## DOCUMENT HISTORY

Document Version	Date	Change Description				
1.0	30 Jul 2012	First issue				
1.1	31 Oct 2012	<p>Section 2.1.1, 2.2.1 – include Broker Queue (54) message in Securities Level 2 Conflated Channels</p> <p>Section 2.1.2, 2.2.2 – remove News (22) from Securities Status Channel</p> <p>Section 2.2.1 – update the correct Line A multicast IP address for Securities Status Channel</p> <p>Section 2 – add some descriptive reference on network connection to OMD</p> <p>Section 3 &amp; 4 – add some guidelines on SDNet lines or HSN connection, e.g. estimated bandwidth requirements, sharing of SDNet/2 or HSN, additional RTS login ID/IP address for Retransmission etc</p>				
1.2	7 Mar 2013	<p>Section 2 – (i) add description on the requirement of the interface of the LAN switch to set speed as “auto-sense” and duplex mode as “auto-sense” and “auto-negotiation”; (ii) update the sample connection diagram for the LAN switch and the link between routers A &amp; B; (iii) add note not to subscribe to multicast addresses &amp; port IDs not specified in the Connectivity Guide.</p> <p>Section 2.1.7 – update the production IP Unicast Address in the table</p> <p>Section 2.2 – update the section heading</p> <p>Appendix B – update the Client Sample Configuration Sheet to include the sample connection diagram &amp; clarify on the setup</p>				
1.3	24 May 2013	<p>Section 1 – added overview for OCG End-to-End Test Environment</p> <p>Section 2.3 – newly added for OCG End-to-End Test Environment Connectivity Details</p> <p>Section 2.4 (previously 2.3) and Section 3.2 – amended for above</p> <p>Section 4.1 - clarify the policy on usage of login ID for retransmission service</p>				
1.4	5 Aug 2015	<table border="1"> <thead> <tr> <th>Effective Date</th> <th>Changes</th> </tr> </thead> <tbody> <tr> <td>Q3 2016</td> <td> <p><b>Introduction of Closing Auction Session (CAS) &amp; Volatility Control Mechanism (VCM)</b></p> <p>Section 2.1, 2.2, 2.3 – added new messages VCM Trigger (23), Reference Price (43) and Order Imbalance (56) for SS, SP &amp; SF</p> </td> </tr> </tbody> </table>	Effective Date	Changes	Q3 2016	<p><b>Introduction of Closing Auction Session (CAS) &amp; Volatility Control Mechanism (VCM)</b></p> <p>Section 2.1, 2.2, 2.3 – added new messages VCM Trigger (23), Reference Price (43) and Order Imbalance (56) for SS, SP &amp; SF</p>
Effective Date	Changes					
Q3 2016	<p><b>Introduction of Closing Auction Session (CAS) &amp; Volatility Control Mechanism (VCM)</b></p> <p>Section 2.1, 2.2, 2.3 – added new messages VCM Trigger (23), Reference Price (43) and Order Imbalance (56) for SS, SP &amp; SF</p>					
1.5	15 Dec 2015	<table border="1"> <thead> <tr> <th>Effective Date</th> <th>Changes</th> </tr> </thead> <tbody> <tr> <td>Now</td> <td> <p><b>Update of Information</b></p> <ul style="list-style-type: none"> <li>Appendix A – SDNet/2 Accredited Vendors Information</li> </ul> </td> </tr> </tbody> </table>	Effective Date	Changes	Now	<p><b>Update of Information</b></p> <ul style="list-style-type: none"> <li>Appendix A – SDNet/2 Accredited Vendors Information</li> </ul>
Effective Date	Changes					
Now	<p><b>Update of Information</b></p> <ul style="list-style-type: none"> <li>Appendix A – SDNet/2 Accredited Vendors Information</li> </ul>					

1.6	19 Feb 2016	<b>Effective Date</b>	<b>Changes</b>
		Q2 2016	<b>Introduction of a new Disaster Recovery (DR) mechanism</b> <ul style="list-style-type: none"> <li>Section 2 (across sub-sections) – Add information on the new dedicated channel for the new Disaster Recovery Signal (105) message</li> </ul>
		Now	<b>Update of Information</b> <ul style="list-style-type: none"> <li>Section 3.3 and Section 3.4 – Remove MDF3.8 related information</li> </ul>
1.7	4 Aug 2016	<b>Effective Date</b>	<b>Changes</b>
		29 Aug 2016	<b>Launch of new Indices</b> <ul style="list-style-type: none"> <li>Section 2.1.4, 2.2.4 and 2.3.4 – Add TR Index Channel</li> </ul>
1.8	03 Feb 2017	<b>Effective Date</b>	<b>Changes</b>
		Q2 2017	<b>Launch of Stock Connect Market Feed</b> <ul style="list-style-type: none"> <li>Section 2.1.7, 2.2.7 and 2.3.7 – Add Stock Connect Daily Quota Balance and Stock Connect Market Turnover Channels</li> <li>Section 3.2 – Add bandwidth requirement for Datafeed with Stock Connect Market Feed (SCM)</li> </ul>

### 1. Overview

This document aims to provide network configuration information and guidance to assist information vendors and end-users (“clients”) in setting up their networks for making connection to testing and production environments for OMD Securities Market and Index Datafeed Products (OMD-C).

OMD-C is available in two testing environments to serve different purposes:

- i. Open/Readiness Test Environment is provided for clients to perform Open Test and Readiness Test on OMD-C so as to enable them to fully test the functional and technical capability of their OMD-C feed handler.
- ii. OCG End-to-End Test Environment is provided for Exchange Participants (EPs) to perform the End-to-End Test on the HKEX Orion Central Gateway (OCG). OMD-C is available in this testing environment to facilitate loop test (input order and receive market data) by OCG EPs who plan to receive market data via direct connection to OMD-C.

This document contains:

- Configuration information, i.e. IP addresses of the channels assigned for each of the OMD-C datafeed products in OMD-C Production environment and Open/Readiness Test environment as well as the OCG End-to-End Test Environment
- Guidelines / policies for SDNet/2 and HSN connection

## 2. Configuration Information

OMD adopts multicast transmission protocol for real-time data transmission with retransmission recovery service running on Unicast. Clients are required to set correct network configurations in order to establish proper connection to the corresponding OMD multicast server and retransmission server. Below is a sample connection diagram which provides an overview of SDNet/2 network connection to OMD for reference.

For OMD connection via SDNet/2, a client system has to set up routing to the HKEX host subnets as the diagram depicted. To receive multicast stream, IGMP version 2 is employed at the SDNet/2 routers to query the multicast groups which the client system subscribes. The client system should enable the IGMP function and issue join messages to the SDNet/2 routers for the entitled multicast groups.

For OMD connection by co-location at HKEX Host Data Centre (HDC), clients are required to provide their own routers to connect to the HKEX network. The protocols used in HDC network are BGP4 and Multicast PIM sparse mode. For details, please refer to the Interface Specification on Connectivity Services and Timing Service of HKEX Hosting or contact HKEX Hosting Services team via email [hostingservices@hkex.com.hk](mailto:hostingservices@hkex.com.hk).

Since the physical speed of an SDNet/2 circuit is 1Gbps, therefore, the interface of a client end LAN switch and client end servers have to be 1Gbps in order to prevent packet drops of multicast packet burst. To connect with SDNet/2 routers, interface of the LAN switch should be configured with speed as "auto-sense" and duplex mode as "auto-sense" and "auto-negotiation". Then, when the link comes up, the corresponding interface of the LAN switch should learn 1Gbps and full duplex.

## Securities Market & Index Datafeed Products (OMD-C)

---

The client systems are required to subscribe to the multicast addresses and port IDs for the subscribed OMD products according to multicast channel subscriptions as listed in Section 2.1 for production environment or as listed in Section 2.2 for Open/Readiness Test environment. Clients should not subscribe to other multicast addresses and port IDs not specified in this Connectivity Guide or else it could result in receiving non-OMD packets. Clients should ignore any multicast packets outside the channels subscribed to.

The following 3 subsections 2.1, 2.2 and 2.3 provide connection details of the OMD-C Production Environment, OMD-C Open/Readiness Test environment and the OCG End-to-End Test Environment respectively.

2.1 Production Environment Connectivity Details

### 2.3.8 HKEX OMD Retransmission Unicast Connectivity

HKEX provides a Retransmission Service to its OMD clients to recover multicast packet loss. Functional details of the Retransmission Service are provided in the Interface Specification. The Unicast Addresses to connect to the OMD Retransmission Servers in **OCG End-to-End Test Environment** will be provided later when individual client configuration information is provided prior to the End-to-End test.

### 2.4 Individual Client Configuration Details

Individual clients will be provided with the following configuration details for each set of product feed subscription:

- One Retransmission User ID (Username)
- The subnet and subnet mask of the client segment
- Two unicast client allowable IP addresses for connection with re-transmission servers<sup>1</sup>
- Two physical IP addresses and two Virtual IP address of SDNet/2 routers<sup>2</sup>
- HSRP/VRRP groups used by SDNet/2 routers

Individual client testing configuration information will be provided separately prior to the Open Test/Readiness Test or OCG End-to-End Test whilst the client specific production configuration information will be provided upon the client's successful completion of the Readiness Test and prior to the Market Rehearsals/Post Release Test. Please refer to Appendix B for an example of Client Configuration information.

---

<sup>1</sup> Only one unicast client allowable IP addresses for connection with re-transmission servers will be assigned for clients connecting to the OCG End-to-End Test environment

<sup>2</sup> Only one physical IP addresses and one Virtual IP address of SDNet/2 routers will be assigned for clients connecting to the OCG End-to-End Test environment

### 3. Guidelines on SDNet/2 lines / HSN connection

#### 3.1 Mode of OMD connection

- For resilience purpose, at least 2 SDNet/2 or HSN lines are required for OMD connection either for individual OMD datafeed product or sharing among different OMD datafeed products.
- The set of 2 SDNet/2 lines is required to locate in the same location. If clients require receiving OMD data in multiple locations, 1 set of 2 SDNet/2 lines are required to install in each location.

#### 3.2 Bandwidth Requirement

Full suite of OMD-C datafeed products and respective estimated bandwidth requirements are as follows.

##### 3.2.1 Production SDNet/2 / HSN and Testing SDNet/2 / HSN for Open Test / Readiness Test

Datafeed plus add-ons	Alone	With Odd Lot Order (OLO)	With Conflated Broker Queue (CBQ)	With Index Feed (Index)*	With Stock Connect Market Feed (SCM)	SDNet/2 High Performance Option**
<b>Securities Standard (SS)</b>	10 Mbps	10 Mbps	N/A	10 Mbps	10 Mbps	Not necessarily required
<b>Securities Premium (SP)</b>	30 Mbps	30 Mbps	40 Mbps	40 Mbps	30 Mbps	Required
<b>Securities FullTick (SF)</b>	30 Mbps	30 Mbps	30 Mbps	30 Mbps	30 Mbps	Required

\* Update rates of individual indices depend on respective index providers.

\*\* High Performance Option of SDNet/2 line is required for streaming feeds.

##### 3.2.2 Testing SDNet/2 / HSN for OCG End-to-End Test

Datafeed plus add-ons	Alone	With Odd Lot Order (OLO)	With Conflated Broker Queue (CBQ)	With Index Feed (Index)	With Stock Connect Market Feed (SCM)	SDNet/2 High Performance Option**
<b>Securities Standard (SS)</b>	2 Mbps	2 Mbps	N/A	2 Mbps	2 Mbps	Not necessarily required
<b>Securities Premium (SP)</b>	2 Mbps	2 Mbps	2 Mbps	2 Mbps	2 Mbps	Not necessarily required
<b>Securities FullTick (SF)</b>	2 Mbps	2 Mbps	2 Mbps	2 Mbps	2 Mbps	Not necessarily required

\*\* High Performance Option of SDNet/2 line is NOT required for OCG End-to-End Test.

OCG EPs sourcing market data via direct connection to OMD-C have to successfully complete the OMD-C Readiness Test conducted in the OMD-C Open/Readiness Test environment.

### 3.3 Sharing of SDNet/2 lines or HSN port set

Clients may opt to use separated sets or same set of SDNet/2 lines/ HSN ports for receiving data of different OMD datafeed products but clients should note the following policies on sharing of SDNet/2 for OMD datafeed products:

- Sharing of same set of production SDNet/2 circuits for **more than one OMD datafeed products across different markets** (i.e. securities market datafeed and derivatives market datafeed) **is allowed**.
- Sharing of the same SDNet/2 / HSN circuits for both product and testing purposes is **NOT ALLOWED**.
- **Exchange Participants** who would like to **share the same SDNet/2 circuits with trading traffic (orders and trades) and market data traffic** are however **only** allowed to do so if all the traffic **on** the circuits belongs to **the same market** (i.e. either securities market or derivatives market). OMD-Index, which is market neutral, can be carried on the same circuits with securities market or derivatives market. For example, Exchange Participants of cash market may use the same SDNet/2 circuits for their access to OMD-C SS, OMD-Index and OCG<sup>3</sup>.
- Clients should note and consider the followings if they are going to adopt shared line mode:
  - i) In case of failure/interruption of the shared circuits, all datafeed products using this set of circuits will be affected.
  - ii) Troubleshooting for network related issues (e.g. performance, latency or packet loss etc.) will be much more difficult and time consuming and assistance from network carriers and HKEX will be limited in such troubleshooting. Clients must accept this risk in making the line sharing decision.
  - iii) Due to the difference in operating hours and testing windows between securities and derivatives markets, clients should make sure any maintenance/testing of one of the systems does not affect the rest of the systems sharing the same set of circuits.

### 3.4 Bandwidth for shared SDNet/2 lines or HSN port set

- i) Shared SDNet/2 / HSN circuits must have sufficient bandwidth to support the data transmission of multiple products/devices. Please see below examples for reference:

Example 1: Sharing of a set of SDNet/2 lines for OMD SP and OMD SF:-

The estimated bandwidth requirements for SP and SF are 30 Mbps each (with no optional feed), a set of SDNet/2 lines with 60Mbps will be required.

- ii) Clients can allocate bandwidth of the shared lines to different products as they wish as long as the bandwidth allocated to each datafeed product meets the estimated bandwidth requirement specified by HKEX.

---

<sup>3</sup> Should OCG Exchange Participants wish to share the same set of OMD-C SDNet lines with their OCG connection, they should refer to the Connectivity Guide of HKEX Orion Central Gateway Platform for the details of the relevant SDNet lines sharing arrangement.

### **3.5 SDNet/2 High Performance Option**

High Performance Option of SDNet/2 lines which transmits data in relatively higher packet rates is highly recommended for clients who subscribe to OMD streaming feeds, i.e. SP and SF,. Please refer to Appendix A for details on high performance options provided by different SDNet/2 providers.

## 4. Other Guidelines on OMD Connections

---

### 4.1 Additional Login IDs/Client IP addresses for Unicast Retransmission Service

Direct connection clients will get one set of login ID with two IP addresses for retransmission service per OMD-C datafeed subscription. That means, clients subscribing to one set of SP feed and one set of SF feed will get two login IDs each with two IP addresses. These login IDs would be generic ID where each ID can be used to recover either the SP and SF missing data rather than tied to the respective datafeed product associated with that login ID provided that the same pair of SDNet/2 or HSN circuits is used for receiving the data from both SP and SF.

Exchange Participants who are entitled to receive two sets of complimentary SS feed via two different pairs of circuits when migrating to OCG would also be entitled to one complimentary login ID per set of SS feed which is also a generic ID.

To facilitate different clients' internal setup or operational requirement, an additional set of login ID and with/without IP addresses for retransmission service can be offered to clients at a cost on a per request basis.

---

### 4.2 Installation of SDNet/2 and HSN lines

---

#### 4.2.1 SDNet/2 lines

Clients are required to contact the SDNet/2 Accredited Vendors for installation of SDNet/2 lines for OMD connection. Details of the SDNet/2 Accredited Vendors and reference costs charged by different SDNet/2 Accredited Vendors can be found in Appendix A.

---

#### 4.2.2 HSN lines

Clients who will use HKEX's Hosting Service for OMD connection should contact our Hosting Service team directly for details on the HSN lines.

### Appendix A – SDNet/2 Accredited Vendors Information

SDNet/2 services are provided by Accredited Vendors for the provision of circuits from EP/CP/IV locations to HKEX's data centres.

To become an Accredited Vendor, the Vendor's SDNet/2 service must comply with the technical requirements set out by HKEX. The compliance of these technical requirements ensures the Accredited Vendor will deliver a stable, reliable and high quality networking services to the EPs/CPs/IVs.

Three Accredited Vendors have been selected and accredited to provide SDNet/2 network services. These vendors are (in alphabetical order):

- Hong Kong Telecommunications (HKT) Limited (also known as PCCW)
- Hutchison Global Communications Limited (HGC)
- Wharf T&T Limited (Wharf T&T)

For details of SDNet/2 circuit price information / technical specification / service level, please refer to [Price Information / Technical Specification / Service Level of SDNet/2](#) posted on HKEX website.

**Appendix B – Sample Client Configuration Information**

**Client End Network Information (Sample):**

1	Username	<i>CLIENT1</i>
2	OMD LAN Subnet	<i>10.55.64.0</i>
3	OMD LAN Subnet Mask	<i>255.255.255.224</i>
4	Vendor Allowable IP Address 1 for retransmission	<i>10.55.64.2</i>
5	Vendor Allowable IP Address 2 for retransmission	<i>10.55.64.29</i>
6	SDNet/2 Primary Circuit Number	<i>808311</i>
7	SDNet/2 Router A LAN IP Address (IP-A)	<i>10.55.64.14</i>
8	SDNet/2 Secondary Circuit Number	<i>808312</i>
9	SDNet/2 Router B LAN IP Address (IP-B)	<i>10.55.64.17</i>
10	SDNet/2 OMD LAN 1 <sup>st</sup> Virtual Gateway IP Address (Virt-A)	<i>10.55.64.1</i>
11	HSRP/VRRP Group Number used by SDNet/2 Router for Virt-A	<i>14</i>
