA TYPES

The information supplied in this section and its sub-sections applies to the Datafeed(s) marked with [●]

Section	OMD Securities Standard (SS)	OMD Securities Premium (SP)	OMD Securities FullTick (SF)	OMD Index (Index)
3.1				

The following table lists all the data types used by OMD.

Format	Description
String	ASCII characters which are left aligned and padded with spaces, unless otherwise specified
Uint8	8 bit unsigned integer
Uint16	Little-Endian encoded 16 bit unsigned integer
Uint32	Little-Endian encoded 32 bit unsigned integer
Uint64	Little-Endian encoded 64 bit unsigned integer
Int16	Little-Endian encoded 16 bit signed integer
Int32	Little-Endian encoded 32 bit signed integer
Int64	Little-Endian encoded 64 bit signed integer
Binary	Unicode encoding used for Chinese characters

3.1.1 Null Values

From time to time certain fields cannot be populated and specific values are used to represent null. This is currently used within Int64 fields of the Index Data (71) message.

Data Type	Null Representation	Example of Usage
Int64	0x8000000000000000 (Hex 2's complement) or -9223372036854775808 (Decimal)	HighValue, LowValue of Index Data (71)

3.1.2 Currency Values

Please refer to the Third Schedule of Rules of the Exchange in HKEX website for possible ISO-4217 Currency Codes used in OMD-C. Apart from the Currency Codes listed in the aforesaid Schedule, OMD-C will also use the Currency Code listed below:

Currency Code	Currency
CNH	Chinese Renminbi (Offshore)

HKEX may add or delete currency code(s), whenever applicable, in the future.

© Copyright 2019 HKEX 15/63

3.2 PACKET STRUCTURE

The information supplied in this section and its sub-sections applies to the Datafeed(s) marked with []

Section	OMD Securities	OMD Securities	OMD Securities	OMD Index
	Standard (SS)	Premium (SP)	FullTick (SF)	(Index)
3.2				

Multicast packets are structured into a common packet header followed by zero or more messages. Messages within a packet are laid out sequentially, one after another without any spaces between them.

Packet Header	Message 1	Message 2		Message n
---------------	-----------	-----------	--	-----------

The maximum length of a packet is 1500 bytes which includes the multicast headers, Packet Header and Messages.

The packet header provides information including the total packet length, the number of messages within the packet, the sequence number of the first message and a send timestamp.

A packet will only ever contain complete messages. A single message will never be fragmented across packets.

The format of each message within a packet will vary according to message type. However, regardless of the message type, each message will start with a two-byte message size (MsgSize) followed by a two-byte message type (MsgType). These are described in the following table.

Table 1: MsgSize and MsgType Fields

Field	Format	Len	Description
MsgSize	Uint16	2	Message length (including this field)
MsgType	Uint16	2	Type of message. The valid values for MsgType are below: Sequence Reset (100) Logon (101) Logon Response (102) Disaster Recovery Signal (105) Retransmission Request (201) Retransmission Response (202) Refresh Complete (203) Market Definition (10) Security Definition (11) Liquidity Provider (13) Currency Rate (14) Trading Session Status (20) Security Status (21) Add Order (30) Modify Order (31) Delete Order (32) Add Odd Lot Oder (33) Delete Odd Lot Order (34) Aggregate Order Book Update (53) Broker Queue (54) Order Imbalance (56) Trade (50) Trade Cancel (51) Trade Ticker (52) Closing Price (62) Nominal Price (40) Indicative Equilibrium Price (41) Reference Price (43)

© Copyright 2019 HKEX 16/63

Field	Format	Len	Description
			VCM Trigger (23) Statistics (60) Market Turnover (61) Yield (44) News (22) Index Definition (70) Index Data (71) Stock Connect Daily Quota Balance (80) Stock Connect Market Turnover (81)

3.3 PACKET HEADER

The information supplied in this section and its sub-sections applies to the Datafeed(s) marked with []

Section	OMD Securities Standard (SS)	OMD Securities Premium (SP)	OMD Securities FullTick (SF)	OMD Index (Index)
3.3	•			•

All packets will begin with a common packet header.

Offset	Field	Format	Len	Description
0	PktSize	Uint16	2	Size of the packet (including this field)
2	MsgCount	Uint8	1	Number of messages included in the packet
3	Filler	String	1	
4	SeqNum	Uint32	4	Sequence number of the first message in the packet
8	SendTime	Uint64	8	The number of nanoseconds since midnight Coordinated Universal Time (UTC) of January 1, 1970, precision is provided to the nearest millisecond
Packet le	ength		16	

3.4 CONTROL MESSAGES

The information supplied in this section and its sub-sections applies to the Datafeed(s) marked with [•]

Section	OMD Securities	OMD Securities	OMD Securities	OMD Index
	Standard (SS)	Premium (SP)	FullTick (SF)	(Index)
3.4				

3.4.1 Heartbeat

Heartbeats consist of a packet header with MsgCount set to 0. They do not carry a sequence number and therefore do not increment the sequence number of the multicast channel. SeqNum is set to the sequence number of the previous message sent on the channel.

The Heartbeat message will be identical for all the services.

3.4.2 Sequence Reset (100)

The Sequence Reset message is sent on each multicast channel at start of day. It may also be sent when there is a need for the rectification of stock reference data before market open.

The client must ignore the sequence number of the Sequence Reset message itself, and set the next expected sequence number to NewSeqNo. The client may receive multiple sequence reset messages from all channels. Whenever the

© Copyright 2019 HKEX 17/63

Sequence Reset message is received, clients must clear all cached data for all instruments traded in the Cash Market and indices and then subscribe to the refresh channels to receive the current state of the market.

Message Fields

Offset	Field	Format	Len	Description	Values
0	MsgSize	Uint16	2	Size of the message	
2	MsgType	Uint16	2	Type of message	100 Sequence Reset
4	NewSeqNo	Uint32	4	New sequence number	Always set to 1
Total Ler	ngth		8		

3.4.3 Disaster Recovery Signal (105)

The Disaster Recovery (DR) Signal message is sent on a dedicated multicast channel (DR channel) whenever site failover is triggered. In normal situation, the dedicated DR channel only carries Heartbeat till end of business day.

When site failover begins, DR Signal is sent with "DRStatus=1" indicating that the DR process has been activated. Clients should then clear all cached market data and prepare their own system for the site failover. When the site failover process finishes, DR Signal will be sent with "DRStatus=2" thereupon clients could start rebuild the latest market image from the refresh service. The same DR Signal will be sent periodically until end of business day.

Message Fields

Offset	Field	Format	Len	Description	Values
0	MsgSize	Uint16	2	Size of the message	
2	MsgType	Uint16	2	Type of message	105 DR Message
4	DRStatus	Uint32	4	Status during site failover	1 DR in progress 2 DR completed
Total Lei	ngth		8		

3.5 RETRANSMISSION

The information supplied in this section and its sub-sections applies to the Datafeed(s) marked with [•]

Section	OMD Securities	OMD Securities	OMD Securities	OMD Index
	Standard (SS)	Premium (SP)	FullTick (SF)	(Index)
3.5				

Refer to Retransmission service for details on the retransmission messages.

Note that when the Logon (101) or Retransmission Request (201) messages are sent to the OMD server, the client must also include a packet header as shown below:

Offset	Field	Format	Len	Values	Notes
0	PktSize	Uint16	2	32	16 bytes for this header plus 16 bytes for either the Logon (101) or Retransmission Request (201) message
2	MsgCount	Uint8	1	1	One message only

© Copyright 2019 HKEX 18/63

Offset	Field	Format	Len	Values	Notes
3	Filler	String	1		Empty Filler
4	SeqNum	Uint32	4	0	The field is not used
8	SendTime	Uint64	8	0	The field is not used

After this header, the fields for either Logon (101) or Retransmission Request (201) should follow.

Also note that the same header is used by the RTS server when sending either Logon Response (102) or Retransmission Response (202) messages to clients. Again in this case the SeqNum and SendTime fields are not relevant and can be discarded.

3.5.1 Logon (101)

The Logon message enables client authentication. This is not required for multicast channels and is only used to for retransmission requests.

Normal operation: Client sends a Logon message containing username to the OMD, which responds with a Logon Response message with the SessionStatus set to 0 (Session Active).

Message Fields

Offset	Field	Format	Len	Description	Values
0	MsgSize	Uint16	2	Size of the message	
2	MsgType	Uint16	2	Type of message	101 Logon
4	Username	String	12	Username to log on, padded with binary null characters	
Total Length		16			

3.5.2 Logon Response (102)

Message Fields

Offset	Field	Format	Len	Description	Values

3.7.4 Currency Rate (14)

The Currency Rate message provides the foreign exchange conversion rates between various foreign currencies and the Hong Kong dollar.

The Currency Factor and Currency Rate fields should be interpreted as below:

For example if 1 Euro is valued 10.22 HKD

- Currency Factor will be 0 (1 EUR)
- Currency Rate will be 102200 (4 decimals implied)

For example if 1000 Japanese Yen is worth 90.678 HKD

- Currency Factor will be 3 (1000 JPY)
- Currency Rate will be 906780 (4 decimals implied)

Message Fields

Offset	Field	Format	Len	Description	Values
0	MsgSize	Uint16	2	Size of the message	
2	MsgType	Uint16	2	Type of message	14 Currency Rate
4	CurrencyCode	String	3	Currency code	See Currency Values in section 3.1.2 for full details
7	Filler	String	1		
8	CurrencyFactor	Uint16	2	Currency factor conversion.	A non-zero value n means all price fields for this security should be interpreted as a value equal to the price multiplied by 10^n
10	Filler	String	2		
12	CurrencyRate	Uint32	4	Currency rate	Rate, expressed in HKD for one foreign currency unit. 4 decimals implied.
Total Length		16			

3.8 STATUS DATA

3.9.7 **Broker Queue (54)**

The information supplied in this section and its sub-sections applies to the Datafeed(s) marked with []

Section	OMD Securities Standard (SS)	OMD Securities Premium (SP)	OMD Securities FullTick (SF)	OMD Index (Index)
3.9.7		A	A	
		(via complimentary conflated broker queue feed)	(via complimentary conflated broker queue feed)	

▲ Complimentary service to the Datafeed(s)

The Broker Queue message contains the priority list of the (max) top 40 broker IDs for a given side, and is generated whenever any of the entries in the list are modified. Entries are ordered according to distance away from the best price with best price brokers being at the front of the queue. The queue will also include spread level entries between each price level, which are marked when the Type field is set to 'S'. When the Type field is set to 'S', there are two possibilities;

- The Item is non-zero indicating the number of spread levels away from the best price
- The Item is zero indicating that there are no brokers with orders at the spread level indicated by the previous entry of Type set to 'S'

Example: if the active offers are as below, and assuming a spread level is 0.01:

Ask Price	Broker ID
20.28	2137
20.28	4138
20.29	2141

Туре	В	В	S	В	В	S	S	S	В

The Conflated Broker Queue Feed ("CBQ") which is included in SS (OMD Securities Standard), is provided to the Licensee of SP (OMD Securities Premium) as a complimentary service. The service provides broker queue information in conflated mode whilst SP provides market data in streaming mode. The service level between CBQ and SP is therefore inherently different by nature and the information in these two products is not synchronized. Licensed vendors are therefore reminded that if they plan to provide the CBQ along with the market depth available from SP, appropriate disclaimers and warnings should be provided to subscribers highlighting the service level difference.

3.11 VALUE ADDED DATA

3.11.1 Statistics (60)

The information supplied in this section and its sub-sections applies to the Datafeed(s) marked with []

Section	OMD Securities	OMD Securities	OMD Securities	OMD Index
	Standard (SS)	Premium (SP)	FullTick (SF)	(Index)
3.11.1				

The Statistics message provides statistics including volume-weighted average price and turnover. It is generated, excluding overseas trades, once after:

- all corresponding trades matched in Continuous Trading Session (CTS) or in an auction session
- manual trade
- odd lot trade
- trade cancel

Note that the 'VWAP' field is not populated for SS (OMD Securities Standard) clients.

The ShortSellSharesTraded and ShortSellTurnover fields (the shortsell fields) are only updated twice each day at most for securities with shortselling activities - at the end of the morning session if the shortsell fields are non-zero and at the end of the afternoon session if the value of any of the shortsell fields are different from that disseminated at the end of the morning session.

Message Fields

Offset	Field	Format	Le n	Description	Values
0	MsgSize	Uint16	2	Size of the message

4. RECOVERY

OMD provides three different mechanisms for recovering missed data:

- Line arbitration using dual multicast channels (Line A and Line B)
- Retransmission Server recovery of a limited number of messages
- Refresh Server snapshot of current market state

These mechanisms should be used as described in the following table.

Table 2: Recovery Mechanisms

Event	Action
Packet lost on one either Line A or Line B	Try to recover data from the other line with a configurable timeout ("arbitration mechanism").
Dropped packet(s) on both Line A and Line B	Recover dropped message(s) from the Retransmission Server.
Late start up or extended intraday outage	Wait for a refresh of the current market state and then continue with real time messages.

4.1 GAP DETECTION

Each packet provides the sequence number (SN) of the first message it contains. This sequence number starts at 1 and increases with each subsequent message.

The sequence numbers provided in every packet header is calculated by adding the previous sequence number and the message count, as shown in table below:

Table 3: Sequence Number Calculation

Packet	Sequence Number	Message Count
Packet 1	1	4
Packet 2	5	2
Packet 3	7	1
Packet 4	8	3
Packet 5	11	1

If the client drops the first five packets they would request a gap fill for messages 1-11.

All messages conform to the message level sequencing. Each channel has its own sequence number. This allows recipients to detect gaps or duplicates in each message sequence number and, if appropriate, reconcile them (line arbitration) with the primary or secondary multicast groups or request retransmission of the missing / corrupted messages.

Users should use this sequence number to detect gaps in the transmission of messages.

The following diagram illustrates how the message sequence number should be used to detect gaps in the feed.

© Copyright 2019 HKEX 47/63

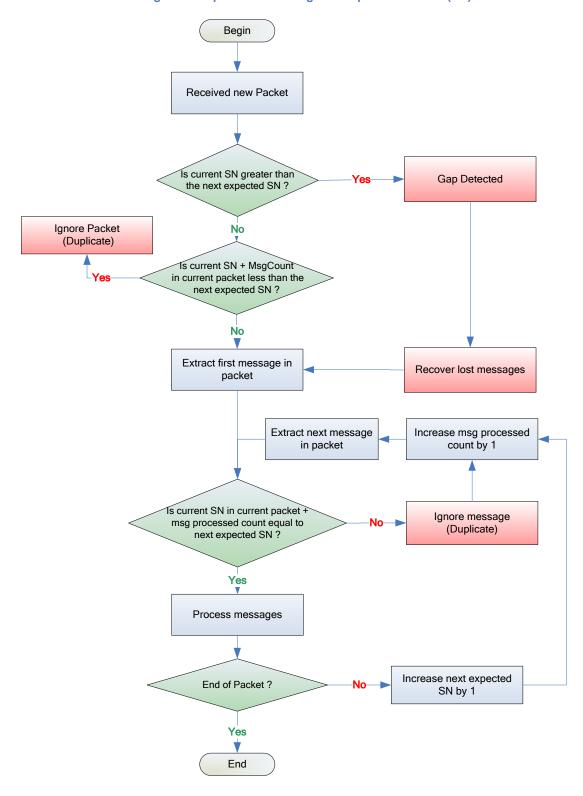

Figure 2: Gap Detection using the Sequence Number (SN)

4.2 LINE ARBITRATION

Client applications should check the sequence number (SN) and message count (MC) for every packet received. SNs are unique and increase monotonically for each service, the MC indicates the number of messages within each packet.

Line A and Line B are identical in terms of:

© Copyright 2019 HKEX 48/63

- SNs
- Messages that are sent
- Sequence in which messages are sent

However it is not guaranteed that a packet content between Line A and Line B will be the same. For example the third packet of the day from the Line A could contain SN 10 with MC 3, whereas the third packet of the day from Line B could contain SN 9 with MC 4. For this reason clients must arbitrate on SN (at the message level) rather than packet content. Client applications should listen to both Line A and Line B in real-time. Clients should look at packets coming from both lines and process the ones that arrive first, regardless of whether they came from Line A or Line B. It is advisable to apply the "first come – first served" rule.

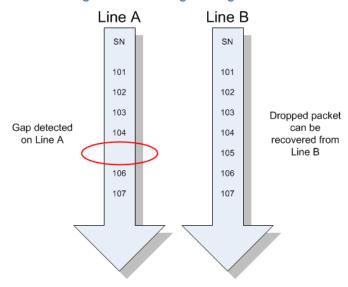

Figure 3 - Detecting Missing Packets

Additional Notes:

- The above example of a dropped packet is a simplified example assuming 1 message per packet, in reality each
 packet is likely to contain multiple messages
- Whilst the order of individual messages between Line A and Line B will be identical, there is no guarantee that the
 packets will contain exactly the same messages.
- In the example below, three packets are sent on each line, but message 'OrderUpdate3' appears in one packet from Line A but in the subsequent packet on Line B.

Primary					
Messages	MC	SN			
OrderUpdate1 OrderUpdate2 OrderUpdate3	3	101			
Trade1 OrderUpdate4	2	104			
Trade2 Statistics1	2	106			

Figure 4 - Normal Message Delivery

Secondary						
SN	MC	Messages				
101	2	OrderUpdate1 OrderUpdate2				
103	3	OrderUpdate3 Trade1 OrderUpdate4				
106	2	Trade2 Statistics1

4.3 RETRANSMISSION SERVICE

The retransmission service is provided via the TCP/IP protocol and is designed to allow clients to recapture a small number of missed messages already published on the real time channels.

It is not intended that clients use the retransmission server to recover data after long outages or on late start up (in these situations, clients should use the Refresh service). To that end, it supports the retransmission of the last 50,000 messages per multicast channel only. The sequence range of messages that a client can request and the number of retransmission requests permitted per day is also limited.

The following diagram illustrates the message flow during a retransmission session:

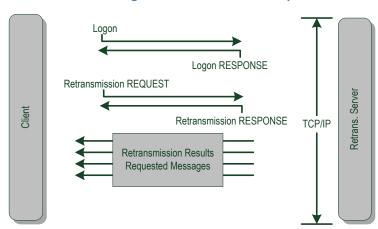

Figure 5: Retransmission Request

Logon

The client establishes a TCP/IP connection and initiates a session by sending the Logon message. Once the client is authenticated the server will respond immediately with the Logon Response message. If the client does not send a Logon message within the logon timeout interval, the server will close the connection.

Logons may be rejected for the following reasons:

- Invalid username
- User already connected

In all cases the server will close the connection after sending the Logon Response message.

Making a request

The client can make a retransmission request by sending the Retrans Request message. The server will respond with a Retrans Response message to indicate whether the request has been accepted or not.

In the case of a successful request the server will send the requested messages immediately after the Retrans Response message.

The sequence numbers will be the same as when they were first sent on the real time multicast channel. The framing of the retransmitted messages into a packet may differ from the original transmission.

Retransmission requests may be rejected for the following reasons:

- Unknown channel ID or illegal (not authorized)
- Messages not available
- Exceeds maximum sequence range

© Copyright 2019 HKEX 50/63

Exceeds maximum requests in a day

In the case where the client has exceeded the maximum number of requests allowed in a day, the server will close the connection after sending the Retrans Response message.

The following diagram is a guideline of the flow of logic when making a request:

Contact Helpdesk No Logon to the Retransmission use the Refresh Is the logon accepted? Server Yes No Send a Retransmission Request Can the request be Do the received msgs No Channel ID reformulated based on rejec fill the gap? BeginSeqNum EndSeqNum Close the TCP/IP connection to the retransmission server or maintain TCP/IP connection to the Is the retransmission Examine retransmission server and respond request accepted? RejectReason to heartbeats as required

Figure 6: Requesting Dropped Packets

Multiple requests and concurrent sessions

Clients can send multiple requests during a session and can keep the session open during idle periods by responding to heartbeats sent by the server. Concurrent sessions however will not be supported. Each user can only have one session open at a time.

If a client makes multiple requests, the server will process them serially. Clients are unable to cancel outstanding requests.

Heartbeats

To determine the health of the user connection on the TCP/IP channel, the Retransmission Server will send regular heartbeat packets to the user. The heartbeat frequency is 30 seconds. The client application must respond with a "Heartbeat Response" packet. The time out for this heartbeat response packet is set at 5 seconds. If no response is received by the server within this timeframe, the TCP/IP session will be disconnected.

Heartbeat Response

Heartbeat Response

Figure 7: Retransmission Server Heartbeat Message

A "heartbeat response" packet consists in an exact copy of the incoming heartbeat packet.

Closing the session

Sessions should be terminated by gracefully closing the TCP/IP connection.

© Copyright 2019 HKEX 51/63

System limits

The system limits mentioned above are set as follows:

System Limit	Value
Last number of messages available per channel ID	50,000
Maximum sequence range that can be requested	10,000
Maximum number of requests per day	1,000
Logon timeout (seconds)	5
Heartbeat interval (seconds)	30
Heartbeat response timeout (seconds)	5

Please note that the maximum number of requests per day limit is across all channels.

High availability

For each site, two sets of IP address and port are provided for the retransmission service in order to facilitate high availability. Clients may connect to both retransmission servers at the start of the day and maintain the connection during the day by responding to heartbeats.

In the event that Retransmission Server A (RTS A) does not respond to a logon or retransmission request, Retransmission Server B (RTS B) should be used.

In the event of a failure of either RTS A or RTS B, there may be a short period of unavailability. This failure should be detected by clients through the loss of connection. In this case the other RTS should be used.

RTS B should not be used as a means of requesting from two sources at the same time.

Disaster recovery

Two sets of backup IP address and port are also provided for the disaster site's retransmission service.

During normal conditions the retransmission service at the disaster site is not available. If clients attempt to connect, this will fail.

In the unlikely event of a disaster recovery situation, the retransmission service at the disaster site will be brought up and clients may connect via the backup IP addresses and ports.

4.4 REFRESH SERVICE

The refresh service is designed to allow clients to recover from a large scale data loss. This can happen after a late start or during a major outage.

Synchronization is on a per channel basis. For each real time multicast channel, there exists a corresponding refresh multicast channel on which snapshots of the market state are sent at regular intervals throughout the business day until the time as stated in Section 2.2.2 for various channels.

Market state

A snapshot of the market state is described in the table below.

Message	Snapshot description
Market Definition	Latest market static message for each market.
Security Definition	Latest security static message for each security.
Liquidity Provider	Latest liquidity provider message for each security.
Trading Session Status	Latest trading session status message for each market.

© Copyright 2019 HKEX 52/63

Message	Snapshot description
Security Status	Security Status message for halted securities and securities resumed trading with status changed to 'resumed' on the current trading day.
VCM Trigger	Latest VCM Trigger message for each VCM applicable security with cooling off period trigged by VCM.
Add Order	Snapshot for all non-empty books.
Add Odd Lot Order	Snapshot for all non-empty books.
Aggregate Order Book Update	Snapshot for all non-empty books. Occasionally Aggregated Order Book Update messages will be sent for emptied order books after cancellation or matching of all outstanding orders. In such cases the value of the NoEntries will be "0".
Broker Queue	Snapshot for all non-empty books. Occasionally Broker Queue messages will be sent for emptied broker queues after cancellation or matching of all outstanding orders. In such cases the value of the ItemCount will be "0".
Order Imbalance	Latest Order Imbalance for each CAS applicable security.
Closing Price	Closing Price message if available for each security.
Indicative Equilibrium Price	Latest Indicative Equilibrium Price message for each security.
Nominal Price	Latest Nominal Price message for each security.
Reference Price	Latest Reference Price for each security.
Statistics	Latest Statistics message for each security.
Market Turnover	Latest Market Turnover message per market / currency pair.
Currency Rate	Latest Currency Rate message for each currency.
News	All News messages.
Index Definition	Latest Index Definition message for each index.
Index Data	Latest Index Data message for each index.
Yield	Latest Yield message generated for bond securities when their yield percentage last changed
Stock Connect Daily Quota Balance	Latest Stock Connect Daily Quota Balance for each Stock Connect Program
Stock Connect Market Turnover	Latest Stock Connect Market Turnover for each Stock Connect Program and trading direction.

Refresh complete

A Refresh Complete message is sent at the end of a snapshot indicating the sequence number with which the snapshot is synchronized.

Snapshot processing

Below is an overview of the steps to carry out in order to process a channel snapshot.

- Subscribe to the real time multicast channel and cache received messages.
- Subscribe to the corresponding refresh multicast channel and discard messages until the Refresh Complete message is received.
- Process received messages until the next Refresh Complete message is received.
- Store the LastSeqNum sequence number provided in the Refresh Complete.
- Unsubscribe to the refresh multicast channel.
- Discard the cached real time messages with sequence number less than or equal to LastSeqNum.
- Process the remaining cached real-time messages and resume normal processing.

Missed messages

The retransmission server does not support refresh channels. If a client misses messages, it must wait for the next snapshot. Similarly if a client starts listening during the middle of a snapshot, it must wait for the next snapshot.

© Copyright 2019 HKEX 53/**63**

AGGREGATE ORDER BOOK MANAGEMENT

Book Identification

For each security there exists an odd lot book and a board lot book in the trading system. A book is therefore uniquely identified by SecurityCode.

Partial Price Depth

Securities shall be traded in accordance with the scale of spreads set out in the Second Schedule of the Rules of the Exchange respective to the Spread Table Code specified in their Securities Definition message. The tick level provides information on how many spreads from the best price for an order price whereas a price level is assigned to each price existing in the OMD order book. An order price with tick level 1 means the order price is the best price, a tick level of 2 means the order price is one spread from the best price, etc. The Aggregate Order Book Update message sends out the price level but not the tick level.

The concept of tick and price levels is illustrated in the table below, assuming that the best bid price of a security is 9800 and the spread is 10 for this price range. In the table there are orders in 5 bid prices so the number of price levels is 5 (contiguous price levels from 1 to 5); these orders are distributed over 10 spreads (tick levels) so the tick levels are from 1 to 10. Taking orders with bid price 9710 as example, it is the 5th price in the book so the price level will be 5 and it is 9 spreads from the best bid price so the tick level will be 10.

	В	id Side	
Tick	PriceLevel	AggregateQuantity	Price
1	1	700	9800
2	2	350	9790
3			
4			
5	3	150	9760
6			
7			
8			
9	4	250	9720
10	5	100	9710

OMD provides a view of 10 tick depths of the aggregate order book for securities market and does not provide updates on price levels which are more than 9 spreads away from the best price. This view can be visualized as a number of rows in a table for each of the bid and ask sides. On each side there are a number of rows showing the aggregate quantity available at a number of price levels and tick levels.

	В	id Side			Ask Sid	е	
Tick	PriceLevel	AggregateQuantity	Price	Price	AggregateQuantity	PriceLevel	Tick
1	1	700	9730	9760	500	1	1
2	2	350	9720	9770	300	2	2
3	3	150	9710	9780	100	3	3
4	4	250	9700	9790	150	4	4
5	5	100	9690				5
6	6	150	9680				6
7	7	50	9670				7
8	8	200	9660				8
9	9	100	9650				9
10					_		10

OMD only sends updates within the 10 tick levels in the aggregate order book except for Explicit Deletion (please refer Example 5 illustrated below for details)

© Copyright 2019 HKEX 54/63

Book Updates

Book update messages are generated by OMD as delta messages defined in section 3.9.6 (Aggregate Order Book Update (53)). Each message may contain any combination of new, changed or deleted entries for a book. The nature of an entry is defined by its UpdateAction.

New, to create/insert a new price level

Delete, to remove a price level

Change, to update aggregate quantity at a price level

Orderbook Clear, to inform users that all price levels should be cleared

Example 1 – Quantity Reduction and Explicit Addition

For example suppose the Ask order at price level 9770 is reduced in quantity and at the same time a new order is added at price level 9850, then the following message is sent;

Offset	Field Name	Value
0	MsgSize	60
2	MsgType	53
4	SecurityCode	1234
8	Filler	NULL
11	NoEntries	2
12	AggregateQuantity	200
20	Price	9770
24	NumberOfOrders	1
28	Side	1 (Offer)
30	PriceLevel	2
31	UpdateAction	1
32	Filler	NULL
36	AggregateQuantity	300
44	Price	9850
48	NumberOfOrders	1
52	Side	1 (Offer)
54	PriceLevel	5
55	UpdateAction	0
56	Filler	NULL

The resulting book should now be as follows:

	В	id Side			Ask Sid	е	
Tick	PriceLevel	AggregateQuantity	Price	Price	AggregateQuantity	PriceLevel	Tick
1	1	700	9730	9760	500	1	1
2	2	350	9720	9770	200	2	2
3	3	150	9710	9780	100	3	3
4	4	250	9700	9790	150	4	4
5	5	100	9690				5
6	6	150	9680				6
7	7	50	9670				7
8	8	200	9660				8
9	9	100	9650				9
10				9850	300	5	10

© Copyright 2019 HKEX 55/63

Example 2 - Implicit Level Adjustments

The client must adjust the price level of entries below deleted or inserted entries. Potential level adjustments must be carried out after each single entry in Aggregate Order Book message.

For example, if a bid order with price 9740 and quantity 50 is added to the order book above, it will cause the following message to be sent:

Offset	Field Name	Value
0	MsgSize	36
2	MsgType	53
4	SecurityCode	1234
8	Filler	NULL
11	NoEntries	1
12	AggregateQuantity	50
20	Price	9740
24	NumberOfOrders	1
28	Side	0 (Bid)
30	PriceLevel	1
31	UpdateAction	0
32	Filler	NULL

After processing this message, the client's book should look as follows:

	В	id Side			Ask Sid	е	
Tick	PriceLevel	AggregateQuantity	Price	Price	AggregateQuantity	PriceLevel	Tick
1	1	50	9740	9760	500	1	1
2	2	700	9730	9770	200	2	2
3	3	350	9720	9780	100	3	3
4	4	150	9710	9790	150	4	4
5	5	250	9700				5
6	6	100	9690				6
7	7	150	9680				7
8	8	50	9670				8
9	9	200	9660		_		9
10	10	100	9650	9850	300	5	10

Price levels of the other 9 Bid orders must all be incremented although there will not be Aggregate Order Book Update messages sent for the increment.

Example 3 – Implicit Deletions

If a new book entry causes the bottom entry of a book to be shifted out of the book (i.e. more than 9 spreads away from the best price), the client must delete the excess entry. If the book shrinks again, the server resends the entries that have temporarily fallen out.

For example, if a bid order with price 9750 and quantity 250 is added to the book above, and the bid quantity at price 9660 is reduced from 200 to 150, it will cause the following message to be sent:

Offset	Field Name	Value
0	MsgSize	60
2	MsgType	53

4 SecurityCode 1234 8 Filler NULL 11 NoEntries 2 12 AggregateQuantity 250 20 Price 9750 24 NumberOfOrders 1 28 Side 0 (Bid) 30 PriceLevel 1 31 UpdateAction 0 32 Filler NULL 36 AggregateQuantity 150 44 Price 9660 48 NumberOfOrders 1 52 Side 0 (Bid) 54 PriceLevel 10 55 UpdateAction 1 56 Filler NULL

36 AggregateQuantity 150 44 Price 9660 48 NumberOfOrders 1 52 Side 0 (Bid) 54 PriceLevel 10 55 UpdateAction 1	31	UpdateAction	0	
44 Price 9660 48 NumberOfOrders 1 52 Side 0 (Bid) 54 PriceLevel 10 55 UpdateAction 1	32	Filler	NULL	
48 NumberOfOrders 1 52 Side 0 (Bid) 54 PriceLevel 10 55 UpdateAction 1	36	AggregateQuantity	150	
52 Side 0 (Bid) 54 PriceLevel 10 55 UpdateAction 1	44	Price	9660	
54 PriceLevel 10 55 UpdateAction 1	48	NumberOfOrders	1	
55 UpdateAction 1	52	Side	0 (Bid)	
	54	PriceLevel	10	
56 Filler NULL	55	UpdateAction	1	
	56	Filler	NULL	

After processing this message, the client's book should look as follows:

	В	id Side			Ask Sid	е	
Tick	PriceLevel	AggregateQuantity	Price	Price	AggregateQuantity	PriceLevel	Tick
1	1	250	9750	9760	500	1	1
2	2	50	9740	9770	200	2	2
3	3	700	9730	9780	100	3	3
4	4	350	9720	9790	150	4	4
5	5	150	9710				5
6	6	250	9700				6
7	7	100	9690				7
8	8	150	9680				8
9	9	50	9670		_		9
10	10	150	9660	9850	300	5	10

Price 9750 and quantity 250 is added according to the message.

Price 9650 and quantity 100 must be deleted by the client.

Price 9660 quantity must be reduced to 150 – PriceLevel 10 is used in the incoming message to reflect the new price level of the price 9660 after the addition of the price 9750.

Example 4 – Explicit Additions

If a match causes an order to be removed so that there are now less than 10 levels visible then the server will also automatically send the additional level(s) that are now revealed.

For example, if the bid order with price 9750 and quantity 250 is now removed from the book above and this reveals an 11th level which needs to be disseminated then it will cause the following message to be sent:

57/63

Offset	Field Name	Value
0	MsgSize	60
2	MsgType	53
4	SecurityCode	1234
8	Filler	NULL

11	NoEntries	2	
12	AggregateQuantity	250	
20	Price	9750	
24	NumberOfOrders	1	
28	Side	0 (Bid)	
30	PriceLevel	1	
31	UpdateAction	2	
32	Filler	NULL	
36	AggregateQuantity	100	
44	Price	9650	
48	NumberOfOrders	1	
52	Side	0 (Bid)	
54	PriceLevel	10	
55	UpdateAction	0	
56	Filler	NULL	

The resulting order book should now be;

	Bid Side			Ask Side				
Tick	PriceLevel	AggregateQuantity	Price	Price	AggregateQuantity	PriceLevel	Tick	
1	1	50	9740	9760	500	1	1	
2	2	700	9730	9770	200	2	2	
3	3	350	9720	9780	100	3	3	
4	4	150	9710	9790	150	4	4	
5	5	250	9700				5	
6	6	100	9690				6	
7	7	150	9680				7	
8	8	50	9670				8	
9	9	200	9660				9	
10	10	100	9650	9850	300	5	10	

Example 5 – Explicit Deletions

Suppose a new book entry causes the last tick entry (Tick 10 in the previous order book in Example 4) to be shifted out of the book, if the shifted out entry is within 10 price level, OMD will send an explicit deletion for the entry. If the shifted out entry is outside the 10 price level, OMD will not send further updates on that price and the client must delete the excess entry (please refer to Example 3 above for details) to ensure their order book will not keep out-dated information.

For example, if an ask order with price 9750 and quantity 300 is added to the order book above, it will cause the following message to be sent:

Offset	Field Name	Value
0	MsgSize	60
2	MsgType	53
4	SecurityCode	1234
8	Filler	NULL
11	NoEntries	2
12	AggregateQuantity	300
20	Price	9750
24	NumberOfOrders	1
28	Side	1 (Offer)

© Copyright 2019 HKEX 58/**63**

30	PriceLevel	1	
31	UpdateAction	0	
32	Filler	NULL	
36	AggregateQuantity	300	
44	Price	9850	
48	NumberOfOrders	1	
52	Side	1 (Offer)	
54	PriceLevel	6	
55	UpdateAction	2	
56	Filler	NULL	

The resulting order book should now be;

	В	id Side			Ask Sid	le	
Tick	PriceLevel	AggregateQuantity	Price	Price	AggregateQuantity	PriceLevel	Tick
1	1	50	9740	9750	300	1	1
2	2	700	9730	9760	500	2	2
3	3	350	9720	9770	200	3	3
4	4	150	9710	9780	100	4	4
5	5	250	9700	9790	150	5	5
6	6	100	9690				6
7	7	150	9680				7
8	8	50	9670				8
9	9	200	9660				9
10	10	100	9650				10

Explicit Deletions versus Implicit Deletions

Suppose initially bid orders are queued in 8 price levels in the aggregate order book and assume there is no order inputted at price 9770 & 9740. The aggregate order book will be as follows.

	Bid Side					
Tick	PriceLevel	AggregateQuantity	Price			
1	1	700	9800			
2	2	350	9790			
3	3	150	9780			
4						
5	4	250	9760			
6	5	100	9750			
7						
8	6	400	9730			
9	7	200	9720			
10	8	300	9710			

When new bid orders at 3 different prices (9860, 9850 & 9840) arrived, the resulting book will be changed as follows:

Bid Side						
Tick PriceLevel AggregateQuantity Price						
1	1	450	9860			
2	2	550	9850			
3	3	650	9840			

← new order, Explicit Addition

 $\leftarrow \text{new order, Explicit Addition}$

← new order, Explicit Addition

4			
5			
6			
7	4	700	9800
8	5	350	9790
9	6	150	9780
10			
11	7	250	9760
12	8	100	9750
13			
14	9	400	9730
15	10	200	9720
16	11	300	9710

- ← previous best bid, now at PriceLevel 4 (Tick 7), Implicit Level Adjustment
- \leftarrow previous $2^{\rm nd}$ best bid, now at PriceLevel 5 (Tick 8), Implicit Level Adjustment
- ← previous 3rd best bid, now at PriceLevel 6 (Tick 9), Implcit Level Adjustment
- \leftarrow orders exceed 10 Tick but within 10 PriceLevel, Explicit Deletion
- ← orders exceed 10 Tick but within 10 PriceLevel, Explicit Deletion
- ← orders exceed 10 Tick but within 10 PriceLevel, Explicit Deletion
- ← orders exceed 10 Tick but within 10 PriceLevel, Explicit Deletion
- ← orders exceed 10 Tick & exceed 10 PriceLevel, Implicit Deletion

Orders in shaded area which were originally within the 10 tick levels offered in OMD now fall outside the 10 tick levels. OMD will send Explicit Delete for orders which fall outside 10 tick levels but are within 10 price levels (i.e. entries highlighted in blue). However OMD will not send Explicit Delete for orders which are outside 10 price levels (i.e. entries highlighted in pink) and the client must delete the excess entries (i.e. Implicit Delete by the client).

The following message will be sent:

Offset	Field Name	Value
0	MsgSize	180

Example 6 – Orderbook Clear

In certain failure scenarios the system may send an 'Orderbook Clear' message at which point clients should clear both Bid and Ask side orderbooks for the specified security. An example message is shown below.

Following an 'Orderbook Clear' message any existing orders for the security will be resent as normal to rebuild the current image.

Offset	Field Name	Value

APPENDIX A - LIST OF INDICES AND MARKET INFORMATION UNDER OMD INDEX

The information supplied in this appendix applies to OMD Index only.

The indices supplied under the OMD Index are described in the table below, as it may be amended from time to time by HKEX-IS pursuant to clause 2.2 of the Licence Agreement. The mark [] specifies if an index disseminated under the OMD Index is Third Party Content under the Licence Agreement. Licensee shall refer to clause 10.6 of the Market Data Vendor Licence Agreement and notices issued by HKEX-IS from time to time for redistribution of Third Party Content.

The Index Source and Index Code in the table below include the source and code for market information.
