

ISSUER INFORMATION *feed* SERVICE ("IIS")

Transmission Specification

Version no.: 3.19 Date: 7 December 2022

Modification History

| Version | Date | Description and reason for modification |
|---------|--------------|---|
| 1.0 | 15 May 2002 | First Distribution Issue |
| 1.1 | 23 July 2002 | There are 3 major changes. The password encryption algorithm is changed from RSA public key cryptography to triple-DES symmetric key cryptography. This affects messages INITRESP, LOGONREQ and CHNGPWDREQ. The Vendor identity is removed from CHNGPWDREQ message since the session key generated is used as identity in the whole session. The signature in headline delivery message (UPDATEHEADLINE and RECVYHEADLINE) is removed. The RSA public key for signing embedded in message LOGONRESP is also removed. |
| 1.1.1 | 29 Oct 2002 | Lengthen the user id field from 8 to 10 |
| 1.2 | 29 Oct 2002 | Update announcement types |
| 1.3 | 9 July 2003 | Change name of specification from Message Interface Specification to Transmission Specification to be consistent with the name used in documents of other information services and Vendor agreements Clarify that entity of system owner belongs to the Exchange instead of HKEX so that we could maintain consistent system and Vendor agreement approach across all information services. Change from Vendor to Information Vendor to be consistent with IIS Testing Procedure and other system specifications Clarification on the number of lines/connections required under standard configuration and non-standard configuration. The IIS Vendor agreement requires Vendor effect the no. of connections as per requirement of the Transmission Specification. Clarification on the number of the Exchange connection ports provided for Information Vendor connections. The IIS Vendor agreement charges Port Fees according to number of connection ports specified in the Transmission Specification. Removal of SDI News which is no longer available after implementation of DI (Discloser of Interest) Project initiated by SFC on 1 April 2003. |
| 1.4 | 25 July 2003 | Add Expiry Date into DescriptiveMetaData Add Business Hours Add Non-standard Connection |
| 1.5 | 25 Nov 2003 | Change the expiry date to be the last day for the dissemination of the news instead of the first day for not disseminating of the news. Modify announcement types |
| 1.6 | 10 Jan 2004 | Add MISC announcement types |
| 1.7 | 7 May 2004 | Add Announcement Type "15250" – Proxy Form into MAIN Board |
| 1.8 | 30 June 2004 | Add Announcement Type "15250" – Proxy Form into GEM |
| 1.9 | 4 Aug 2004 | Change to provide only 1 day (instead of 2 days) online news for vendors Clarification on connection ports |
| 1.10 | 4 Jan 2005 | Revise the documentation for the purpose of clarification on appropriate areas. There is no technical change. 1. Add note for download of current day news message after successful logon to IIS (P.9). 2. Clarify the format of modifying the <descriptivemetadata> tag for multiple items (P.24 and P.48).</descriptivemetadata> 3. Clarify the Appendix C for Encryption & Decryption Algorithms on the use of Microsoft CryptoAPI in IIS (P.44). |
| 1.11 | 08 Aug 2006 | Implementation of No-Paid-Ad Project in first Half 20071. Change of IIS Operation Hours (section 2.2) |

| Version | Date | Description and reason for modification |
|--------------|---------------|---|
| | | 2. Clarify the possible behavior if duplicate logon is detected (sections 2.4.1, |
| | | 4.1.1) |
| | | 3. Add "Allocated Bandwidth" (section 3) |
| | | Implement IIS Secondary Site for disaster recovery purpose. (section 3). Add "Contingency Arrangement" (section 3.8) |
| | | 6. Removal of CONTINGENCY type for UPDATEHEADLINE tag (section |
| | | 4.2, 5.2.1 & Appendix A) |
| | | 7. Add <subject name=""> tags to provide file content description for multiple</subject> |
| | | attachment news (sections 4.2.1, 5.2.1 & Appendix A) |
| | | 8. Change of STATUSREQ interval (sections 2.4.4, 4.3.1) |
| | | 9. Update <descriptivemetadata> element to (a) add Stock Name, (b) include updated news information – Headline Category (included both Tier 1 and</descriptivemetadata> |
| | | Tier 2 News Categories representing the primary headline and secondary |
| | | headlines input by the listed issuers), and (c) remove the announcement type. (section 5.2.1 appendix F) [The existing 'headline'' will carry the |
| | | "Freetext" information, being the title of the announcement input by Listed |
| | | Issuers.] |
| | | 10. Increase the field length of ReqId from "999" to "999999". (Section 5) |
| | | 11. Change of field format of NewsItemId from "NNNNN" to "[X]*". (Section 5.2) |
| | | 12. Introduction of headline category amendment and amendment of CANCELLED news mechanism. (section 5.2.1) |
| | | 13. Section 6 – "Security and Control" added. |
| | | 14. Clarify the meaning of <noofcontentitem> tag and <datacontent> tag</datacontent></noofcontentitem> |
| | | (section 5.2.1).15. Clarify the exceptional handling when "Headline Sequence Number" is out |
| | | of sequence (section 4.1.6). |
| | | 16. Clarify the error code 90007 in Appendix E on Error Code Definition. |
| | | 17. Add error code 90014 in Appendix E on Error Code Definition. |
| 2.0 | 3 Nov 2006 | IIS Redevelopment (tentative rollout in late Q1/early Q2 2007): |
| 2.0 | 51107 2000 | 1. Replace message-based attachment delivery by file-based attachment |
| | | retrieval through implementation of IIS File Transfer Servers. (section 2, 4, |
| | | 5, Appendix A, D, E) |
| | | 2. Update on Line protocol and network structure for new File Transfer |
| | | Servers (section 3) |
| 2.0a | 30 Nov 2006 | 1. Update on handling of headline amendments (section 5.2.1) |
| | | 2. Updates on Headline Categories (Appendix F) |
| 2.0b | 22 Feb 2007 | Update the Amend message scenarios in section 5.2.1 |
| 2.00 | 22 Feb 2007 | 1. Update the Amend message scenarios in section 5.2.1 |
| 2.0c | 28 Feb 2007 | 1. Update the English description of Tier 1 code 80000 and Tier 2 code 17850. |
| 2.0d | 22 Mar 2007 | Update the Chinese description of Tier 2 code 19150 & 19600 Add Contingency Arrangement in Section 3.8 and respective guideline for |
| 2.0 u | 22 iviai 2007 | reading the CD-ROM in Appendix H. |
| | | 2. Update that dual live connections become the mandatory configuration |
| | | requirement for IIS. |
| | | 3. Update the description of Tier 2 code 12350 |
| 2.0e | 4 Jun2007 | 1. Update the English and Chinese description of Tier 1 code 90000 (Appendix F) |
| 2.0f | 15 Jun2007 | (Appendix F) 1. Remove the Tier 1 code of 60000 "Headline Category – [Document type to |
| 2.01 | 15 50112007 | be assigned]" (Appendix F) |
| 2.0g | 18 Jun 2007 | 2. Update the English and Chinese description of Tier 1 code 90000 |
| 2 | | (Appendix F) |

| Version | Date | Description and reason for modification | | |
|---------|--------------|--|--|--|
| 2.0h | 23 Jul 2007 | 1. Update the multiple file handling logic | | |
| 2.1 | 23 Jun 2008 | 1. Supplement for full recovery behavior in section 2.4.3 | | |
| | | 2. Requirement for IIS Certification Test in section 2.5 | | |
| | | 3. Minimum bandwidth and TCP Receive Buffer Size requirement in section 3 | | |
| | | 4. Automatic reconnection requirement in section 4.1.6 | | |
| | | 5. Add new Headline Category codes in Appendix F | | |
| 2.2 | 28 Nov 2008 | 1. Add new Headline Category codes in Appendix F | | |
| | | 2. Remove the word "Headline Category" and "標題類別" for description of | | |
| | | Tier 1 Headline Category Code in Appendix F | | |
| 2.3 | 20 Dec 2010 | 1. Add Section 2.6 for "Technical Requirements for Direct Connection | | |
| | | Vendors" | | |
| 2.4 | 12 Jan 2011 | 2. Add new Headline Category code in Appendix F | | |
| 2.5 | 17 Jan 2011 | 14. Update date folder structure of news attachment in Appendix H – | | |
| 2.10 | 1, 0411 2011 | Guideline on Reading the CD-ROM provided under Contingency | | |
| | | Arrangement | | |
| | | | | |
| 2.6 | 18 Nov 2011 | 14. Add Tier 2 code 15000, 12951, 12952, 12953, 12954, 12955, 12956, | | |
| | | 12957, 23500 | | |
| | | | | |
| 2.7 | 9 Feb 2012 | 1. Add Tier 1 code 55000 | | |
| 2.8 | 30 Nov 2012 | 1. Add Tier 2 code 17960, 19750 | | |
| | | 2. Amend Tier 2 code 19550 | | |
| | | | | |
| 2.9 | 19 Dec 2012 | 1. Add Tier 2 code 12958 & 40400 | | |
| | | 2. Amend Tier 1 code 40000 | | |
| | | 3. Amend Tier 2 code 17100, 17150, 25100 & 25200 | | |
| | | | | |
| 3.0 | 17 Jul 2013 | 1. Add Tier 1 code 91000 | | |
| | | 2. Add Tier 2 code 91100 | | |
| | | 3. Add Tier 2 code 91200 | | |
| | | | | |
| 3.1 | 6 Feb 2014 | 1. Modify Tier 2 code 19450, 19500 | | |
| | | 2. Add Tier 2 code 12959, 19760, 19770, 19780, 19790, 19800, 19810, 19820, | | |
| | | 19830, 19840, 19850, 19860 | | |
| 3.1-1 | 6 Mar 2014 | 1. Updates on testing hours arrangement in section 2,2 | | |
| | | 2. Modify Tier 2 code 19450, 19500 | | |
| | | | | |
| 3.2 | 13 Feb 2015 | 1. Add Tier 2 code 13750 & 13800 | | |
| | | 2. Amend Tier 2 code 18100 & 26200 | | |
| | | | | |
| 3.2-1 | 16 May 2016 | 1. Add Tier 1 code 81000 | | |
| | | | | |
| 3.2-2 | 23 Jun 2016 | 1. Various new Tier 2 codes in section F | | |
| | | 2. Restructure of Tier 1 and Tier 2 codes | | |
| | | | | |
| 3.3 | 15 Feb 2018 | Update the Chinese name of Tier 1 code 53000 and Tier 2 code 15600 | | |
| | | - | | |
| 3.4 | 29 Mar 2018 | Update EXN as headline category Tier 1 | | |
| 3.5 | 1 Feb 2019 | | | |
| | | Effective Date Changes | | |
| | | Update Chinese and English name of Tier 1 code 10000 | | |
| | | 1 Mar 2019 and Tier 2 code 13550 | | |
| | | | | |

| Version | Date | Description and reason for modification | | | |
|----------------|-------------|---|--|--|--|
| 3.6 | 11 Apr 2019 | | | | |
| | - | Effective Date | Changes | | |
| | | 14 July 2019 | Update Section 5.2.1, Appendix H to indicate the news headline and attachment are in Unicode Update Section 4.1.3 and Section 6 to specify the password requirement | | |
| 3.7 | 2 Jul 2019 | | | | |
| | | Effective Date | Changes | | |
| | | Immediate | 1. Appendix C – remove obsolete link reference to Triple-DES link | | |
| | | 14 July 2019 | 1. Appendix G – include additional file extensions | | |
| 3.8 | 22 Jul 2020 | | | | |
| | | Effective Date | Changes | | |
| | | Immediate | Update Section 3.8 Contingency Arrangement – replacement of CD by provision of a download link Update Appendix H Guideline on reading the IIS files provided under Contingency Arrangement – align with updated section 3.8 and update the sample details | | |
| | | 2 Aug 2020 | 1. Add Tier 2 Code 12050 | | |
| | | | | | |
| 3.9 | 31 Jul 2020 | | | | |
| | | Effective Date | Changes | | |
| | | 9 Aug 2020 | 1. Update Tier 2 Code 26850 | | |
| | | | | | |
| 3.10 | 22 Feb 2021 | | ~ | | |
| | | Effective Date | Changes | | |
| | | Immediate | Remove obsolete xsd element UPDATEATTCHMENT (Appendix A) Add back the detail of Triple-DES (Appendix C) | | |
| | | 1 Mar 2021 | 1. Add Tier 2 Codes 76100, 76200, 76300, 76400, 76500, 76600, 76700 (Appendix F) | | |
| 3.11 | 10 Jun 2021 | | | | |
| | | Effective Date | Changes | | |
| | | Immediate | Update from SDNet/2 to SDNet/3 Update the ASCII double quote character in XML examples | | |
| | | 11 July 2021 | 1. Add Tier 2 Codes 13251, 18110, 73030 | | |
| 2.11 | 04.7 0001 | | | | |
| 3.11a | 24 Jun 2021 | Effective Data Charges | | | |
| | | Effective Date 11 July 2021 | Changes 1. Update the English and Chinese names for the | | |
| | | 11 July 2021 | headline category of Tier 2 Code 73030 | | |
| 2.10 | 24 Sec 2021 | | | | |
| 3.12 | 24 Sep 2021 | Effective Date 4 Oct 2021 | Changes 1. Add Tier 1 Codes 56000, 57000, 58000, 59000 (Appendix F) | | |
| | | | (| | |

| Version | Date | Description and reason for modification | | | |
|---------|-------------|---|--|--|--|
| 3.13 | 23 Nov 2021 | Effective Date Immediate | Changes 1. Update Section 2.6, 3.5 and 5 to clarify client connection monitoring, and the arrangement for client to request lost data | | |
| 3.14 | 4 Jan 2022 | | | | |
| | | Effective Date 17 January 2022 | Changes 1. Update the Chinese name for the headline category of Tier 2 Code 26550 | | |
| 3.15 | 7 Jan 2022 | | | | |
| | | Effective Date 31 January 2022 | Changes 1. Add Tier 2 Codes 72661, 72731, 72741, 72811, 73700 (Appendix F) | | |
| 3.16 | 27 Jun 2022 | | | | |
| | | Effective Date Immediate Q4 2022 | Changes 1. Housekeeping the headlines in Appendix F 1. Introduction of news subtypes, "UPDATED" and "DELETED" - Section 4.2.1 - Section 5.2.1 - Appendix A, H | | |
| 3.17 | 4 Jul 2022 | Effective Date | Changes | | |
| | | 5 Aug 2022 | Add Tier 2 Code 91300 (Appendix F) Updates the English and Chinese names for Tier 1 Code 53000, 91000 | | |
| 3.18 | 30 Sep 2022 | Effective Date | Changes | | |
| | | Immediate | Updated examples for cases of hold up news and recovery news. | | |
| 3.19 | 7 Dec 2022 | Effective Date Immediate | Changes 1. Housekeeping of information -Section 1.1, 2.4.1, 2.4.4, 2.6, 3.5, 3.6, 4.1.1, 4.1.6, Appendix A & C – Removed the wording "HKEX-IS" and added Application Service Providers -Section 3.7 – Supplemented failover behavior for news resend | | |
| | | 1 Jan 2023 | Updated the English and Chinese names for Tier 2 Code 18520, 26850 | | |

1. Introduction

1.1. Overview

Issuer Information feed Service (IIS) is a system which distributes issuer information that includes Listed Company news, Exchange news of Stock Exchange of Hong Kong Limited ("the Exchange") and issuer documents. This document provides message definition and application protocol between IIS and IIS subscribers /distributors/ information vendors/ Application Service Providers (hereunder collectively abbreviated as "Vendors"). It also describes the error handling and recovery procedure.

The intended reader of this document is the technical personnel of a company that has subscribed for this information service. The technical personnel should acquire basic knowledge of cryptographic technology and XML (Extensible Markup Language). This specification provides sufficient information for Vendors to develop their own systems to receive issuer information from IIS.

1.2 Document Structure

| Section 2 | System Overview |
|-----------|---|
| | This section describes the scope, constraints and application protocol of IIS. |
| Section 3 | Line Protocol |
| | This section describes the communication means between IIS and system of the |
| | Vendor |
| Section 4 | Detailed Message Format |
| | This section describes the message format in details |
| Section 5 | Detailed Message Processing and Application Protocol |
| | This section describes the message processing and application protocol in details |
| Appendix | This section contains several subsections for detailed implementation. It includes: |
| | XML schema |
| | Base64 encoding and decoding algorithms |
| | Cryptography in IIS |
| | An example of Message Flow Diagram |
| | Error Code Definition |
| | Subject Code within Descriptive Metadata |
| | MIME Type – File Extension Mapping |

1.3 Document Convention

[data format] variable to be substituted which compiles with data format

| data format includes : | X – character 9 – [0-9] numeric value N – [0-9] character included leading zeros. * zero or more | |
|------------------------|---|--|
| | + one or more | |

For example:

[X]* refer to a string including empty string: "123", "test"

[X]+ refer to a string with at least 1 character.

[9]*3 refer to a numeric value 0-999

[N]*5 refer to a numeric string 0000 - 99999

2. System Overview

2.1 Scope

IIS provides issuer information which includes real time news and issuer document to Vendors and this covers the following categories.

- 1. Exchange news
- 2. Listed Company news
 - Main
 - ➢ GEM
- 3. Issuer documents

All the news and issuer document collected for distribution in IIS are generally named as news in the subsequent sections of this document.

2.2. IIS Operation Hours

IIS operates during Securities Market trading days from Monday to Friday and day immediately before the first trading day of any given calendar week. Specifically, IIS operation hours are as follows:

2.2.1 Trading Days

a) System Hours:

- Ready for Logon at 05:30
- System Shut Down at 00:00 (next day)

IIS would provide one day online news headline and 2 business days' online news attachments to Vendors. After IIS System is restarted in the morning, only current day's news and news attachments for current day and the business day before will be available (i.e. from 0:00 onwards)

- b) Business Hours (with news / document distribution):
 - Mon Fri 06:00 23:00
- 2.2.2 Day (including mid-week public holiday) immediately before the first trading day of any given calendar week
- a) System Hours:
 - Ready for Logon at 17:30
 - System Shut Down at 21:00

IIS would provide one day online news headline and 2 business days' online news attachments to Vendors. After IIS System is restarted in the morning, only current day's news and news attachments for current day and the business day before will be available (i.e. from 0:00 onwards)

b) Business Hours (with news / document distribution):

18:00 - 20:00

All non-IIS operation hours, i.e. any time outside a) and b) in 2.2.1 & 2.2.2 above, will be reserved for maintenance.

c) Testing Hours (with news / document distribution):

Testing data will be disseminated on demand during weekends. Vendors should ignore testing data from SAT 06:00- SUN 12:00 regularly. An Illustration for April 2006:

| Sun | Mon | Tue | Wed | Thu | Fri | Sat |
|-----|------------------|-----|-----------------------|-----|----------------|-----|
| | | | | | | 1 |
| 2 | 3 | 4 | Ching Ming Festival 5 | 6 | 7 | 8 |
| В | Α | A | В | A | A | |
| 9 | 10 | 11 | 12 | 13 | Good Friday 14 | 15 |
| В | Α | A | Α | A | | |
| 16 | Easter Monday 17 | 18 | 19 | 20 | 21 | 22 |
| | В | A | Α | A | A | |
| 23 | 24 | 25 | 26 | 27 | 28 | 29 |
| В | Α | Α | Α | Α | A | |
| 30 | Labour Day 1 | 2 | | | | |
| | В | A | | | | |

Note:

Saturdays, Sundays and holidays are shaded in grey.

IIS will be brought up on Days marked with "A" and "B" which represents:

A days – follow the schedule stated in section 2.2.1, being Trading days

B days – follow the schedule stated in section 2.2.2, being Day (including mid-week public holiday) immediately before the first trading day of any given calendar week.

2.3 Information Delivery

News is composed of two parts, headline and attachment. Once the Vendor has logon to IIS, updated and subscribed headline is delivered to the Vendor automatically. If the subscription includes attachment, the attachment can be retrieved by the Vendor upon request through FTP protocol (RFC 959, http://www.ietf.org/rfc/rfc0959.txt)..

Each headline contains unique headline identity, news information, e.g. category, date/time in ISO 8601 format, language in ISO language code (ISO639-ISO3166); with/without information of each associated attachment, e.g. unique attachment identity "Href", size in bytes, hash value using Message Digest 5 algorithm (RFC 1321 of IETF). The Vendor can then retrieve the attachment from IIS File Transfer Server and the integrity of the attachment can be verified using Message Digest 5 algorithm against the hash value coming with the headline.

The headline is in XML format while they are devised with reference to NewsML Version 1.0 of International Press Telecommunication Council. The functional specification of NewsML Version 1.0 was updated on 24th October 2001. It is available in public Internet, <u>http://www.iptc.org</u>. The specification can be found with this URL <u>https://www.iptc.org/std/NewsML/1.0/</u>

Additional XML tags are defined to enclose headline, control flow, command and status response instructions and the final XML form is called message block. These message blocks are transferred over TCP/IP session that has been established between IIS and Vendor's terminal.

More detailed descriptions on the messaging interface are given in the following sections.

The message block is classified into three types, command/response, data and control flow. It takes the following form.

```
<?xml version="1.0"?>
<NDSML>
<MsgHeader>
<MsgDate>......</MsgDate>
<MsgID>.....</MsgID>
<MsgType>.....</MsgType>
</MsgHeader>
```

<[MsgID]> </[MsgID]>

</NDSML>

| Tag | Format | M/O | Occurs | Description |
|-----------|---------------------------|-----|--------|----------------------------|
| NDSML | Complex | М | 1 | IIS Message root tag |
| | | | | |
| MsgHeader | Complex | М | 1 | Message header information |
| MsgDate | CCYYMMDDT24HHMISS[+-]NNNN | М | 1 | Message delivery date time |
| MsgID | [X]*20 | М | 1 | Message code/Command |
| MsgType | [NDScmd/NDSdata/NDSctrl] | М | 1 | Message Category code |
| | | | | |
| [MsgID] | [X]* | М | 1 | Message ID |

The following table summarises the types of message used in IIS.

| Message category | Message type | Message_code |
|------------------|--------------|----------------|
| Command/response | NDScmd | INITREQ |
| | | INITRESP |
| | | LOGONREQ |
| | | LOGONRESP |
| | | LOGOFF |
| | | CHNGPWDREQ |
| | | CHNGPWDRESP |
| | | FULLRECVYREQ |
| | | PARTRECVYREQ |
| | | RECVYRESP |
| | | RECVYCOMPLETE |
| | | PERMISSIONDROP |
| Data | NDSdata | UPDATEHEADLINE |
| | | RECVYHEADLINE |
| Control flow | NDSctrl | STATUSREQ |
| | | STATUSRESP |

2.4 Application Protocol

The Application protocol covers the following areas.

- Logon and Logoff
- Normal transmission
- Error recovery
- Message handshake

The first three items fall into command/response and data categories while the last one belongs to control flow category.

The following provides an overview to the protocol used in the application. Please refer to the detailed message processing and application protocol section for a detailed description of each kind of application messages.

2.4.1 Logon and Logoff

Having established the TCP/IP connection with IIS, the Vendor sends INITREQ command to IIS. IIS responds with INITRESP response together with logon information and session key encrypted by IIS symmetric key using Triple-DES algorithm (see Appendix C for details). The Vendor makes LOGONREQ command with Vendor identity and password encrypted by the session key using Triple-DES algorithm. Having verified the Vendor information, IIS gives back LOGONRESP response together with logon response information. It should be noted that each Vendor identity can only be used for one connection with IIS while duplicate logon is guarded in IIS. Once duplicate logon from same Vendor (Determined by

connection using same Vendor identity) is detected by IIS, all connections using the same Vendor identity will be dropped. If the Vendor fails to logon to IIS for 9 times (subject to be changed), its account is deactivated. The Vendor must contact us or its dedicated agent in order to access the service again.

When the Vendor would like to stop receiving updated news, the Vendor can issue a LOGOFF command to inform IIS. However, if the Vendor would like to receive updated news again, the Vendor must issue INITREQ and then LOGONREQ commands again. If the Vendor system is closed without sending LOGOFF command, IIS will discover the disconnection based on the message handshake protocol or TCP/IP layer whichever comes first.

2.4.2 Normal Transmission

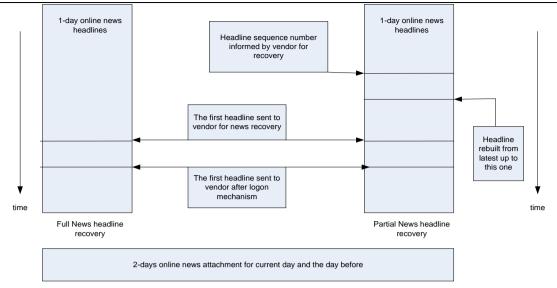

After the Vendor terminal has gone through logon process, subscribed headline just received from IIS is delivered to it using unsolicited data response UPDATEHEADLINE while this headline does not contain attachment information. If the subscription includes an attachment, the Vendor receives another headline with attachment information. Each headline sent from IIS no matter which subtype it belongs to (to be described in later section) is assigned a sequence number and this sequence number "Headline Sequence Number" is used for partial headline recovery. However, this sequence number may not be in consecutive sequence depending on what kinds of news the Vendor has subscribed.

For each attachment, the Vendor sends retrieval request with unique attachment identity to assigned IIS File Transfer Server(s) through FTP protocol. Having acquired the attachment, the Vendor terminal can calculate the hash value of the attachment using Message Digest 5 algorithm. This calculated hash value should be verified against the one coming with the associated headline. If for some reasons the Vendor terminal gets a corrupted/incomplete attachment, the Vendor should repeat the attachment retrieval process again.

Vendors are recommended to confine the number of concurrent FTP retrieval sessions to be no more than 10 at the same time. Excessive concurrent FTP retrievals will slow down he overall performance and prolong the retrieval time for smaller attachments.

2.4.3 Error Recovery

The Vendor can initiate a recovery request to recover up to 1 day's online news headlines and 2 business days' online news attachments from IIS. IIS can rebuild the headline and allow Vendor to retrieve the associated attachment from dedicated IIS File Transfer Server through FTP protocol. Two levels of recovery are provided for the Vendor. Firstly, a recovery of 1 day's online headline request can be made whilst 2 business days' online news attachments can be recovered by repeating the attachment retrieval process from IIS File Transfer Server. The recovered headline is sent to the Vendor terminal in a last-in-first-out order. Secondly, partial online headline recovery can be requested. The Vendor needs to inform IIS the last news it kept within its own system (identified by the sequence number of headline) and IIS will rebuild the successive headlines also in last-in-first-out order. It should be noted that the most recent news received from IIS is also sent to the Vendor at the same time. The following diagram depicts the news recovery mechanism.

For full recovery, the Vendor should send FULLRECVYREQ command to IIS. IIS will accept FULLRECVYREQ only right after the logon request completed successfully. IIS will ignore any FULLRECVYREQ once news has been dissemination after Vendor logon. This feature is designed to avoid unnecessary full recovery requests made by vendors which may affect their system performance. For partial recovery, the Vendor should send PARTRECVYREQ command with last "Headline Sequence Number" to IIS. In both cases, IIS will respond with RECVYRESP with the total number of recovery headlines to be sent to the Vendor. Then, IIS will rebuild the recovery headline for the Vendor using unsolicited data response RECVYHEADLINE. After all recovered headlines are sent, IIS sends status response RECVYCOMPLETE to the Vendor.

Due to the long lead time required for full news recovery during the operation hours, direct connection IIS vendors can only request one full news recovery through a single connection session. A re-connection is required for additional full news recovery. Vendors are advised to perform full news recovery on one of the dual live connections, but not both at the same time.

2.4.4 Message Handshake

Status request feature is available to improve the communication fault detection time. Thus, when no traffic is detected from the Vendor terminal for 120 seconds (subject to be changed), IIS sends STATUSREQ command to the Vendor terminal and expects Vendor to respond with STATUSRESP. If the Vendor terminal does not respond to the status request for 120 seconds, IIS would issue STATUSREQ command again. If IIS does not get any response, it would disconnect the established connection with that Vendor terminal. Vendor can also issue this status request to detect if IIS is still running when there is no traffic from IIS for 60 seconds.

2.5 IIS Certification Test

Vendors who choose direct connection with IIS system have to pass the IIS Certification Test according to the requirements as set out in the IIS Certification Test Procedures (This document will be provided by Exchange upon IIS service application) before they will be granted the IIS license. The IIS Certification Test will cover all requirements set out in this document. Apart from the IIS Certification Test, direct connection IIS vendors must meet all the requirements as set out in the IIS Transmission Specification.

2.6 Technical Requirements for Direct Connection Vendors

- 1. Direct connection vendors must meet all the requirements as set out in this IIS Transmission Specification.
- 2. The system of the direct connection vendors must have sufficient capacity to process the Exchange's news data with minimum latency. To achieve minimum latency, vendors are advised to set the TCP Receive Buffer Size to 64K bytes and to allocate dedicated server for interfacing with the IIS host system.)
- 3. Direct connection vendors must ensure that lines connecting to IIS system meet the minimum bandwidth required. (The minimum bandwidth requirement is at present 2 Mbps.)
- 4. Direct connection vendors must have dual live connections with IIS.
- 5. Direct connection vendors are required to have their own monitoring on their system and connectivity, and able to alert when they cannot operate normally during the IIS operating window.
- 6. Direct connection vendors must be able to detect line failure automatically and reconnect within 5 minutes. Such requirement will be included in the IIS Certification Test for new direct connection IIS vendors and will be tested once a year in the market rehearsals. The results of the market rehearsals will be published on the HKEX website for public reference.
- 7. Due to the long lead time required for full news recovery during the operation hours, direct connection IIS vendors can only request one full news recovery through a single connection session. A reconnection is required for additional full news recovery. Vendors are advised to perform full news recovery on one of the dual live connections, but not both at the same time.
- 8. Direct connection vendors have to pass the Certification Test according to the requirements as set out in the IIS Certification Test Procedures before they are approved to redistribute IIS news.

3. Line Protocol

| Item | Description |
|--------------------------|---|
| Mode of transmission | IP-based Network |
| Communication line speed | 2Mbps, 3 Mbps and 4Mbps available* |
| Communication protocol | TCP/IP (port number 20, 21 for file transfer & 6800 for IIS |
| | headline and command messages) |
| Allocated Bandwidth | 128Kbps for IIS headline and command messages Available bandwidth for Attachments depends on the bandwidth of the line subscribed by the Vendor for file retrieval |
| TCP Receive Buffer Size | 64K Bytes* |

* The system of the direct connection IIS vendors must have sufficient capacity to process the Exchange's news data with minimum latency. To achieve minimum latency, vendors are advised to acquire a minimum 2Mbps line bandwidth and 64K Bytes TCP Receive Buffer Size to all dedicated servers for interfacing with the IIS host system.

3.1 Number of Connections and Connection Requirement

It is a requirement that Vendors should have two connections or links configured on their systems. Vendors should at all times ensure that all links are ready. The standard configuration contains dual live connections. Both links to IIS production system could receive live data transmission. However, IIS will operate the two links separately as if they were two primary links connected to two independent systems.

3.2 IIS Connection Ports in the Primary Site

An IIS Connection Port in Primary Site contains one set of IIS server IP addresses:

- an IP address of IIS Data Delivery Server for headlines and command messages

an IP address of IIS File Transfer Server for attachment file retrieval through FTP

For each Vendor identity, it is given two sets of IP addresses representing one primary and one secondary connection ports on the IIS Primary production system ("the Connection Ports"). If Vendor found that no TCP/IP connection can be established after 3 times of retry on each IP address, it should stop its system and find out if there is any problem with the physical connections.

Under the standard configuration of dual live connections (with two live feeds), IIS will provide two production Connection Ports and allow each Vendor to maintain two logon sessions using two different Vendor identities.

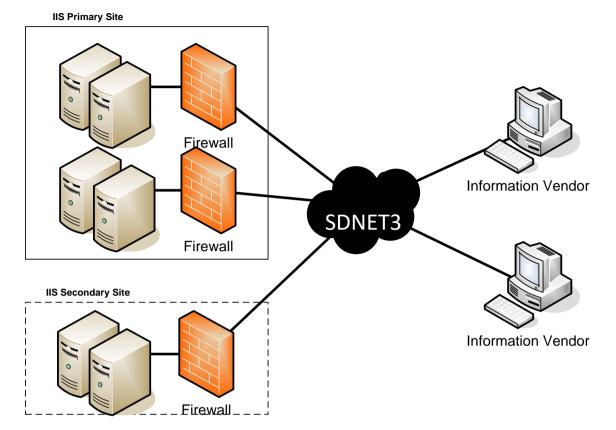

3.3 IIS Disaster Recovery Port in the Secondary Site

In order to increase the availability of IIS, a Secondary Site for IIS is introduced. Each Vendor will be provided with a single Disaster Recovery Port though there are dual live connections in the Primary Site. A Disaster Recovery Port contains one set of IIS server IP addresses:

- an IP address of IIS Data Delivery Server for headlines and command messages
- an IP address of IIS File Transfer Server for attachment file retrieval through FTP protocol

When site failover is triggered, Vendor will just need to switch their connections from the Primary Connection Ports to the Disaster Recovery Port. Instead of using the connection ports for the Primary production system, Vendor had to use the Disaster Recovery Port in the Secondary Site. An additional Disaster Recovery Port could be arranged but is subject to additional charges.

3.4. Network Diagram

Network Diagram for Dual Live Connections Configuration

3.5 Line Connection Failure

The connection ports of the Primary production system are expected to be used for normal transmission. If there is a failure on either connection, the vendor can attempt to reconnect to IIS using the same connection port on the Primary system.

Vendors are required to have their own monitoring to detect their system and IIS connection failure so that any abnormalities can be promptly identified and remedied, e.g. unsuccessful login, disconnection, system fails to startup, etc.

Vendors are requested to implement auto-detection of line failure and auto-reconnection of its production line. This would help to shorten blackout time and ensure continuity of news transmission.

Under the situation when Vendor's system or connectivity encounters failure at their side and could not recover the news from IIS at their own, if Vendor needs the support from us to recover the lost messages, they should on the same day send a request to us. The news files would be provided to the Vendor to facilitate their data recovery. Please note, if the requested recovered news is long-dated, it may take a long time on data retrieval.

3.6 Failure of the IIS System in Primary Site

If IIS system in Primary Site fails, IIS site failover will be triggered. The operation will take approximately 30 minutes to fail IIS over to the Secondary Site and ready for news dissemination. After failover to Secondary Site, IIS would be in a state which is ready to perform full news recovery. Upon receiving

notification from us, Vendor will be required to connect to IIS Secondary Site via the Disaster Recovery Port.

Right after switching from the Primary site to the Secondary Site, Vendors should perform a full recovery to make sure their system will not miss any news that may be published during the failover period.

3.7 Guidance for Vendor during IIS Failover

Pre-requisites for failover to the Secondary Site:

- Disaster Recovery Port in the Secondary Site is ready;
- User ID and password is ready (Any new password change on the failover day will be lost and old password is expected to be used after failover to the Secondary Site);
- Vendors should perform their housekeeping wherever applicable. i.e. to record the headlines or attachments which have yet been completely received before failover.

Steps for reconnecting to the Secondary Site of IIS:

- Attempt the Disaster Recovery Port in Secondary Site;
- Issue logon request and complete the logon process as usual;
- Issue full recovery request;
- Start receiving full set of news headlines (reverse chronological order with latest news transmitted first) for current day. Vendor should note that the following special handling is required:
 - \circ The sequence number for news after site failover will start from 1. It also applies to failover from the Secondary to Primary Site as well;
 - In addition to news headlines received via full recovery request, it is possible for the news headlines, which has already been disseminated in Primary Site before IIS failover, to be disseminated again in Secondary Site. Therefore, Vendor's software should check if there is duplication of news headlines received. It can be done by checking the Headline <ProviderID>, <DateID> and <NewsItemId> (refer to section 5.2.1 for details). The Vendor's software should avoid sending attachment retrieval request for any news that was already retrieved completely before, otherwise it will introduce unnecessary loading on the IIS File Transfer server.

3.8 Contingency Arrangement

If IIS fails in the Primary Site and the Secondary Site cannot be brought up for service continuity, vendors will be informed by email of the service disruption.

If IIS can be resumed before mid-night of failure day, vendors will be advised to connect to IIS for service recovery.

If IIS cannot be resumed before mid-night of failure day, the contingency arrangement will be triggered. A download link of a file with all issuer documents stated at section Main Broad and GEM Broad Headline Category of appendix F released on the HKEXnews website on the failure day, together with a CSV mapping file will be provided to IIS Vendors in the morning of the following business day. Please refer to the Guideline on reading the IIS files provided under Contingency Arrangement as described in Appendix H.

The resumption of normal services will be communicated by e-mail to Executive, Technical and Emergency Contacts of IIS Vendors.

4. Detailed Message Processing and Application Protocol

There are three kinds of message category, command/response, data and control flow. The command instructions are sent from the Vendor to request services of IIS, such as request for connection and data recovery. Data message category is focused on data contents delivery, i.e. headline and attachment. Headline is delivered in an unsolicited way whereas attachment is sent on request. The third type, control flow, is an interactive way of communication. IIS can detect if the Vendor system is up and running and vice versa.

4.1 Command/Response Messages

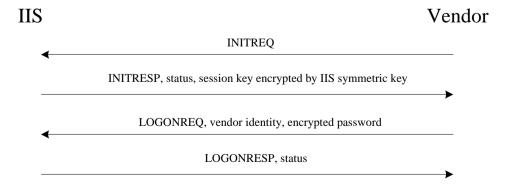

These messages are used for connection request and data recovery. The "MsgID" is among one of the following values.

| Message code | Message originator | Description |
|----------------|--------------------|---|
| INITREQ | Vendor | Request to communicate with IIS |
| INITRESP | IIS | Asking the Vendor to send Vendor identity and |
| | | encrypted password |
| LOGONREQ | Vendor | Sending Vendor identity and encrypted |
| | | password for authentication |
| LOGONRESP | IIS | Responding if the service is granted or denied to |
| | | the Vendor |
| LOGOFF | Vendor | Disconnecting from the existing service |
| CHNGPWDREQ | Vendor | Request to change the password |
| CHNGPWDRESP | IIS | Responding if the change of password |
| | | instruction is successful |
| FULLRECVYREQ | Vendor | Full headline recovery |
| PARTRECVYREQ | Vendor | Partial headline recovery |
| RECVYRESP | IIS | Headline recovery response |
| RECVYCOMPLETE | IIS | Notification of the completion of headline |
| | | recovery |
| PERMISSIONDROP | IIS | It is a notification to Vendor that the Vendor |
| | | identity cannot be used to get service from IIS |

For the Request/Response messages, there is one "ReqID" attribute at both request/response "MsgID" tag to associate the response message to the request message. Vendor should issue the request command with a unique "ReqID" assigned that IIS will respond with the same "ReqID". This can be achieved by an incremental sequence number.

4.1.1 Logon

There are two steps during logon process as shown after the Vendor establishes TCP/IP connection with IIS. If the connection cannot be established with the primary address, the secondary address should be tried.

Firstly, the Vendor initiates INITREQ request to IIS. IIS responds with INITRESP response message to the Vendor. The following response status is found.

| Response status | Additional information/Error Code | Description |
|-----------------|---|--------------------------------|
| SUCCESS | Session key encrypted by IIS symmetric | Successful status with session |
| | key using Triple-DES algorithm which is | key for password encryption in |
| | described in Appendix C | next step |
| FAILURE | INVALID_MESG | Invalid Message Format |
| FAILURE | SERVICE_NOT_AVAILABLE | Service not available |

The session key is used to protect sensitive information, e.g. password, transferred between IIS and Vendor. This key in big-endian format is encrypted by IIS symmetric key using Triple-DES algorithm and then it is transformed to Base64 format. For details, please refer to Appendix C. The IIS symmetric key is distributed to each Vendor. The session key is invalidated after either the Vendor issues LOGOFF command or either one of parties is disconnected.

Secondly, the Vendor sends LOGONREQ request with Vendor identity and encrypted password with session key using Triple-DES algorithm to IIS (please see Appendix C for details). The encrypted password should be transformed to Base64 format before transmission. IIS will respond with LOGONRESP and logon status to indicate whether the service is granted or denied. After successful logon, the Vendor can request other services such as change of password and headline recovery while updated and subscribed headline is delivered to the Vendor automatically. Thus, if the Vendor requests these types of service before the logon process, IIS will respond with failure status code. The following response status for LOGONRESP can be found.

| Response status | Additional information/ Error Code | Description |
|-----------------|------------------------------------|-----------------------------------|
| SUCCESS | Kind of services | Successful status indicating what |
| | (HDL or HDL AND ATT) | kind of services is granted |
| | Subscribed package | (headline or headline and |
| | (A or B or C) | attachment) |
| FAILURE | INVALID_MESSAGE | Invalid message format |
| FAILURE | INCORRECT_SUBSCRIBER | Incorrect Vendor identity or |
| | | password |
| FAILURE | PERMISSION_DROP | Operation not allowed because |
| | | permission is dropped |
| FAILURE | DUPLICATE_LOGON | A connection has been |
| | | established for same Vendor |
| | | identity and password. All |
| | | connections from the same |
| | | Vendor Identity will be dropped. |
| FAILURE | SERVICE_NOT_AVAILABLE | Service not available |

If the Vendor fails to log on to IIS for 9 times, the account is de-activated. "PERMISSION_DROP" status response message is returned on 9th time of failure. The Vendor must contact us or its dedicated agent in order to access the service again.

If response message of "FAILURE" with "DUPLICATE_LOGON" error code is received, the Vendor should initiate connections to IIS again.

The Vendor can choose to initiate a full or partial recovery request after successful logon to IIS in order to ensure there is no outstanding headline pending received. For partial headline recovery, the IIS may respond RECVYRESP with Error code = NEWS_NOT_FOUND. Under this situation, there are no outstanding headlines in IIS and the vendor need to send FULLRECVYREQ command back to IIS for retrieving current day's outstanding headline.

4.1.2 Logoff

When the Vendor does not want to receive updated headline and to get any kind of service from IIS, the Vendor terminal can issue LOGOFF request to inform IIS about this. However, IIS would still issue

STATUSREQ command to find out if the Vendor terminal is running. If the Vendor does not respond this command twice, IIS will drop the connection. When the Vendor would like to communicate with IIS, the Vendor must issue INITREQ and then LOGONREQ commands again. When TCP/IP connection is still maintained, another Vendor using same pair of Vendor identity and password is not allowed if the Vendor does not issue LOGOFF command. "Duplicated logon" is resulted for that new connection.

Any invalid message format for LOGOFF command will be discarded in IIS. As a result, updated headline is still sent to the Vendor. If the Vendor does not issue LOGOFF command for service disconnection before dropping the TCP/IP connection, IIS will discover the disconnection via the STATUSREQ. It might take about two minutes for IIS to find out if the connection is actually gone, however, this elapse time is only indicative and may vary accordingly depending on different Vendor's setup.

Once IIS acknowledges the successful status of LOGOFF command, the session key created during logon process is invalidated. The Vendor must issue INITREQ again to establish new session.

4.1.3 Change of Password

The Vendors are recommended to change their password at an interval of 3 months although the system would not guard against this. To change the password, Vendors can issue CHNGPWDREQ command through their system with existing password and new password. Both existing and new passwords are encrypted by session key obtained during logon process using Triple-DES algorithm (please see Appendix C for details). As before, the encrypted password should be transformed to Base64 format. After verifying the correctness of the existing password, IIS responds with CHNGPWDRESP to indicate if the changes are effective in IIS. The following response status can be found.

| Response status | Additional information / Error Code | Description |
|-----------------|-------------------------------------|--|
| SUCCESS | | Successful status |
| FAILURE | INVALID_MESSAGE | Invalid message format |
| FAILURE | INCORRECT_SUBSCRIBER | Incorrect Vendor identity or |
| | | password |
| FAILURE | INVALID_PASSWORD | Password is malformed (i.e. invalid |
| | | character exists or length of password |
| | | < 16) OR |
| | | historical password is used. |
| | | |
| | | Refer to section 6 Security and |
| | | Control for detail password |
| | | requirement. |
| FAILURE | PERMISSION_DROP | Operation not allowed because |
| | | permission is dropped |
| FAILURE | SESSION_NOT_ESTABLISHED | Cannot perform this function since |
| | | session is not established |
| FAILURE | SERVICE_NOT_AVAILABLE | Service not available |

A session must be established before this command can be issued.

4.1.4 Headline Recovery

The Vendor can request two kinds of headline recovery, full and partial, after logging onto IIS. Full headline recovery command FULLRECVYREQ is to rebuild a total of 1-day's headline. Partial headline recovery command PARTRECVYREQ with "Headline sequence number" is to rebuild all those headlines subsequent to this sequence number. IIS would respond with RECVYRESP with number of recovery headline to be sent to the Vendor.

During headline recovery, headlines are sent in a reverse chronological order. Attachment for such headlines is requested on demand from the Vendor. It should be noted that the most recent headline is also sent simultaneously to the Vendor during headline recovery. After all pieces of the recovery headline are sent, IIS sends an unsolicited message RECVYCOMPLETE to inform the Vendor the completion of the headline recovery.

The following is the request commands for headline recovery.

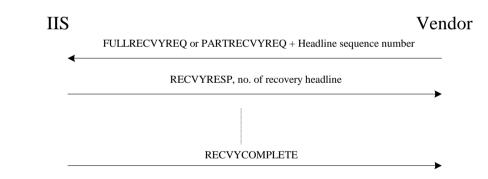

| Request command | Additional information | Description |
|------------------------|--------------------------|---|
| FULLRECVYREQ | | Request 1-day online headline recovery |
| PARTRECVYREQ | Headline sequence number | Request recovery headlines which come after |
| | | the one specified by headline sequence number |

The following response status RECVYRESP can be found.

| Response status | Additional information/ Error code | Description |
|-----------------|------------------------------------|--|
| SUCCESS | Number of recovery headline | Successful status |
| FAILURE | INVALID_MESSAGE | Invalid message format |
| FAILURE | PERMISSION_DROP | Operation not allowed because |
| | | permission is dropped |
| FAILURE | SESSION_NOT_ESTABLISHED | Cannot perform this function since |
| | | session is not established |
| FAILURE | NEWS_NOT_FOUND | Supplied Headline Sequence Number |
| | | cannot be located in IIS. |
| FAILURE | SYSTEM_BUSY | The new request cannot be fulfilled |
| | | because IIS is still processing recovery |
| | | request |
| FAILURE | SERVICE_NOT_AVAILABLE | Service not available |

The following is the unsolicited command to indicate the completion of the recovery headline.

| Unsolicited command | Additional information | Description |
|---------------------|------------------------|--|
| RECVYCOMPLETE | | To inform the Vendor that headline recovery is |
| | | completed |

4.1.5 Permission dropped

In cases where service to a Vendor has been suspended, the Vendor will receive PERMISSIONDROP unsolicited command message.

| Unsolicited command | Additional information | Description |
|----------------------------|-------------------------------|--|
| PERMISSIONDROP | | To inform the Vendor that its identity cannot be |
| | | used to access IIS service |

Afterwards, the system will automatically disconnect the existing session.

4.1.6 Exceptional Handling

"SERVICE_NOT_AVAILABLE" status reveals that some of the components in IIS cannot be communicated. Thus, there may not be updated headline and logon mechanism may not be able to be accomplished. The Vendor should drop TCP/IP connection and try to connect to IIS for every 15 minutes.

On processing headline recovery request, IIS ignores new headline recovery request command with same unique request identity "ReqID". If the request identity is different, IIS responds with "SYSTEM_BUSY" status.

On the other hand, if there is no response from IIS within 30 seconds after a command has been sent, the Vendor should re-send the command with same unique request identity again. If no response is received, it is recommended to drop TCP/IP connection and then establish the TCP/IP connection again. Vendor should reconnect to IIS system once disconnection detected and keep the service outage within 5 minutes. Vendor is recommended to perform full recovery after reconnection in order to recover the lost IIS news and minimize the latency of receiving IIS news. Please make sure that the network connectivity between IIS and Vendor is fine and TCP/IP connection is established.

Annual drill for line failure reconnection will be arranged and the test result will be published on HKEX website for public reference.

4.2 Data messages

There are only one type of data message - headline.

4.2.1 Headline

Vendor will receive a UPDATEHEADLINE message for the most recent headline and a RECVYHEADLINE message for the recovery headline. Both messages can contain Unique Headline Identity, date/time, subtype, product categories, language, headline content, encoding format of the headline content, number of attachment and description of attachment. For UPDATEHEADLINE, a sequence number is assigned by IIS and this sequence number "Headline Sequence Number" is used for partial headline recovery.

There is a "Type" attribute defined in the UPDATEHEADLINE tag: [ALERT]/[FIRSTTAKE]/[SUBTAKE]/[CANCELLED]/[AMENDED]/[UPDATED]/[DELETED]. More detailed explanation is found in next section.

The [FIRSTTAKE] headline contains News Identity, date/time, subtype, product categories, language and headline content while this type of headline is delivered to both headline and headline with attachment Vendors who subscribe those product categories. The [SUBTAKE] headline contains News Identity, date/time, subtype, product categories, language, headline content and attachment information while this type of headline is delivered to headline with attachment Vendors only. For news with multiple attachments, the subject name (a brief description of file content) for each individual attachment will also be included as part of the attachment information.

4.3 Control flow message

Control flow message is used to ensure that the communication between IIS and the Vendor is working properly. There is one message type – status enquiry.

4.3.1 Status enquiry

In general, IIS would issue STATUSREQ command to the Vendor if there is no traffic in both directions between IIS and Vendor for 120 seconds. Then the Vendor should respond with STATUSRESP status. If IIS does not receive this status response for another 120 seconds, it would issue the command again. After 120 seconds from the second STATUSREQ command, IIS disconnects the session by dropping the TCP/IP connection. Conversely, the Vendor can also issue STATUSREQ command to find out if IIS is working or not. The same format of STATUSRESP status response should be received. It is recommended for the Vendor to issue this command only when it does not receive any message from IIS for 60 seconds.

4.4 General exception

When the Vendor receives message that cannot be recognized as one of the above message codes or the message is an incomplete XML message, it should discard the message. If the Vendor receives 3 consecutive invalid messages, it is recommended to drop the existing TCP/IP connections and connect to IIS again. Similarly, when IIS receives 3 sequential invalid messages, it would drop TCP/IP connection automatically.

4.5 Attachment Retrieval

Having received the headline, the Vendor should have sufficient information to retrieve the associated attachment one by one. The attachment information coming with the headline includes "Unique Attachment identity", attachment type (MIME), size of attachment in bytes and hash value of the attachment using MD5. The Vendor can connect to IIS File Transfer Server and acquire the desired news attachment file through FTP protocol. Once the file transfer process is completed, Vendor can calculate the hash value using MD5 for the attachment file and verify with the hash value come with corresponding news headline. In case of any discrepancy, it would mean that the attachment is corrupted and the Vendor should repeat the attachment retrieval process again.

A new element called URL is added in SUBTAKE to send the location of the news attachment in IIS File Transfer Server. Vendor can connect to the IIS File Transfer Server via FTP protocol and download the attachment using the file path provided in URL.

```
The following illustrated a SUBTAKE message which vendor should receive for this example.
<?xml version="1.0" encoding="UTF-8"?>
<NDSML xmlns="http://www.hkex.com.hk/iis" xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance">
         <MsgHeader>
                   <MsgDate>20061001T120000+0800</MsgDate>
                   <MsgID>UPDATEHEADLINE</MsgID>
                   <MsgType>NDSdata</MsgType>
         </MsgHeader>
         <UPDATEHEADLINE Type="SUBTAKE" SeqNo="2">
                   < NewsML >
                            <NewsItem>
                                     <NewsIdentifier>
                                               <ProviderId>HKEX-EPS</ProviderId>
                                               <DateId>20061001</DateId>
                                               <NewsItemId>0004911</NewsItemId>
                                     </NewsIdentifier>
                                     <DescriptiveMetadata>
                                               <Language FormalName="zh-hk"/>
                                               <SubjectCode>
                                                        <SubjectMatter FormalName="08001" Scheme="Stock Code"/>

```

```
</NDSML>
```

For news with multiple file attachment, vendor need to rename the file downloaded from FTP server according to elements in our SUBTAKE message based on the following format.

<ProviderId> + "_" + <DateId> + "_" + <NewsItemId> + "_" + <ContentItem Href> + "." + FILE EXTENSION in <Url>

Example

SUBTAKE Message <ProviderId>HKEX-EPS</ProviderId> <DateId>20070108</DateId> <NewsItemId>A10086384</NewsItemId> <ContentItem Href="1"> <Url>/20070108/A10086384-1.PDF</Url>

Renamed file name /HKEX-EPS_20070108_A10086384_1.PDF

5. Detailed Message Format

The message format for each message code in details is described in this section. This is an XML type of message including headline and segments of attachment. The XML schema can be found in the Appendix A for reference.

For the news files that would be separately provided under the request from Vendors to recover their lost messages, the files contain the news headline messages which data message format is same as production, but the tag <UPDATEHEADLINE> is replaced by <RECVYHEADLINE>. Also, Vendors could refer to URL in SUBTAKE of headline message to retrieve the related news attachments in IIS File Transfer Server. Please note, only the past business day news attachments is guaranteed to be available. Vendors should arrange the download no later than the end of next day after their incident.

5.1 Command and Response Messages

The format of command status response is shown as follows.

| Tag | Format | M/O | Occurs | Description | Attributes | Format | M/O | Description |
|---------|---------|-----|--------|-----------------|------------|--------|-----|-------------|
| Status | complex | М | 1 | Response status | | | | |
| | | | | command is | | | | |
| Success | N/A | 0 | 1 | succeeded | | | | |
| | | | | command is | | | | |
| Failure | complex | 0 | 1 | failed | | | | |
| ErrCode | [N]*5 | 0 | 1 | Error code | | | | |
| ErrMsg | [X]* | 0 | 1 | Error Message | | | | |

The <Success> tag indicates the command is successfully executed while the <Failure> tag indicates the command is failure to execute with <ErrCode> and <ErrMsg> explaining the reason. Either one of <Success> or <Failure> tags included in a <Status> tag.

5.2 Data Messages

5.2.1 UPDATEHEADLINE and RECVYHEADLINE

These two types of headline share the same format except that the content is enclosed by <UPDATEHEADLINE> and <RECVYHEADLINE> tags for updated and recovery headline respectively.

```
The following is an example of UPDATEHEADLINE.
```

```
<?xml version="1.0" encoding="UTF-8"?>
<NDSML xmlns="http://www.hkex.com.hk/iis">

| |

For recovery headline, the tag <UPDATEHEADLINE> is replaced by <RECVYHEADLINE>.

In either type of headline, there is one field called subtype which is used to identify types of headline. The following table summarizes the types of headline.

| Subtype | Description | |
|-----------|--|--|
| ALERT | Indicating that this is a headline without any attachment | |
| FIRSTTAKE | Indicating that this is the first time IIS has received this headline and it contains headline content and news information | |
| SUBTAKE | Indicating that IIS has received all information including attachment from the source and it contains headline content, news information and attachment information | |
| CANCELLED | Indicating that the headline identified by <newsidentifier> is cancelled in the news source. The news is cancelled by the issuer.</newsidentifier> | |
| AMENDED | Indicating that the headline identified by <newsidentifier> is an amended news in the news source. The news is amended by the issuer.</newsidentifier> | |
| UPDATED | Indicating that the headline identified by <newsidentifier> is updated in the news source. The news is updated by HKEX.</newsidentifier> | |
| DELETED | Indicating that the headline identified by <newsidenfitier> is deleted in the news source. The news is deleted by HKEX and will be removed from HKEX news website</newsidenfitier> | |

As mentioned in previous sections, SUBTAKE is only sent to "Headline with attachment" vendors only while FIRSTTAKE is delivered to both "Headline" vendors and "Headline with attachment" vendors.

For both CANCELLED and DELETED subtype, the vendor will receive a CANCELLED message and DELETED message with the same news identity of the original version of the news respectively. CANCELLED and DELETED message will be sent during recovery.

For DELETED subtype, the DELETED news will also be removed from HKEXnews website and cannot be further AMENDED or UPDATED.

Upon data recovery, the Vendor will receive the latest headlines. In this case, the cancelled headline will be received earlier than the original headline that were cancelled after Vendor has performed data recovery or when IIS has just switched from the Primary Site to Disaster Recovery Site, or vice versa.

Amendment of Headline Category – where only Headline Category in the news was amended. Same as amended news, Vendor will receive a CANCELLED message with the news identity indicating the original version of the news that is being amended. An AMENDED message with a new news identity and new Headline Categories is then sent to Vendor after the CANCELLED message. Vendor can co-relate the amended version of the news and the original version of the amended news by using the news title. News title will remain unchanged even Headline Category (T1 or T2) is changed during the amendment process. Upon data recovery, Vendor will receive the latest headlines first. Hence, Vendor will receive AMENDED message and followed with the CANCELLED message. However, in this case, the original FIRSTTAKE

message with the original version of the amended news is not provided. This will happen after Vendor has performed data recovery or when IIS has just switched from the Primary Site to Disaster Recovery Site, or vice versa.

For illustration, the following examples depict how AMENDED message will work under normal and recovery processes. All messages are listed in order of time sequence when the message is received by Vendor.

| Order | Message Type | Message Property |
|-------|--------------|----------------------------|
| 1 | FIRSTTAKE | News ID=1000 |
| | | Headline Category-T1=10000 |
| | | Headline Category-T2=20000 |
| | | Headline Category-T2=20001 |
| 2 | SUBTAKE | News ID=1000 |
| | | Headline Category-T1=10000 |
| | | Headline Category-T2=20000 |
| | | Headline Category-T2=20001 |
| | | Attachment=File1.doc |
| 3 | CANCELLED | News ID=1000 |
| | | Headline Category-T1=10000 |
| | | Headline Category-T2=20000 |
| | | Headline Category-T2=20001 |
| 4 | AMENDED | News ID=2000 |
| | | Headline Category-T1=40000 |
| | | Headline Category-T2=50000 |
| | | Headline Category-T2=50001 |
| 5 | SUBTAKE | News ID=2000 |
| | | Headline Category-T1=40000 |
| | | Headline Category-T2=50000 |
| | | Headline Category-T2=50001 |
| | | Attachment=File1.doc |

|--|

Amendment of Headline Category (for immediate released news during Recovery Process)

| Order | Message Type | Message Property |
|-------|--------------|----------------------------|
| 1 | AMENDED | News ID=2000 |
| | | Headline Category-T1=40000 |
| | | Headline Category-T2=50000 |
| | | Headline Category-T2=50001 |

| 1 | CANCELLED | News ID=1000 |
| | | Headline Category-T1=10000 |
| | | Headline Category-T2=20000 |
| | | Headline Category-T2=20001 |

For illustration, the following examples depict how UPDATED message will work under normal and recovery processes. All messages are listed in order of time sequence when the message is received by Vendor.

For UPDATED subtype, the Vendor will receive an UPDATED message with the same news identity of the original version of the news. In UPDATED subtype, the expiry date and/or the stock information of the news is changed. When IIS has just switched from Primary Site to Disaster Recovery Site, or vice versa, the original version of the UPDATED news is not provided.

DELETED subtype news (for immediate released news)

DELETED subtype news ((for immediate released deleted news during Recovery Process)

| Order | Message Type | Message Property |
|-------|--------------|------------------|
| 1 | DELETED | News ID=9000003 |

Note:

In addition to CANCELLED, AMENDED, UPDATED and DELETED message for current day news, it is possible for Vendor to receive any CANCELLED, AMENDED, UPDATED and DELETED message for past news.

The unique identity of news is revealed by <ProviderId>, <DateId> and <NewsItemId>. The news information such as document type code (category) and stock code are found within <DescriptiveMetadata> tag. There are four types of subject code within <DescriptiveMetadata> and these include category code (or called Headline Category), market code, stock code, stock name, and expiry date. Category code identifies the category of the information, e.g. company profile or financial report. Market code reveals what markets the information is related to, e.g. GEM board. Multiple numbers of <SubjectMatter> tags can be found in one headline summary. Expiry date identifies the news expiry date*. The news should not be sent out if current date greater than the expiry date. Please refer to appendix F for mapping and example.

*News expiry date: certain announcements will be kept releasing on various channels, e.g. HKEX web, OMD-C repeatedly for a certain period whereas those announcements will only be released once in IIS, but with an expiry date for Vendors to identify and replicate those news for their subscribers before the expiry date, if they wish.

<NewsComponent> is an indicator of the attachment. Thus, number of attachment is explained by <NoofContentItem> tag while each attachment information and contents of headline are given within <NewsComponent> such as date/time, headline content, message digest, type (MIME), e.g. APPLICATION/PDF for PDF file format, and size in bytes of each attachment.

A headline sequence number is assigned to each headline sent from IIS no matter what kinds of SUBTAKE. This sequence number is used for partial headline recovery. Thus, same unique identity of news as mentioned would have different sequence number for different kinds of subtype. The sequence number of recovery headline for same update headline is the same.

6. SECURITY AND CONTROL

IIS does not force the expiry of the vendor password. However, IIS vendors are recommended to change their password at an interval of 3 months for security reasons though the system would not guard against this.

| Vendors' | passwords | should m | neet all the | following i | items as rec | uired by IIS: |
|----------|-----------|----------|--------------|-------------|--------------|---------------|
| | | | | | | |

| Length of password - At least 16 characters - Maximum 20 characters Must contain a combination of: 1. Upper case letter 2. Lower case letter 3. Number 4. Special character as listed below: Character Name ! Exclamation @ At sign # Number sign (hash) \$ Dollar sign ^ Caret & Ampersand * Asterisk (Left parenthesis) Right parenthesis | Item | Requirement | | | | | |
|--|--------------------------|---|--|--|--|--|--|
| Complexity of password - Maximum 20 characters Complexity of password Must contain a combination of: Upper case letter Lower case letter Number Special character as listed below: Character Name Exclamation Must contain a combination of: Upper case letter Number Special character as listed below: Character Name Exclamation Must contain a combination of: Special character as listed below: Complexity of password @ At sign # Number sign (hash) \$ Dollar sign ^ Caret & Ampersand * Asterisk (Left parenthesis) Right parenthesis | Longth of password | - At least 16 characters | | | | | |
| 1. Upper case letter 2. Lower case letter 3. Number 4. Special character as listed below: Complexity of password @ At sign # Number sign (hash) \$ Dollar sign ^ Caret & Ampersand * Asterisk (Left parenthesis) Right parenthesis | Length of password | - Maximum 20 characters | | | | | |
| | Complexity of password | Must contain a combination of: 1. Upper case letter 2. Lower case letter 3. Number 4. Special character as listed below: Character Mame ! Exclamation @ At sign # Number sign (hash) \$ Dollar sign ^ Caret & Ampersand * Asterisk (Left parenthesis | | | | | |
| Hintorgo possword history I Not the same as any of the last 5 passwords | Enforce password history | Not the same as any of the last 5 passwords | | | | | |

HKEX's network has applied different levels of security measures to provide a secure infrastructure for the Issuer Information *feed* Service (IIS) System. All network routers and LAN switches are password protected. The password protection has restricted access to network components.

Packet filtering is applied in all core routers within the network. Filtering rules are configured consistently in all routers throughout the path from Vendors' sites to IIS host system and the network only allows traffic to travel in pre-defined paths. Any attempt from a Vendors' site to connect with other un-predefined network components or another peer Vendor's site will be blocked.

Static routing is applied for traffic between the Vendors' sites and the core network of HKEX. The core network routers never accept routing updates from the Vendor's site routers as no routing protocol is running at these WAN interfaces. Static routes are configured for Vendor's routers. Only routes to HKEX's host site networks are configured.

The network will ride on HKEX's Securities and Derivatives Network (SDNet/3) in the form of virtual private network. With the provision of private LAN (VLAN), only pre-defined network access points can communicate with each other.

Appendix A XML Schema for Message Validation

This is for reference only. The actual XML schema is to be delivered through email.

Appendix B Base64 Encoding and Decoding Algorithms

Base 64 encoding is defined in RFC 1521. The basic concept is described in the following.

The first 6 bits (bits 1-6) are read and then those 6 bits are mapped to 8 bits that correspond to visible ASCII characters. The next 6 bits (bits 7-12) are read and these are mapped to 8 bits using the same mapping procedure. The same mechanism is applied for the next 6 bits (bits 13-18) and again for the next 6 bits (bits 19-24). Once 4 sets of 6 bits (24 bits total) are read, another byte boundary is encountered.

The translation table is as follows:

| Input Ou | tput | Input O | utput | Input Ou | tput | Input | Output |
|----------|------|---------|-------|----------|------|--------|--------|
| 000000 | A | 010000 | Q | 100000 | g | 110000 | W |
| 000001 | В | 010001 | R | 100001 | h | 110001 | Х |
| 000010 | С | 010010 | S | 100010 | I | 110010 | У |
| 000011 | D | 010011 | Т | 100011 | j | 110011 | Z |
| 000100 | Ε | 010100 | U | 100100 | k | 110100 | 0 |
| 000101 | F | 010101 | V | 100101 | 1 | 110101 | 1 |
| 000110 | G | 010110 | W | 100110 | m | 110110 | 2 |
| 000111 | Н | 010111 | Х | 100111 | n | 110111 | 3 |
| 001000 | I | 011000 | Y | 101000 | 0 | 111000 | 4 |
| 001001 | J | 011001 | Z | 101001 | р | 111001 | 5 |
| 001010 | K | 011010 | а | 101010 | q | 111010 | 6 |
| 001011 | L | 011011 | b | 101011 | r | 111011 | 7 |
| 001100 | М | 011100 | С | 101100 | S | 111100 | 8 |
| 001101 | Ν | 011101 | d | 101101 | t | 111101 | 9 |
| 001110 | 0 | 011110 | е | 101110 | u | 111110 | + |
| 001111 | Ρ | 011111 | f | 101111 | V | 111111 | / |
| (pad) | = | | | | | | |

When decoding, white space should be ignored. A '=' represents that the encoded file has been padded. If the input file contains a character that is not listed in the table above, is not white space, and is not a '=', then there is an error.

For encoding used in IIS, three bytes of data are read from the input file and then they are encoded as four bytes. When the input file is not a multiple of 3 bytes in length, the following handlings should be followed.

If the input file is a multiple of 3 bytes in length.
 Then there is no problem. The last read from the file will be three bytes in length.
 First encoded byte: 1-6 bits of the input
 Second encoded byte: 7-12 bits of the input
 Third encoded byte: 13-18 bits of the input
 Fourth encoded byte: 19-24 bits of the input

2. If the input file is a multiple of 3 bytes in length plus one. The last read from the file will be one byte (8 bits) in length. First encoded byte: 1-6 bits of the input byte Second encoded byte: 7-8 bits of the input byte + "0000" Third encoded byte: '=' Fourth encoded byte: '='

3. If the input file is a multiple of 3 bytes in length plus two. The last read from the file will be two bytes (16 bits) in length. First encoded byte: 1-6 bits of the input byte Second encoded byte: 7-12 bits of the input Third encoded byte: 13-16 bits of the input + "00" Fourth encoded byte: '='

Appendix C Cryptography in IIS

ENCRYPTION AND DECRYPTION ALGORITHMS

The encryption and decryption algorithms being used in IIS are Triple-DES algorithm with Cyclic Block Chaining mode (3DES-CBC) and PKCS5 Padding.

For password processing, the Vendor terminal receives INITRESP message with session key which is encrypted by IIS symmetric key. The IIS symmetric key is distributed to each Vendor. Having got session key, the Vendor terminal sends encrypted password using session key in LOGONREQ message. The same mechanism is used for CHNGPWDREQ message for change of password.

The procedure to obtain plain text session key in INITREQ message is as follows.

- 1. Decode session key value using Base64 algorithm
- 2. Decrypt session key value using PK3
- 3. Encrypt session key value using PK2
- 4. Decrypt session key value using PK1

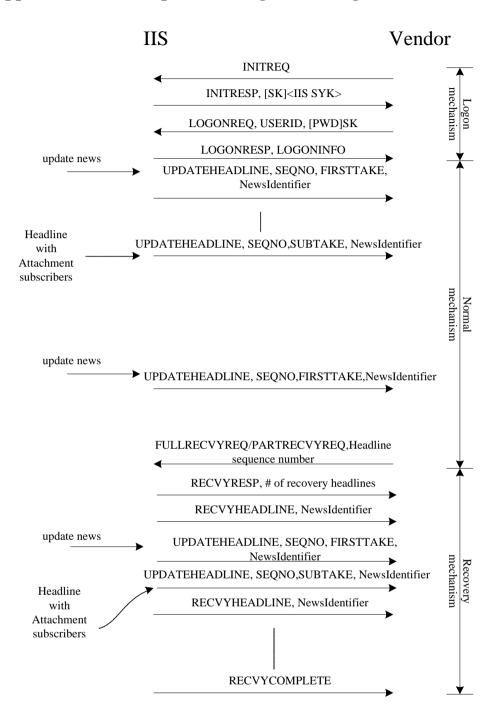

The procedure to create encrypted password in LOGONREQ and CHNGPWDREQ messages is in the following.

- 1. Encrypt password using PK1
- 2. Decrypt password using PK2
- 3. Encrypt password using plain text session key value obtained in the above steps

ATTACHMENT INTEGRITY USING MD5

The integrity of the attachment can be verified by calculating hash value of the received attachment using Message Digest 5 against the one coming with the associated headline. MD5 is a hashing algorithm that creates a 128-bit hash value. MD5 algorithm is described in RFC 1321 of IETF.

Appendix D An example of Message Flow Diagram

Appendix E Error Code Definition

| Error | Error code | Error Message |
|-------------------------|------------|---|
| INVALID_MESSAGE | 90001 | Invalid message format |
| PERMISSION_DROP | 90002 | Permission is revoked. |
| SESSION_NOT_ESTABLISHED | 90004 | Vendor haven't sign on |
| SERVICE_NOT_ALLOW | 90005 | No permission to request the service. |
| DUPLICATE_LOGON | 90006 | Vendor session had been established. |
| NEWS_NOT_FOUND | 90007 | No such headline or headline has been |
| | | housekept |
| ATTACHMENT_NOT_FOUND | 90008 | No such attachment |
| INCORRECT_VENDOR | 90010 | Incorrect Vendor identity or password |
| ATTACHMENT_NOT_READY | 90011 | The requested attachment is not available |
| | | for downloading |
| SERVICE_NOT_AVAILABLE | 90012 | Service is not available |
| INVALID_PASSWORD | 90013 | Invalid Password |
| SYSTEM BUSY | 90014 | System Busy |

Appendix F Subject Code and Scheme within Descriptive Metadata

There are different kinds of subject code comes within Descriptive Metadata which is identified by the scheme name. Scheme can be headline category, stock code, stock name, market code, expiry date, etc. The following table summarizes the possible types of scheme within subject code.

| Scheme | Description | |
|------------------------|---|--|
| Stock Code | Stock Code of the stock related to the news | |
| Stock Name | Stock Name of the stock related to the news | |
| | Notes: In NewsML, the Stock Name will be encoded in Base64 format For trading news, the stock name field will be empty | |
| Expiry Date | Expiry Date of the news | |
| Headline Category – T1 | Code of the News Category representing the Tier 1 announcement headlines – the most representative news category input by the listed issuer Notes: | |
| | For trading news and nasdaq, the Headline Category – T1 field will be empty | |
| Headline Category – T2 | Code of the announcement Category Code for the Tier 2 headlines in order of their importance. Tier 2 News Categories are other news category also covered by the News input by the listed issuer. | |
| Mkt Code | Market Code of the news | |

The following table summarizes the possible Market Code of the subject code with scheme **Mkt Code**. The maximum description length for Headline Category is 200 bytes.

Market Code (Scheme=Mkt Code)

| Market Code | Description |
|-------------|--|
| ALL | All markets |
| MAIN | Main Board |
| GEM | GEM Board |
| NASD | Nasdaq securities |
| ETS | Extended Trade Securities including "iShares" that is traded |
| | during lunch time |

Expiry Date (Scheme=Expiry Date)

| Format | Description | |
|----------|--------------------------|--|
| CCYYMMDD | Current News Expiry Date | |

Trading News Headline Category (Scheme=Headline Category-T1)*

| Tier 1 Headline Category | Chinese Description | Description |
|---------------------------------|----------------------------|-------------------------------------|
| EXN | 交易所訊息 | Trading News issued by the Exchange |

* Notes for Trading News Headline Category:

- The news will come with empty Tier 2 Headline Category. All associated Headline Category will be delivered as Tier 1 Headline Category.
- Tier 1 Headline Categories under Trading News Headline Category do not belong to the Headline Categories defined in the Listing Rules for issuer announcements.

Main Broad and GEM Broad Headline Category (defined in the Listing Rules)

| Tier 1 Headline Category Code | Tier 2 Headline Category Code | Description | Chinese Description |
|--|--|---|--------------------------------------|
| 10000 | - | Announcements and Notices | 公告及通告 |
| - | - | Connected Transactions | 關連交易 |
| 10000 | 11100 | Auditors or INEDs Unable to Confirm Matters relating to Continuing Connected Transaction | 核數師或獨立非執行董事未能確認有關持續關連交易的事宜 |
| 10000 | 11200 | Connected Transaction | 關連交易 |
| 10000 | 11300 | Continuing Connected Transaction | 持續關連交易 |
| 10000 | 11400 | Guaranteed Net Tangible Assets or Profits | 擔保有形資產淨值或溢利 |
| 10000 | 11500 | Waiver in respect of Connected Transaction Requirements | 就關連交易規定所授予的豁免 |
| - | - | Corporate Positions and Committees/Corporate Changes | 公司狀況變動及委員會/公司變動 |
| 10000 | 12050 | Change in Company Website | 更改公司網址 |
| 10000 | 12100 | Amendment of Constitutional Documents | 修訂憲章文件 |
| 10000 | 12150 | Change in Auditors | 更換核數師 |
| 10000 | 12200 | Change in Class Rights | 更改不同類別股份的權利 |
| 10000 | 12250 | Change in Compliance Adviser | 更換合規顧問 |
| 10000 | 12300 | Change in Compliance Officer | 更換監察主任 |
| 10000 | 12350 | Change in Directors or of Important Executive Functions or Responsibilities | 更換董事或重要行政職能或職責的變更 |
| 10000 | 12400 | Change in Financial Year End | 更改財政年度結算日期 |
| 10000 | 12450 ¹ | Change in Qualified Accountant (Before 1 January 2009) | 更換合資格會計師 (2009年1月1日前) |
| 10000 | 12500 | Change in Registered Address or Office, Registered Place of Business in HK or Agent for Service of Process in HK | 更改註冊地址或辦事處、香港業務的註冊地或香港接 收法律程序文件代表 |

Page 49 / 73

| 10000 | 12550 | Change in Company Secretary | 更換公司秘書 |
|-------|--------------------|--|-------------------------------------|
| 10000 | 12600 | Change in Supervisors | 更換監事 |
| 10000 | 12650 | Change of Audit Committee Member | 更換審核委員會成員 |
| 10000 | 12700 | Change of Company Name | 更改公司名稱 |
| 10000 | 12750 | Non-compliance with Audit Committee Requirements | 未能符合審核委員會的規定 |
| 10000 | 12800 | Non-compliance with Compliance Officer Requirements | 未能符合監察主任的規定 |
| 10000 | 12850 | Non-compliance with INED Requirements or INED Failing to Meet Independence Guidelines | 未能符合獨立非執行董事的規定或獨立非執行董事未 能符合獨立性指引 |
| 10000 | 12900 ¹ | Non-compliance with Qualified Accountant Requirements (Before 1 January 2009) | 未能符合合資格會計師的規定 (2009 年 1 月 1 日前) |
| 10000 | 12950 | Change in a Director's or Supervisor's Biographical Details | 董事或監事履歷詳情的變更 |
| 10000 | 12951 | Change in Chief Executive | 更換行政總裁 |
| 10000 | 12952 | List of Directors and their Role and Function | 董事名單和他們的地位和作用 |
| 10000 | 12953 | Non-compliance with Remuneration Committee Requirements | 未能符合薪酬委員會的規定 |
| 10000 | 12954 | Terms of Reference of the Audit Committee | 審核委員會的職權範圍 |
| 10000 | 12955 | Terms of Reference of the Nomination Committee | 提名委員會的職權範圍 |
| 10000 | 12956 | Terms of Reference of the Remuneration Committee | 薪酬委員會的職權範圍 |
| 10000 | 12957 | Change of Remuneration Committee Member | 更換薪酬委員會成員 |
| 10000 | 12958 | Terms of Reference of Other Board Committees | 其他董事會轄下之委員會的職權範圍 |
| 10000 | 12959 | Change in Share Registrar/Transfer Agent | 更換股份過戶登記處/登記代理 |
| - | - | Financial Information | 財務資料 |
| 10000 | 13100 | Advance to an Entity | 向實體提供墊款 |
| 10000 | 13150 | Date of Board Meeting | 董事會召開日期 |
| 10000 | 13200 | Delay in Results Announcement | 延遲發表業績公告 |
| 10000 | 13250 | Dividend or Distribution | 股息或分派 |

| 10000 | 13251 | Dividend or Distribution (Announcement Form) | 股息或分派(公告表格) |
|-------|-------------|---|---------------------|
| 10000 | 13300 | Final Results | 末期業績 |
| 10000 | 13350 | Financial Assistance and/or Guarantee to Affiliated Company | 向聯屬公司提供財務資助及/或作出擔保 |
| 10000 | 13400 | Interim Results | 中期業績 |
| 10000 | 13450 | Net Asset Value | 資產淨值 |
| 10000 | 13500 | Profit Warning | 盈利警告 |
| 10000 | 13550 | Modified Report by Auditors | 核數師發出「非標準報告」 |
| 10000 | 13600 | Quarterly Results | 季度業績 |
| 10000 | 13650 | Results of a Subsidiary | 附屬公司的業績 |
| 10000 | 13700 | Revision of Information in Published Preliminary Results | 修訂已刊發初步業績的資料 |
| 10000 | 13750 | Prior Period Adjustments due to Correction of Material Errors | 修正重大錯誤而作出的前期調整 |
| 10000 | 13800 | Revision of Published Financial Statements and Reports | 修改已刊發的財務報表及報告 |
| - | - | Meetings/Voting | 會議/表決 |
| 10000 | 14100 | Change of Voting Intention | 更改表決意向 |
| 10000 | 14200 | Material Information after Issue of Circular | 在發出通函後的重大資料 |
| 10000 | 14300 | Nomination of Director by Shareholder | 由股東提名董事 |
| 10000 | 14400 | Notice of AGM | 股東周年大會通告 |
| 10000 | 14500 | Notice of EGM/SGM | 股東特別大會通告 |
| 10000 | 14600 | Re-election or Appointment of Director subject to Shareholders' Approval | 在股東批准的情況下重選或委任董事 |
| 10000 | 14700 | Results of AGM | 股東周年大會的結果 |
| 10000 | 14800 | Results of EGM/SGM | 股東特別大會的結果 |
| | | | |
| 10000 | 14900^{1} | Results of Voting by Poll (Before 1 January 2009) | 投票表決的結果(2009年1月1日前) |

| - | - | New Listings (Listed Issuers/New Applicants) | 新上市(上市發行人/新申請人) |
|-------|-------|--|-------------------------|
| 10000 | 15100 | Allotment Results | 配發結果 |
| 10000 | 15200 | Formal Notice | 正式通告 |
| 10000 | 15300 | Listing of Securities by way of Introduction | 以介紹形式上市的證券 |
| 10000 | 15400 | Striking Price on Offer for Subscription or for Sale by Tender | 供認購或投標發售的行使價 |
| 10000 | 15500 | Supplemental Information regarding IPO | 有關首次公開招股的補充資料 |
| 10000 | 15600 | Transfer of listing from GEM to Main Board | 由GEM轉往主板上市 |
| 10000 | 15700 | Mixed Media Offer | 混合媒介要約 |
| - | - | Notifiable Transactions | 須予公布的交易 |
| 10000 | 16100 | Delay in Completion | 在完成須予公布的交易方面出現延誤 |
| 10000 | 16200 | Discloseable Transaction | 須予披露的交易 |
| 10000 | 16300 | Major Transaction | 主要交易 |
| 10000 | 16400 | Reverse Takeover | 反收購 |
| 10000 | 16500 | Share Transaction | 股份交易 |
| 10000 | 16600 | Termination of Transaction | 終止交易 |
| 10000 | 16700 | Variation to Terms | 條款上的更改 |
| 10000 | 16800 | Very Substantial Acquisition | 非常重大的收購事項 |
| 10000 | 16900 | Very Substantial Disposal | 非常重大的出售事項 |
| - | - | Reorganisation/Change in Shareholding/Major Changes/Public Float/Listing Status | 重組/股權變動/主要改動/公眾持股量/上市地位 |
| 10000 | 17100 | Announcement by Offeree Company under the Takeovers Code | 《收購守則》所指的受要約公司刊發的公告 |
| 10000 | 17150 | Announcement by Offeror Company under the Takeovers Code | 《收購守則》所指的要約公司刊發的公告 |
| 10000 | 17200 | Change in Shareholding | 股權出現變動 |
| 10000 | 17250 | Charging or Pledging of Shares by Shareholder | 股東抵押股份 |

| 10000 | 17300 | Concentration of Shareholdings | 股權集中 |
|-------|--------|--|---------------------------------|
| 10000 | 17350 | Dealing in Securities by Director where Otherwise Prohibited under Model Code | 董事於《標準守則》所載的禁售期內買賣證券 |
| 10000 | 174001 | Fundamental Change in Principal Business Activities (Before 1 January 2009) | 主要業務活動出現根本轉變 (2009年1月1日前) |
| 10000 | 17450 | Group Restructuring or Scheme of Arrangement | 集團重組或協議安排 |
| 10000 | 17500 | Lack of Open Market in Securities | 證券缺乏公開市場 |
| 10000 | 17550 | Listing on Overseas Exchange or Securities Market | 於海外交易所或證券市場上市 |
| 10000 | 17600 | Privatisation/Withdrawal or Cancellation of Listing of Securities | 私有化/撤銷或取消證券上市 |
| 10000 | 17650 | Resumption | 復牌 |
| 10000 | 17700 | Spin-off | 分拆 |
| 10000 | 17750 | Sufficiency of Assets and/or Operations and/or Issuer becoming Cash Company | 資產充足度及/或業務充足度及/或發行人成為現金資 產公司 |
| 10000 | 17800 | Sufficiency of Public Float | 公眾持股量充足度 |
| 10000 | 17850 | Suspension | |
| 10000 | 17900 | Winding Up and Liquidation of Issuer, its Holding Company or Major Subsidiary | 發行人、其控股公司或主要附屬公司結束營業及清盤 |

VERSION: 3.19

| 59000 ³ | - | Headline Category – Documents on Display (Structured Products) | 標題類別-展示文件(結構性產品) |
|--------------------|------|--|------------------|
| MISC | MISC | Miscellaneous | 雜項 |

¹ Headline ceased to be used since 1 January 2009
 ² Headline ceased to be used since 1 January 2013
 The code "MISC" under both Tier 1 and Tier 2 headline category does not belong to Headline Categories of issuer announcements defined in the Listing Rules.

³ IIS does not transmit Documents on Display, which is the same arrangement as these were in physical form.

Below is the example that illustrates the structure of <Descriptive Metadata> tag:

<DescriptiveMetadata> -<Language FormalName="[X]*" /> <SubjectCode> <!-- Announcement Category (Tier 1) of the news --> <SubjectMatter FormalName="11000" Scheme="Headline Category-T1"/> <!-- Announcement Category (Tier 2) of the news --> <SubjectMatter FormalName="13000" Scheme="Headline Category-T2"/> <SubjectMatter FormalName="12000" Scheme="Headline Category-T2"/> <SubjectMatter FormalName="14000" Scheme="Headline Category-T2"/> <!-- Market Code of the news --> <SubjectMatter FormalName="MAIN" Scheme="Mkt Code"/> <!-- Expiry Date of the news --> <SubjectMatter FormalName="20031203" Scheme="Expiry Date"/> <!-- Stock Information for first stock related to this news --> <SubjectMatter FormalName="00013" Scheme="Stock Code"/> <SubjectMatter FormalName="STOCK NAME FOR 00013" Scheme="Stock Name"/> <SubjectMatter FormalName="00383" Scheme="Stock Code"/> <SubjectMatter FormalName="STOCK NAME FOR 00383" Scheme="Stock Name"/>

</SubjectCode> </DescriptiveMetadata>

Appendix G MIME TYPE – FILE EXTENSION MAPPING

The mapping below allows the Vendors to find out the attachments file extension from a MIME TYPE. For an attachment without a specific MIME TYPE, a special MIME TYPE expressed as UNKNOWN/[file extension] will be used instead.

| МІМЕ ТҮРЕ | File Extension |

Appendix H Guideline on reading the IIS files provided under Contingency Arrangement

As described in Section 3.8, IIS Vendors will be provided with a download link for a file with all issuer documents stated at section Main Broad and GEM Broad Headline Category of appendix F released on the HKEXnews website on the failure day, together with a CSV mapping file, in case IIS has service disruption and cannot be resumed before mid-night of the failure day. Vendors should read this guideline for retrieving IIS news from the aforesaid file provided.

All news attachments will be stored under a folder in format yyyy\mmdd, where yyyymmdd is the release date for the news. If a news is on 12 Aug 2019, the folder name will be 2019\0812.

Essential news information associated with the attachment file will be provided in three separate CSV format files, which represent different tables containing different kinds of information, including

- i) News header information such as news attachment file names, market code, Expiry Date, etc.
- ii) Related stock codes information for each news found in the CSV file containing News header information
- iii) Tier-2 codes information for each news found in the CSV file containing News header information.

Details of the three CSV files will be listed below:

• CSV file for News Header Table (example file name: 20190812_news_hdr.csv)

It stores news information with associated attachment file name. The filename will be in format "*yyyymmdd_news_hdr.csv*". The key is the "NewsItemId". Detail of the file structure is listed below:

| Field Name | Example | Description | Corresponding element in NewsML message |
|------------------|--------------------------------|---|--|
| News Datetime | 141603 | News release datetime | |
| NewsItemId | 3280470 | News ID | <newsitemid></newsitemid> |
| FileName | 0812\GLN20190812 9974_C.XLS | Full path and File name of the attachment. | |
| | | Table of content of multiple file if "Is Multiple File" = 1 | |
| Language | zh-hk | Language of a news | FormalName value in <language></language> |
| | | Remark: News headline and attachments are in Unicode | |
| Market Code | GEM | Market Code | FormalName value for Scheme "Mkt Code" in <subjectmatter></subjectmatter> |
| Expiry Date | 20190812 | Expiry Date of news | FormalName value for Scheme "Expiry Date" in <subjectmatter></subjectmatter> |
| Cancel Date | | Present: This news is a canceled news | Type = "CANCELLED" in <updateheadline></updateheadline> |
| | | Blank: Normal news | |
| Amend Date | | Present: This news is an amended news if the "Cancel Date" is blank | Type = "AMENDED" in <updateheadline></updateheadline> |

| Update Date | | Present: | Type = "UPDATED" in |
|---------------|--|--|--|
| opulie Dule | | The news is updated | <pre><updateheadline></updateheadline></pre> |
| | | | |
| | | Blank: | |
| | | The news is not updated | |
| Delete Date | | Present: | Type = "DELETED" in |
| | | The news is deleted | <updateheadline></updateheadline> |
| | | | |
| | | Blank: | |
| | | The news is not deleted | |
| Is Multiple | 0 | 0: News not contain multiple file | |
| File | | | |
| | | 1: News contain multiple file | |
| Multiple File | | Full path to store multiple files. | |
| Path | | | |
| | | Blank if "Is Multiple File" = 0 | |
| Multiple File | | Corresponding multiple file | |
| Name | | name in the directory stored in | |
| | | "Multiple File Path", separated | |
| | | by ";". | |
| | | $\mathbf{D}_{i} = \mathbf{D}_{i} = \mathbf{D}_{i}$ | |
| Headline | 10000 | Blank if "Is Multiple File" = 0 | FormalName value for |
| Category-T1 | 10000 | Headline Category Tier 1 Code | Scheme "Headline |
| Category-11 | | | Category-T1" in |
| | | | <subjectmatter></subjectmatter> |
| Headline | 10000,<08008><080 | News Title | <headlines> without</headlines> |
| Treatime | 01><08009>- | | Base64 encoding |
| | 10000[14700,11300, | | Duscor encounig |
| | | | |
| | - (| | |
| | 10000[14700,11300, 18300](CM- A50053415) | | |

• CSV file for News Stock Table (example file name: 20190812_news_stock_info.csv)

It stores the related stock codes and related stock names associated with the news. For news with multiple stock codes/names, there will be multiple rows in the CSV file with same "NewsItemId". The filename will be in format "*yyyymmdd_news_stock_info.csv*". The key is the "NewsItemId". Detail of the CSV file structure is listed below:

| Field Name | Example | Description | Corresponding element in NewsML message |
|------------|-------------------|-------------|---|
| NewsItemId | 3280507 | News ID | <newsitemid></newsitemid> |
| Stock Code | 3358 | Stock Code | FormalName value for Scheme "Stock Code" in <subjectmatter></subjectmatter> |
| Stock Name | BESTWAY GLOBAL | Stock Name | FormalName value for Scheme "Stock Name" in < <u>SubjectMatter</u> > without Base64 encoding |

• CSV file for News Tier 2 Table (example file name: 20190812_news_tier2.csv)

It stores the Tier 2 codes associated with the news. For news with multiple Tier 2 code, there will be multiple rows in the CSV file with same "NewsItemId". The filename will be in format

"*yyyymmdd_*news_tier2.csv". The key is the "NewsItemId". Detail of the CSV file structure is listed below:

| Field Name | Example | Description | Corresponding element in NewsML message |
|-------------|---------|-------------------------------|---|
| NewsItemId | 3280446 | News ID | <newsitemid></newsitemid> |
| Headline | 11100 | Headline Category Tier 2 Code | FormalName value for |
| Category-T2 | | | Scheme "Headline |
| | | | Category-T2" in |
| | | | <subjectmatter></subjectmatter> |

By using the news information stored in the three CSV files to find out the news headline information, including the News ID, News Release Datetime, News Attachment File Location and File Names, News Language, Market Code, News Expiry Date, Related Stock Code & Stock Names, Headline Category Tier-2 Code, Headline Category Tier-1 code, News Title, etc, as listed in the above 3 tables, vendor can locate the corresponding attachment files from the file folder containing all news attachment files. The key "NewsItemId" is used to link up all related records in the three CSV files.

If the field "Is Multiple File" in the CSV file for News Header Table is equal to 1, it indicates that the news contains multiple attachment files. Vendor should use the field "Multiple File Path" and "Multiple File Name" in the same CSV file to retrieve the multiple attachment files stored in the specified path "Multiple File Path". The multiple file names are stored in field "Multiple File Name" with separator ";".

Handling of the news

Normal News

There will be 1 record in the "News Header Table" with same news title. Vendors expected to use the "NewsItemId" to find the related Tier2 code and stock code in the "News Stock Table" and "News Tier 2 Table"

Normal News without stock code (Dummy Stock Code)

There will be 1 record in the "News Header Table" with same news title. Vendor expected to use the "NewsItemId" to find the related Tier2 code and stock code in the "News Stock Table" and "News Tier 2 Table". Stock code "999999" is used to indicate it is a dummy stock code.

Cancel News

There will be 1 record in the "News Header Table" with same news title and news cancel date time in field "Cancel Date". Vendor can ignore this cancel news.

Cancel a hold up original news

There will be 1 record in the "News Header Table" with same news title and news cancel date time in field "Cancel Date". Vendor can ignore this cancel news.

News Amendment

1. Amendment of previous news released on the same date

There will be two records in the News Header Table - Cancelled News and Amended News with same news title.

Cancelled News: News with "Cancel Date" filled with news cancelled date/time and "Amend Date" filled with amended date/time. As this news is cancelled, Vendor can ignore this cancel news.

Amended News: News with "Amend Date" filled with amended date/time. Vendor should to use the "NewsItemId" key to find the related Tier2 codes and stock codes in the CSV for "News Stock Table" and "News Tier 2 Table"

2. Amendment of previous news released on previous date (Original news released at least 1 day before the amended news)

There will be one record in the News Header Table - Amended News

Amended News: News with "Amend Date" filled with amended date/time. Vendor should to use the "NewsItemId" key to find the related Tier2 codes and stock codes in the CSV for "News Stock Table" and "News Tier 2 Table"

Update News

There will be 1 record in the "News Header Table" with same news title. Vendor should expect such news contains the updated expiry date and/or stock information.

Delete News

There will be 1 record in the "News Header Table" with same news title and news delete date in field "Delete Date". Vendor can ignore this delete news.
